Course Name: Mathematics-I
Course Code: M 101
Contact: 3:1:0
Total contact Hours: 48
Credit: 4
Prerequisite:
The students to whom this course will be offered must have the concept of (10+2) standard matrix algebra and calculus.
Course Outcomes (COs):
On successful completion of the learning sessions of the course, the learner will be able to:
CO1: Recall the distinctive characteristics of matrix algebra and calculus.
CO2: Understand the theoretical working of matrix algebra and calculus.
CO3: Apply the principles of matrix algebra and calculus to address problems in their disciplines.
CO4: Examine the nature of system using the concept of matrix algebra and calculus.

Course Content:

Module I: Matrix Algebra (11)
Echelon form and Normal (Canonical) form of a matrix; Inverse and rank of a matrix; Consistency and inconsistency of system of linear equations, Solution of system of linear equations; Eigenvalues and eigenvectors; Diagonalization of matrices; Cayley-Hamilton theorem.

Module II: Differential Calculus and Infinite Series (10)
Rolle's Theorem, Mean value theorems, Taylor's and Maclaurin theorems with remainders; Concept of sequence and series, Tests for convergence of infinite series: Comparison test, D'Alembert's ratio test, Raabe's test, Cauchy's root test, Power series; Taylor's series, Series for exponential, trigonometric and logarithm functions.

Module III: Multivariable Calculus (Differentiation) - I (9)
Function of several variables, Concept of limit, continuity and differentiability; Partial derivatives, Total derivative and its application; Chain rules, Derivatives of implicit functions Euler's theorem on homogeneous function, Jacobian.

Module IV: Multivariable Calculus (Differentiation) - II (7)
Maxima and minima of functions of two variables, Method of Lagrange multipliers; Directional derivatives, Gradient, Divergence, Curl.

Module V: Integral Calculus (11)
Evolutes and involutes; Evaluation of definite integrals and its applications to evaluate surface areas and volumes of revolutions; Improper integrals; Beta and Gamma functions and their properties.

Course Name: Chemistry
Course Code: CH 101
Contact: 3:0:0
Total Contact Hours: 36
Credits: 3

Prerequisite: A basic knowledge in 10+2 science with chemistry

Course Outcome:
After the completion of the course the students will be able to:
CO1: remember fundamental concepts of Chemistry and define relevant terminologies.
CO2: understand the principles of thermodynamics, spectroscopy and related physical properties of molecules.
CO3: apply the basic concept of Organic Chemistry and knowledge of chemical reactions to industries and technical fields.
CO4: analyze and explain protective measures of corrosion of metals in the industries.
CO5: assess theoretical and practical aspects relating to the transfer of the production of chemical products from laboratories to the industrial scale, in accordance with environmental considerations.

Course Content: 9

Module-I: Inorganic Chemistry
Atomic structure (5 Lectures)
Bohr's theory to hydrogen-like atoms and ions; spectrum of hydrogen atom. Quantum numbers, Introduction to the concept of atomic orbitals, diagrams of s, p and d orbitals, Pauli's exclusion principle, Hund's rule, exchange energy, Aufbau principle and its limitation, introduction to Schrodinger equation.
Periodic properties (4 Lectures)
Modern Periodic table, group trends and periodic trends in physical properties: electron affinity, electronegativity, polarizability, oxidation states, effective nuclear charges, penetration of orbitals, variations of s, p and d orbital energies of atoms.

Module-II: Physical Chemistry **8**
Use of free energy in chemical equilibria (6 lectures)
Thermodynamic functions: internal energy, enthalpy, entropy and free energy. 2nd Law of Thermodynamics, Estimations of entropy and free energies, Free energy and emf, Cell potentials, the Nernst equation and applications.
Real Gases (2 lectures)
Reason for deviation of real gases from ideal behaviour, Equations of state of real gases, Vander Waals' equation, pressure & volume correction, validity, critical state of gas.

Module III: Organic Chemistry **8**
Stereochemistry (4 lectures)
Representations of 3 dimensional structures, Chirality, optical activity, isomerism, structural isomerism, stereoisomers, enantiomers, diastereomers, configurations (D,L & cis trans), racemisation.
Organic reactions (4 lectures)
Concepts of inductive effect, resonance, hyperconjugation, introduction to reactions involving substitution, addition, elimination, oxidation (Baeyer villiger oxidation), reduction (Clemmensen

reduction, Wolff-Kishner reduction)

Module IV: Industrial Chemistry **8**

Water (2 lectures)
Hardness, alkalinity, numerical
Corrosion. (2 lectures)
Types of corrosion: wet & dry, preventive measures
Polymers (3 lectures)
Classification of polymers, conducting polymers, biodegradable polymers
Synthesis of a commonly used drug molecule. (1 lecture)
Paracetamol, Aspirin

Module V: Spectroscopic techniques in Chemistry **3**

Electromagnetic radiation, Principles of spectroscopy, spectrophotometer, infrared spectroscopy, fingerprint region, functional group region, UV-VIS spectroscopy, 1H Nuclear magnetic resonance spectroscopy, chemical shift

Text Books
1.A Text Book of Organic Chemistry, Arun Bahl & Arun Bahl
2.General & Inorganic Chemistry, P.K. Dutt

CO5	2	-	-	-	-	-	2	-	-	-	-	1	1	2

Course Name: Basic Electrical Engineering
Course Code: EE101
Contact: 3:0:0
Total Contact Hours: 36
Credits: 3

Pre-requisite:
Basic 12th standard Physics and Mathematics, Concept of components of electric circuit.
Course Outcome:
Course Outcome: After completion of the course students able to
CO1: Understand Basic Electrical circuits, Power distribution and Safety measures.
CO2: Analyze an apply DC network theorems.

CO3: Analyze and apply concept of AC circuits of single-phase and three-phase.
CO4: Understand basic principles of Transformers and Rotating Machines.

Course Content:

ModuleI: DC Circuits (9L)

Definition of electric circuit, linear circuit, non-linear circuit, bilateral circuit, unilateral circuit, Dependent source, node, branch, active and passive elements, Kirchhoff's laws, Source equivalence and conversion, Network Theorems - Superposition Theorem, Thevenin's Theorem, Norton Theorem, Maximum Power Transfer Theorem, Star-Delta Conversions.

ModuleII: AC Fundamentals (9L)

Sinusoidal quantities, Average and RMS values, peak factor, Form factor, Phase and Phase difference, concept of phasor diagram, V-I Relationship in R, L, C circuit, Combination R-L-C in series and parallel circuits with phasor diagrams, impedance and admittance, impedance triangle and power triangle, Power factor, concept of resonance, Power in AC circuit, simple problems (series and parallel circuit only), Three-phase balanced circuits, Concept of three-phase power measurement.

Module III: Single-Phase Transformer(5L)

Brief idea on constructional parts, classifications, working principle. Problems on EMF equation. Phasor diagram, Equivalent circuit.

ModuleIV: Electrical Rotating Machines(8L)

DC Machines (4L)

Brief idea on constructional features, classifications, working principle of both motor and generator. Simple problems on Voltageequation.

Three-Phase Induction Motor (4L)

Basic concept of three phase circuit and production of rotating magnetic field. Working principle of three-phase induction motor and torque-speed characteristics (concept only). No numerical problem.

ModuleV: General Structure of Electrical Power System(1L)

Power generation to distribution through overhead lines and underground cables with single line diagram.

ModuleVI: Electrical Installations(4L)

Earthing of Electrical Equipment, ideas of basic components- MCB, MCCB, ELCB, SFU, Megger.

Textbooks:

D. P. Kothari & I. J. Nagrath, Basic Electrical Engineering, TMH.

Course Name: ENGLISH
Course Code: HU 101
Contact: 2:0:0
Total Contact Hours: 24
Credits: 2

Prerequisite: The course presupposes a high school level knowledge of English grammar, punctuation, and elementary to intermediate reading and writing skills.

Course Outcome:

Course Outcomes: By pursuing this course the students shall be able to:
CO1: Know about and employ communication in a globalized workplace scenario.
CO2: Understand and apply functional grammar, reading skills and sub-skills.
CO3: Acquire a working knowledge of writing strategies, formats and templates of professional writing.
CO4: Apply and make use of the modalities of intercultural communication.

Course Content:

Module 1: Communication in a Globalized World **4L**
Definition, Process, Types of Communication
Verbal and Non-Verbal Communication
Barriers to Communication
Workplace Communication

Module 2: Functional Grammar **4L**
2.1Articles, Prepositions and Verbs
2.2 Verb-Subject Agreement
2.3 Voice, Modality and Modifiers
2.4 Direct and Indirect Speech
2.5 Common Errors in English

Module 3: Vocabulary and Reading **6L**
3.1 Word Roots, Prefixes and Suffixes
3.2 Antonyms, Synonyms and one word Substitution
3.3 Reading—Purposes and Skills (Skimming, Scanning & Intensive Reading)
3.4 Reading Comprehension (Fictional and Non-fictional prose)

Module 4: Professional Writing **10L**
4.1Writing Functions: Describing, Defining, Classifying
4.2 Structuring—coherence and clarity
4.3 Business Writing—Letters (Enquiry, Order, Sales, Complaint, Adjustment, Job Application letters), Memos, Notices, Circulars, Agendas and Minutes of Meetings).
4.4 E-mails—types, conventions, jargons and modalities.
4.5 Reports and Proposals
4.6 Précis writing
4.7 Essay writing
4.8 Punctuation and its importance in writing
4.9 Writing for an Audience

Text Books:
1.Ruskin Bond: The Night Train at Deoli
2.Khushwant Singh: The Portrait of a Lady
2.Roald Dahl: Lamb to the Slaughter
3.Somerset Maugham: The Man with the Scar

4.Anne Frank: The Diary of a Young Girl (Letters of 3rd February 1944, 12th February 1944 and 13th February 1944)
5.Jawaharlal Nehru: "How Britain Ruled India" (Glimpses of World History, Chap 112)

Reference Books:
1.Raymond Murphy. *English Grammar in Use*. 3rd Edn. CUP, 2001.
2. A. J Thomson and A. V. Martinet. *A Practical English Grammar* Oxford: OUP, 1980.

Course Name: Chemistry Lab
Course Code: CH 191
Contact: 0:0:3
Total Contact Hours: 24
Credits: 1.5

Prerequisite:10+2 science with chemistry

Course Outcome
After completion of the course students able to:

CO1: operate different types of instruments for estimation of small quantities chemicals used in industries and scientific and technical fields.
CO2: work as an individual also as a team member
CO3: analyse different parameters of water considering environmental issues
CO4: synthesize nano and polymer materials.
CO5: design innovative experiments applying the fundamentals of chemistry

List of Experiments: 9

To determine the alkalinity in given water sample.
Redox titration (estimation of iron using permanganometry)
To determine calcium and magnesium hardness of a given water sample separately.
Preparation of phenol-formaldehyde resin (Bakelite).
Heterogeneous equilibrium (determination of partition coefficient of acetic acid between n- butanol and water).
Conductometric titration for determination of the strength of a given HCl solution by titration against a standard NaOH solution.
pH- metric titration for determination of strength of a given HCl solution against a standard NaOH solution.

Determination of dissolved oxygen present in a given water sample.
To determine chloride ion in a given water sample by Argentometric method (using chromate indicator solution).
Innovative experiment: Preparation of silver nano-particles.

Course Name: Basic Electrical Engineering Lab
Course Code: EE191
Contact: 0:0:3
Credits: 1.5

Pre requisite:
Basic Physics and applied physics, Basic Mathematics, Basic concept of Electric Circuit.

Course Outcome:

After completion of the course students able to:

CO1. Identify and use common electrical components.
CO2. Develop electrical networks by physical connection of various components and analyse the circuit behaviour.
CO3. Apply and analyse the operational characteristics of electrical machines.
CO4. Apply and analyse the equivalent parameters, Losses, efficiency of transformers

List of Experiments:

1. Basic safety precautions – earthing, introduction to measuring instruments – Voltmeter, Ammeter, Multimeter, Wattmeter, Real life Resistor, Capacitor, Inductor.
2. Verification of Thevenin's and Norton's Theorem.
3. Verification of Superposition and Maximum Power Transfer Theorem.
4. Characteristics of Fluorescent, Tungsten and Carbon filament lamps.
5. Study of R-L-C series circuit.
6. Three-phase Power measurement with two wattmeter rmethod.
7. Demonstration of cut-out sections of machines: DC Machine (commutator-brush arrangement), Induction Machine (squirrel cagerotor).
8. Measurement of primary and secondary voltage and current of single-phase transformer – Open Circuit and Short Circuit Test.
9. Starting, Reversing and speed control of DC shunt motor.
10. Torque-Speed characteristics of DC Machine.
11. Torque-Speed characteristics of Three-phase Induction Motor.
12. Test on single-phase Energy Meter.
13. Innovative experiments

Course Name: Engineering Graphics & Design
Course Code: ME 191
Contact: 0:0:3
Credits: 1.5
Prerequisite: Basic knowledge of geometry

Course Outcomes (COs):
On successful completion of the learning sessions of the course, the learner will be able to:
CO1: Learn basics of drafting and use of drafting tools which develops the fundamental skills of industrial drawings.
CO2: Know about engineering scales, dimensioning and various geometric curves necessary to understand design of machine elements.
CO3: Understand projection of line, surface and solids to create the knowledge base of orthographic and isometric view of structures and machine parts.
CO4: Become familiar with computer aided drafting useful to share the design model to different section of industries as well as for research & development.

List of Drawing:
Traditional Engineering Graphics:
Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Module 1: Introduction to Engineering Drawing
Principles of Engineering Graphics and their significance, Usage of Drawing instruments, lettering, Conic sections including Rectangular Hyperbola (General method only); Cycloid, Epicycloid and Involute; Scales

– Plain, Diagonal and Vernier Scales.

Module 2: Orthographic & Isometric Projections
Principles of Orthographic Projections-Conventions - Projections of Points and lines inclined to both planes; Projections of planes inclined Planes - Auxiliary Planes; Projection of Solids inclined to both the Planes- Auxiliary Views; Isometric Scale, Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa.

Module 3: Sections and Sectional Views of Right Angular Solids
Drawing sectional views of solids for Prism, Cylinder, Pyramid, Cone and project the true shape of the sectioned surface, Auxiliary Views; Development of surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone; Draw sectional orthographic views of objects from industry and dwellings (foundation to slab only)
Computer Graphics:
Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modeling; Solid Modeling.

Module 4: Overview of Computer Graphics
Demonstration of CAD software [The Menu System, Toolbars (Standard, Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), Zooming methods, Select and erase objects].

Module 5: CAD Drawing, Customization, Annotations, layering
Set up of drawing page including scale settings, ISO and ANSI standards for dimensioning and tolerancing; Using various methods to draw straight lines, circles, applying dimensions and annotations to drawings; Setting up and use of Layers, Changing line lengths (extend/lengthen); Printing documents; Drawing sectional views of solids and project the true shape of the sectioned surface; Drawing annotation, CAD modeling of parts and assemblies with animation, Parametric and non parametric solid, surface and wireframe modeling, Part editing and two dimensional documentation of models.

Module 6:
Demonstration of a simple team design project
Illustrating Geometry and topology of engineered components: creation of engineering models and their presentation in standard 2D blueprint form and as 3D wire-frame and shaded solids; Meshed topologies for engineering analysis and tool-path generation for component manufacture, Use of solid-modeling software for creating associative models at the component and assembly levels.

Innovative activities to be evaluated by the Programme Head/ Event coordinator based on the viva voce and submission of necessary certificates as evidence of activities.

Course Name: Mathematics - II
Course Code: M 201
Contact: 3:1:0
Total Contact Hours: 48
Credits: 4

Prerequisite:
The students to whom this course will be offered must have the concept of (10+2) standard calculus.
Course Outcome:
On successful completion of the learning sessions of the course, the learner will be able to:
CO1: Recall the distinctive characteristics of matrix algebra and calculus.
CO2: Understand the theoretical working of matrix algebra and calculus.
CO3: Apply the principles of matrix algebra and calculus to address problems in their disciplines.
CO4: **Examine the nature of system using the concept of matrix algebra and calculus.**

Course Content:
Module I: Multivariable Calculus (Integration): (12 Lectures)
Double integration, Change of order of integration in double integrals, Triple integrals, vector line integrals, scalar surface integrals, vector surface integrals, Green's theorem, Gauss divergence theorem and Stokes' theorem.
Module II: First Order Ordinary Differential Equations (ODE): (10 Lectures)
Solution of first order and first degree ODE: Exact ODE, Rules for finding Integrating factors, Linear ODE, Bernoulli's equation, Solution of first order and higher degree ODE: solvable for p, solvable for y solvable for x and Clairaut's equation.
Module III: Second Order Ordinary Differential Equations (ODE): (12 Lectures)
Solution of second order ODE with constant coefficients: C.F. & P.I., Method of variation of parameters, Cauchy-Euler equations, Reduction of 2nd order ODE to a pair of first order ODEs, Solution of simultaneous linear ODEs.

Module IV: Laplace Transform (LT): (14 Lectures)
Definition and existence of LT, LT of elementary functions, First and second shifting properties, Change of scale property, LT of $t\,f\,(t)$, LT of $\frac{f\,(t)}{t}$, LT of derivatives of f (t), LT of $\int f(t)dt$, Evaluation of improper integrals using LT, LT of periodic and step functions, Inverse LT: Definition and its properties, Convolution theorem (statement only) and its application to the evaluation of inverse LT, Solution of linear ODE with constant coefficients (initial value problem) using LT.

Course Name: Physics –I
Course Code: PH 201
Contact: 3:0:0
Total Contact Hours: 36
Credits: 3

Pre requisite: Knowledge of Physics up to 12th standard.

Course Outcome
At the end of the course students should be able to

Course Outcome
CO1: Describe various types mechanical resonance and its electrical equivalence

CO2: Explain basic principles of Laser, Optical fibers and various types of semiconductors

CO3: Apply superposition to explain interference and diffraction as well as apply wave mechanics for attainment of Heisenberg's uncertainty principle

CO4: Analyze importance of light as a carrier of information and examine different crystallographic structures according to their co-ordination number and packing factors

CO5: Justify the need of quantum mechanics as remedy to overcome limitations imposed by classical physics

Course Content:
Module 1: Waves & Oscillations (6L)
Simple Harmonic Motion (only preliminary idea), damped harmonic motion-over damped, critically damped and under damped motion, energy decay, logarithmic decrement, force vibration and resonance (amplitude, velocity resonance), sharpness of resonance, quality factor, related numerical problems. 6L

Module 2: Classical Optics (8L)
Interference of light: Huygens's principle, superposition of waves,conditions of sustained interference, Newton's ring (qualitative descriptions of working principles and procedures-no deduction required). Engineering applications, Numerical Problems. 3
Diffraction of light: Fresnel and Fraunhofer class, Fraunhoffer diffraction of a single slit, multiple slits, intensity distributions, missing order, Rayleigh criterion (no deduction) and resolving power of grating and microscope (no deduction), related numerical problems. 5L

Module 3: Quantum Mechanics-I (8L)
Quantum Theory: Inadequacy of classical physics and its modifications by Planck's quantum hypothesis-qualitative (no deductions), particle concept of electromagnetic wave (example: photoelectric and Compton Effect; no derivation required, origin of modified and unmodified lines), wave particle duality; phase velocity and group velocity; de Broglie hypothesis; Davisson and Germer experiment. 4L
Quantum Mechanics 1: Concept of wave function, physical significance of wave function, probability interpretation; normalization of wave functions; uncertainty principle, relevant numerical problems.

4L

Module 4: Solid State Physics-I (7L)

Crystal Structure: Structure of solids, amorphous and crystalline solids (definition and examples), lattice, basis, unit cell, Fundamental types of lattices –Bravais lattice, simple cubic, fcc and bcc lattices, Miller indices and miller planes, co-ordination number and atomic packing factor, Bragg's equation, applications, numerical problems.

4L

Semiconductor: Physics of semiconductors, electrons and holes, metal, insulator and semiconductor, intrinsic and extrinsic semiconductor, p-n junction. 3L

Module 5 : Modern Optics-I (7L)

Laser: Concepts of various emission and absorption process, Einstein A and B coefficients and equations, working principle of laser, metastable state, population inversion, condition necessary for active laser action, optical resonator, illustrations of Ruby laser, He-Ne laser, Semiconductor laser, applications of laser.

5L

Fibre optics-Principle and propagation of light in optical fibres- Numerical aperture and Acceptance angle, Numerical problems. 2L

Text Books:

Course Name: Basic Electronics Engineering
Course Code: EC 201
Contact: 3:0:0
Total Contact Hours: 36
Credits: 3

Prerequisite: A basic course in Electronics and Communication Engineering Progresses from the fundamentals of electricity, direct current (DC) devices and circuits, series and parallel circuits to the study of active and passive components, Ohm's Law, Kirchhoff's Law i.e. KVL, KCL, Ampere's Law etc.

Course Outcome:
After the completion of this course the students will be able to:

CO1: Understand the PN junction diode, ideal diode, diode models and its circuit analysis, Remember the application of diodes and special diodes.

CO2: Analyse how operational amplifiers are modelled and analysed, and to design Op-Amp circuits to perform operations such as integration differentiation on electronic signals.
CO3: Assess both positive and negative feedback in electronic circuits.
CO4: Develop the capability to analyse and design simple circuits containing non-liner elements such as transistors using the concepts of load lines, operating points and incremental analysis.

Course Content:

Module-I: Basics of semiconductor **5**
Conductors, Insulators, and Semiconductors- crystal structure, Fermi Dirac function, Fermi level, E-k and Energy band diagrams, valence band, conduction band, and band gap; intrinsic, and extrinsic (p-type and n-type) semiconductors, position of Fermi level in intrinsic and extrinsic semiconductor, drift and diffusion current – expression only (no derivation) , mass action law , charge neutrality in semiconductor, Einstein relationship in semiconductor , Numerical problems on- Fermi level, conductivity, mass action law, drift and diffusion current .

Module-II: P-N Junction Diode and its applications **7**

P-N junction formation and depletion region , energy band diagram of p-n junction at equilibrium and barrier energy , built in potential at p-n junction , energy band diagram and current through p-n junction at forward and reverse bias, V-I characteristics and current expression of diode , temperature dependencies of V-I characteristics of diode , p-n junction breakdown – conditions , avalanche and Zener breakdown , Concept of Junction capacitance, Zener diode and characteristics.

Diode half wave and full wave rectifiers circuits and operation (I_{DC} , I_{rms} , V_{DC} , V_{rms}, ripple factor without filter, efficiency ,PIV,TUF; Reduction of ac ripples using filter circuit (Qualitative analysis); Design of diode clipper and clamper circuit - explanation with example, application of Zener diode in regulator circuit. Numerical problems

8

Module III: Bipolar Junction Transistor:

Formation of PNP/NPN Transistors, energy band diagram, current conduction mechanism, CE, CB, CC configurations, transistor static characteristics in CE, CB and CC mode, junction biasing condition for active, saturation and cut-off modes, current gain α, β and γ, early effect.

Biasing and bias stability; biasing circuits - fixed bias; voltage divider bias; collector to base bias, D.C. load line and Quiescent point, calculation of stability factors for different biasing circuits.

BJT as an amplifier and as a switch – Graphical analysis; Numerical Problems.

Module IV: Field Effect Transistors: **6**

Concept of field effect, channel width modulation Classification of FETs-JFET, MOSFET, operating principle of JFET. drain and transfer characteristics of JFET (n-channel and p-channel), CS,CG,CD configurations, Relation between JFET parameters. FET as an amplifier and as a switch– graphical analysis. E-MOSFET (n-channel and p-channel), D-MOSFET (n-channel and p-channel), Numerical Problems

Module V: Feedback and Operational Amplifier **8**

Concept of feedback with block diagram, positive and negative feedback, gain with feedback. Feedback topologies, effect of feedback on input and output impedance, distortion, concept of oscillation and Barkhausen criterion.

Operational amplifier – electrical equivalent circuit ,ideal characteristics , Non ideal characteristics of op- amp – offset voltages ;bias current ;offset current; Slew rate ; CMRR and bandwidth, Configuration of inverting and non-inverting amplifier using Op-amp, closed loop voltage gain of inverting and non-inverting amplifier , Concept of virtual ground, Applications op-amp – summing amplifier; differential amplifier; voltage follower ; basic differentiator and integrator .

Problems on Characteristics of Op-amp, CMRR, slew rate, amplifier and application of Op-amp to be discussed. Any other relevant problems related to topic may be discussed or assigned.

Module-VI: Cathode Ray Oscilloscope (CRO) **2**

Operating principle of CRO with block diagram, measurement of voltage, frequency and phase.

Text Books:

Course Name: Programming for Problem Solving
Course Code: CS 201
Contact: 3:0:0
Total Contact Hours: 36
Credits: 3
Prerequisite: **Number system, Boolean algebra**
Course Outcome:
On completion of the course students will be able to:
CO1 : Understand and differentiate among different programming languages for problem solving.
CO2 : Describe the way of execution and debug programs in C language.
CO3 : Define, select, and compare data types, loops, functions to solve mathematical and scientific problem
CO4 : Understand the dynamic behaviour of memory by the use of pointers.
CO5 : Design and develop modular programs using control structure, selection structure and file.

Course Content:
Module I: Fundamentals of Computer: (8 L)
History of Computer, Generation of Computer, Classification of Computers, Basic structure of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices 3L
Binary and Allied number systems representation of signed & unsigned numbers, BCD, ASCII, Binary number Arithmetic – Addition and Subtraction (using 1's complement and 2's complement) 2L
Overview of Procedural vs Structural language, compiler and assembler (basic concepts) 1L
Problem solving-Algorithm & flow chart 2L
Module II: C Fundamentals: (28 L)
Variable and Data Types: The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements 2L
C Operators & Expressions: Arithmetic operators, relational operators, logical operators, increment and decrement operators, bitwise operators, assignment operators, conditional operators, special operators - type conversion, C expressions, precedence and associativity. 3L
Input and Output: Standard input and output, formatted output - printf, formatted input scanf, bit fields. 1L
Branching and Loop Statements: Statement and blocks, if - else, switch, goto and labels, Loops - while, for, do while, break and continue 4L
Fundamentals and Program Structures: auto, external, static and register variables Functions, function types, function prototypes, functions returning values, functions not returning values, scope rules, recursion, C preprocessor and macro 5L
Arrays, Strings and Pointers: One dimensional arrays, Two-dimensional arrays, Multidimensional arrays. Passing an array to a function Character array and string, array of strings, Passing a string to a function, String related functions, Pointers, Pointer and Array, Pointer and String, Pointer and functions, Dynamic memory allocation 7L
Structures and Unions: Basic of structures, arrays of structures, structures and pointers, structures and functions 3L
Files handling with C: Formatted and unformatted files, Command line arguments, fopen, fclose, fgetc, fputc, fprintf,

fscanf function 3L

Course Name: Engineering Mechanics
Course Code: ME 201
Contacts: 3:0:0
Total Contact Hours: 36
Credits: 3
Prerequisite: Basic Concept of Physics

Course Outcomes (COs):

On successful completion of the learning sessions of the course, the learner will be able to:

CO1: Know about thermodynamic equilibrium, heat & work transfer, First law and its application.
CO2: Understand the basic concepts of Heat Engine, Entropy from Second law of thermodynamics.
CO 3: Know the thermodynamic characteristics of a pure substance and its application in power cycles (Simple Rankine Cycles, Air Standard cycles)
CO4: Knowledge of basic principles of fluid mechanics, and ability to analyze fluid flow problems with the Application of the momentum and energy equations

Course Content:

Module 1: Introduction to Engineering Mechanics: Force Systems Basic concepts, Particle equilibrium in 2-D & 3-D; Rigid Body equilibrium; System of Forces, Coplanar Concurrent Forces, Components in Space – Resultant-Moment of Forces and its Application; Couples and Resultant of Force System, Equilibrium of System of Forces, Free body diagrams, Equations of Equilibrium of Coplanar Systems and Spatial Systems; Static Indeterminacy. 6L

Module 2: Friction: Types of friction, Limiting friction, Laws of Friction, Static and Dynamic Friction; Motion of Bodies, wedge friction, screw jack & differential screw jack. 2L

Module 3: Basic Structural Analysis: Equilibrium in three dimensions; Method of Sections; Method of Joints; How to determine if a member is in tension or compression; Simple Trusses; Zero force members; Beams & types of beams; Frames & Machines. 3L

Module 4: Centroid and Centre of Gravity: Centroid of simple figures from first principle, centroid of composite

sections; Centre of Gravity and its implications; Area moment of inertia- Definition, Moment of inertia of plane sections from first principles, Theorems of moment of inertia, Moment of inertia of standard sections and composite sections; Mass moment inertia of circular plate, Cylinder, Cone, Sphere, Hook.

5L

Module 5: Virtual Work and Energy Method: Virtual displacements, principle of virtual work for particle and ideal system of rigid bodies, degrees of freedom. Active force diagram, systems with friction, mechanical efficiency. Conservative forces and potential energy (elastic and gravitational), energy equation for equilibrium. Applications of energy method for equilibrium. Stability of equilibrium.

5L

Module 6: Review of particle dynamics: Rectilinear motion; Plane curvilinear motion (rectangular, path, and polar coordinates). 3-D curvilinear motion; Relative and constrained motion; Newton's 2nd law (rectangular, path, and polar coordinates). Work-kinetic energy, power, potential energy. Impulse-momentum (linear, angular); Impact (Direct and oblique). 5L

Module 7: Introduction to Kinetics of Rigid Bodies: Basic terms, general principles in dynamics; Types of motion, Instantaneous centre of rotation in plane motion and simple problems; D'Alembert's principle and its applications in plane motion and connected bodies; Work energy principle and its application in plane motion of connected bodies; Kinetics of rigid body rotation. 5L

Module8: Mechanical Vibrations: Basic terminology, free and forced vibrations, resonance and its effects; Degree of freedom; Derivation for frequency and amplitude of free vibrations without damping and single degree of freedom system, simple problems, types of pendulum, use of simple, compound and torsion pendulums.

5L

Course Name: Programming for Problem Solving Lab
Course Code: CS 291
Contact: 0:0:3
Credits: 1.5

Prerequisites: **Number system, Boolean Algebra**
Course Outcomes (COs):

On successful completion of the learning sessions of the course, the learner will be able to:

CO1: Gain basic knowledge of Workshop Practice and Safety useful for our daily living.

CO2: Identify Instruments of a pattern shop like Hand Saw, Jack Plain, Chisels etc and performing operations like such as Marking, Cutting etc used in manufacturing processes.

CO 3: Gain knowledge of the various operations in the Fitting Shop using Hack Saw, various files, Scriber, etc to understand the concept of tolerances applicable in all kind of manufacturing.

CO4: Get hands on practice of in Welding and various machining processes which give a lot of confidence to manufacture physical prototypes in project works.

List of Experiments:

1. Some basic commands of DOS, Windows and Linux Operating System, File handling and Directory structures, file permissions, creating and editing simple C program, compilation and execution of C program.
2. Writing C Programs on variable, expression, operator and type-casting.
3. Writing C Programs using different structures of if-else statement and switch-case statement.
4. Writing C Programs demonstrating use of loop (for loop, while loop and do-while loop) concept and use of break and continue statement.
5. Writing C Programs demonstrating concept of Single & Multidimensional arrays.
6. Writing C Programs demonstrating concept of Function and Recursion.
7. Writing C Programs demonstrating concept of Pointers, address of operator, declaring pointers and operations on pointers.
8. Writing C Programs demonstrating concept of structures, union and pointer to structure.
9. Writing C Programs demonstrating concept of String and command line arguments.
10. Writing C Programs demonstrating concept of dynamic memory allocation.
11. Writing C Programs demonstrating concept of File Programming.
12. Innovative Experiment

Course Name: Physics-I Lab
Course Code: PH 291
Contact: 0:0:3
Credits: 1.5

Prerequisite: Basic knowledge of 10+2

Course Outcome:
After the completion of the course the students will able to:

CO1 : Demonstrate experiments allied to their theoretical concepts
CO2 : Conduct experiments using LASER, Optical fiber, Torsional pendulum, Spctrometer
CO3 : Participate as an individual, and as a member or leader in groups in laboratory sessions actively
CO4 : Analyze experimental data from graphical representations , and to communicate effectively them in Laboratory reports including innovative experiments

List of Experiment:

General idea about Measurements and Errors (One Mandatory):
i) Error estimation using Slide calipers/ Screw-gauge/travelling microscope for one experiment.
ii) Proportional error calculation using Carrey Foster Bridge.

Any 7 to be performed from the following experiments

Experiments on Oscillations& Elasticity:
1. Study of Torsional oscillation of Torsional pendulum & determination of time period using various load of the oscillator.
2. Experiments on Lissajous figure (using CRO).
3. Experiments on LCR circuit.
4. Determination of elastic modulii of different materials (Young's modulus and Rigidity modulus)

Experiments on Optics:
5. Determination of wavelength of light by Newton's ring method.
6. Determination of wavelength of light by Laser diffraction method.
7. Determination of numerical aperture and the energy losses related to optical fiber experiment
8. Measurement of specific rotation of an optically active solution by polarimeter.

Experiments on Quantum Physics:
9. Determination of Planck's constant using photoelectric cell.
10. Verification of Bohr's atomic orbital theory through Frank-Hertz experiment.

In addition it is **recommended that each student should carry out at least one experiment beyond the syllabus/one experiment as Innovative experiment.

Beyond syllabus experiments:
1. Determination of wavelength of light by Fresnel's bi-prism method (beyond the syllabus).
2. Study of half-wave, quarter-wave plate (beyond the syllabus)
3. Study of dispersive power of material of a prism.
4. Study of viscosity using Poyseullie's caplillary flow method/using Stoke's law.
5. Measurement of nodal and antinodal points along transmission wire and measurement of wave length.
6. Any other experiment related to the theory.
7. Innovative Experiment

CO-PO-PSO Mapping: (DETAILED; HIGH:3; MEDIUM:2; LOW:1**):**

Course Name: Basic Electronics Engineering Lab
Course Code: EC 291
Contact: 0:0:3
Credits: 1.5

Prerequisite: A basic course in electronics and Communication engineering Progresses from the fundamentals of electricity, active and passive components, basic electronics laws like Ohm's law, Ampere's law

Course Outcome:
After the completion of the course the students will be able to:

CO1: Knowledge of Electronic components such as Resistors, Capacitors, Diodes, Transistors measuring equipment like DC power supply, Multimeter, CRO, Signal generator, DC power supply.

CO2: Analyse the characteristics of Junction Diode, Zener Diode, BJT & FET and different types of Rectifier Circuits.

CO3: Determination of input-offset voltage, input bias current and Slew rate, Common- mode Rejection ratio, Bandwidth and Off-set null of OPAMPs.

CO4: Able to know the application of Diode, BJT & OPAMP.

List of Experiment:

1. Familiarization with passive and active electronic components such as Resistors, Inductors, Capacitors, Diodes, Transistors (BJT) and electronic equipment like DC power supplies, millimeters etc.
2. Familiarization with measuring and testing equipment like CRO, Signal generators etc.
3. Study of I-V characteristics of Junction diodes.
4. Study of I-V characteristics of Zener diodes.
5. Study of Half and Full wave rectifiers with Regulation and Ripple factors.
6. Study of I-V characteristics of BJTs.
7. Study of I-V characteristics of Field Effect Transistors.
8. Determination of input-offset voltage, input bias current and Slew rate of OPAMPs.
9. Determination of Common-mode Rejection ratio, Bandwidth and Off-set null of OPAMPs.
10. Study of OPAMP circuits: Inverting and Non-inverting amplifiers, Adders, Integrators and Differentiators.
11. Study of Logic Gates and realization of Boolean functions using Logic Gates.
12. Study of Characteristic curves for CB, CE and CC mode transistors.
13. Innovative Experiments

Course Name: Workshop/Manufacturing Practices
Course Code: ME 292
Contact: 0:0:3
Credits: 1.5

Prerequisite: Higher Secondary with Mathematics, Physics and Chemistry

Course Outcomes (COs):

On successful completion of the learning sessions of the course, the learner will be able to:

CO1: Gain basic knowledge of Workshop Practice and Safety useful for our daily living.

CO2: Identify Instruments of a pattern shop like Hand Saw, Jack Plain, Chisels etc and performing operations like such as Marking, Cutting etc used in manufacturing processes.

CO 3: Gain knowledge of the various operations in the Fitting Shop using Hack Saw, various files, Scriber, etc to understand the concept of tolerances applicable in all kind of manufacturing.

CO4: Get hands on practice of in Welding and various machining processes which give a lot of confidence to manufacture physical prototypes in project works.

Course Content:

(i) Theoretical discussion & videos: (6P)

Detailed contents:

1. Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods
2. Fitting operations & power tools
3. Carpentry
4. Welding (arc welding & gas welding), brazing
5. Electrical & Electronics
6. Metal casting
7. CNC machining, Additive manufacturing
8. Plastic moulding& Glass Cutting.

(ii) Workshop Practice:

Module 1 - Machine shop (6P)

Typical jobs that may be made in this practice module:

i. To make a pin from a mild steel rod in a lathe.

ii. To make rectangular and vee slot in a block of cast iron or mild steel in a shaping and / or milling machine.

Module 2 - Fitting shop (6P)

Typical jobs that may be made in this practice module:

i. To make a Gauge from MS plate.

Module 3 - Carpentry (6P)

Typical jobs that may be made in this practice module:

i. To make wooden joints and/or a pattern or like.

Module 4 - Welding shop (Arc welding 3P + gas welding 3P) (6P)

Typical jobs that may be made in this practice module:

i. ARC WELDING (3P): To join two thick (approx 5mm) MS plates by manual metal arcwelding.

ii. GAS WELDING (3P): To join two thin mild steel plates or sheets by gas welding.

Module 5 - Electrical & Electronics (3P)

House wiring, soft Soldering

Module 6 - Smithy (3P)

Typical jobs that may be made in this practice module:

i. A simple job of making a square rod from a round bar or like.

Innovative Experiments:

Module 7 - Casting

Typical jobs that may be made in this practice module:

One/ two green sand moulds to prepare, and a casting be demonstrated.

Module 8 - Plastic moulding & Glass Cutting

Typical jobs that may be made in this practice module:

i. For plastic moulding, making at least one simple plastic component should be made.

ii. At least one sample shape on glass should be made using laser cutting machine.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

Course Name: Language Lab
Course Code: HU 291
Contact: 0:0:2
Credit: 1

Pre requisite: Basic knowledge of LSRW skills

Course Outcome:
CO1: Able to understand advanced skills of Technical Communication in English through Language Laboratory.
CO2: Able to apply listening, speaking, reading and writing skills in societal and professional life.
CO3: Able to demonstrate the skills necessary to be a competent Interpersonal communicator.
CO4: Able to analyze communication behaviours.
CO5: Able to adapt to multifarious socio-economical and professional arenas with the help of effective communication and interpersonal skills.
Course Content:

Module 1: Introduction to the Language Lab
a. The Need for a Language Laboratory
b. Tasks in the Lab
c. Writing a Laboratory Note Book
Module 2: Active Listening
a. What is Active Listening?
b. Listening Sub-Skills—Predicting, Clarifying, Inferencing, Evaluating, Note-taking
c. Academic Listening vs Business Listening
d. Listening in Business Telephony
e. Study of Contextualized Examples based on Lab Recordings
Module 3: Speaking
a. Speaking—Accuracy and Fluency Parameters
b. Pronunciation Guide—Basics of Sound Scripting, Stress and Intonation
c. Fluency-focussed activities—JAM, Conversational Role Plays, Speaking using Picture/Audio Visual inputs
d. Accuracy-focussed activities—Identifying Minimal Pairs, Sound Mazes, Open and Closed Pair Drilling, Student Recordings (using software)
e. Group Discussion: Principles and Practice
Module 4: Lab Project Work
a. Making a brief Animation film with voice over (5 minutes)OR
b. Making a brief Documentary film (10 minutes)

Prerequisite:
The students to whom this course will be offered must have the concept of (10+2) standard calculus, basic probability and differential equations.
Course Objectives:
The objective of this course is to disseminate the prospective engineers with advanced techniques for solving ordinary differential equations and basic techniques for solving partial differential equations. It also aims to equip the students with concepts and tools of calculus of complex variables, Fourier series and Fourier transform, and probability distribution as an intermediate to the advanced level of applications that they would find useful in their disciplines.
Course Outcomes (COs):
On successful completion of the learning sessions of the course, the learner will be able to:
On successful completion of the learning sessions of the course, the learner will be able to:

CO1: **Recall** the underlying principle and properties of Fourier series, Fourier transform, probability distribution of a random variable, calculus of complex variable, partial differential equation and ordinary differential equation.
CO2: **Exemplify** the variables, functions, probability distribution and differential equations and find their distinctive measures using the underlying concept of Fourier series, Fourier transform, probability distribution of a random variable, calculus of complex variable, partial differential equation and ordinary differential equation.
CO3: Apply Cauchy's integral theorem and the residue theorem to find the value of complex integration, and compute the probability of real world uncertain phenomena by indentifying probability distribution that fits the phenomena.
CO4: **Solve** partial differential equation using method of separation of variables and ordinary differential equation using techniques of series solution and special function (Legendre's and Bessel's)
CO5: **Find** the Fourier series and Fourier transform of functions by organizing understandings of underlying principles and also evaluate the integral using Parseval's identity.

Course Content:
MODULE I:
Fourier series and Fourier Transform: (13 Lectures)
Fourier series: Dirichlet's Conditions; Euler's Formula for Fourier Series; Fourier Series for functions of period 2π; Sum of Fourier series (examples); Theorem for the convergence of Fourier series (statement only); Fourier series of a function with its periodic extension; Half range Fourier series: Construction of half range Sine series and half range Cosine Series; Parseval's identity (statement only) and related problems.
Fourier Transform: Fourier Transform, Fourier Cosine Transforms, Fourier Sine Transforms (problems only); Properties of Fourier Transform: Linearity, Shifting, Change of Scale, Modulation (problems only); Fourier Transform of Derivatives (problems only); Convolution Theorem (statement only), Inverse of Fourier Transform (problems only).
MODULE II:
Probability Distributions: (11 Lectures)
Random Variable: Discrete and Continuous (definition & examples); Probability Distribution (definition & examples); Probability Mass Function, Probability Density Functionand Distribution Function for a single random variable only (definition, properties & related problems); Expectation, Varianceand Standard Deviation for a single random variable only (definition, properties & related problems); Binomial Distribution, Poisson Distribution, Binomial Approximation to Poisson Distribution and Normal Distribution (problems only), Mean, Variance and Standard Deviation of Binomial, Poisson and Normal Distribution (problems only).
MODULE III:
Calculus of Complex Variable: (13 Lectures)
Functions of a Complex Variable (definition and examples); Concept of Limit, Continuity and Differentiability

(problems only); Analytic Functions (definition and examples); Cauchy-Riemann Equations (statement only& related problems); Sufficient condition for a function to be analytic (statement only & related problems).
Concept of Simple Curve, Closed Curve, Smooth Curve & Contour; Some elementary properties of complex integrals (problems only); Cauchy's Theorem (statement only & related problems); Cauchy's Integral Formula(statement only & related problems); Cauchy's Integral Formula for the derivative of an analytic function(statement only & related problems); Cauchy's Integral Formula for the successive derivatives of an analytic function (statement only & related problems); Taylor's series and Laurent's series (problems only).
Zero of an Analytic Function and its order (definition & related problems); Singularities of an Analytic Function: Isolated Singularity and Non-isolated Singularity (definition & related problems); Essential Singularities, Poles (Simple Pole and Pole of Order m) and Removable Singularities (definition & related problems); Determination of singularities and their nature (problems only); Residue (definition & examples); Determination of the residue of a given function; Cauchy's Residue theorem (statement only & related problems).

MODULE IV:

Partial Differential Equation (PDE) and Series Solution of Ordinary Differential Equation (ODE): (11 Lectures)

Solution of PDE: Method of Separation of Variables.

Solution of Initial Value & Boundary Value Problem: One Dimensional Wave Equation, One Dimensional Heat Equation, Two Dimensional Laplace Equation.

Series solution of ODE: General method to solve $P_0\, y'' + P_1 y' + P_2 y = 0$ and related problems to Power series method**,** Bessel's Function, Legendre Polynomial.

Project Domains:

1. Study of physical processes through PDE and ODE.
2. Application of calculus of complex variable in real world engineering problems.
3. Study of uncertainty in real world phenomena using probability distribution.
4. Application of Fourier series and Fourier transform in engineering problems.

CO5	3	3	2	3	-	-	-	-	-	-	-	1	1	1

Course Name: Analog Electronic Circuits
Course Code: EI 301
Contact : 3:0:0
Total Contact Hours: 36
Credits: 3

Course Objective:

Provide a strong foundation on Linear Circuits.
Familiarize students with applications of various IC's.
Having a broad coverage in the field that is relevant for engineers to design Linear circuits using Op-amps.
Familiarize the conversion of data from Analog to Digital and Digital to Analog.

Course Outcome:

At the end of this course students will be able to

CO1: **Explain** the characteristics of diodes and transistors
CO2: **Analyse** various rectifier and amplifier circuits
CO3: **Design** sinusoidal and non-sinusoidal oscillators
CO4: **Design** OP-AMP based circuits
CO5: **Design** ADC and DAC

Prerequisite: Concept of basic electronics devices, basic law of circuit analysis

Module I: **[4]**
Small signal amplifiers: Introduction to Analog Integrated Circuits, BJT Modeling-hybrid model of transistors; Emitter follower circuits, High frequency model of transistors. FET Small signal analysis - Source follower

Module II: **[9]**
Transistor Amplifiers: RC coupled amplifier, functions of all components, equivalent circuit, derivation of voltage gain, current gain, input impedance and output impedance, frequency response characteristics, lower and upper half frequencies, bandwidth, and concept of wide band amplifier.

Feedback Amplifiers & Oscillators: Feedback concept, Voltage series-shunt, current series-shunt feedback Configurations, Berkhausen criterion, Colpitts, Hartley's, Phase shift, Wien bridge and crystal oscillators

Module III: **[14]**

Operational Amplifier: Introduction to Integrated Circuits, Differential Amplifier, Constant current source (current mirror etc.), level shifter, CMRR, Open & Closed loop circuits, importance of feedback loop (positive & negative), Block Diagram of OPAMP, Ideal OPAMP

Applications of Operational Amplifiers: analog adder, subtractor, integrator, differentiator, comparator, Schmitt Trigger. Instrumentation Amplifier, Log & Anti-log amplifiers, Analog multiplier, Precision Rectifier, voltage to current and current to voltage converter, free running Multivibrator , zero crossing detector

Multivibrator – Monostable, Bistable, Astable multivibrators ; Monostable and astable operation using 555 timer.

Module IV: **[9]**

Large signal Amplifiers: Introduction to power amplifiers (Class A, B, AB)

Power Supply:

Analysis for DC voltage and ripple voltage with C, L-C and C-L-C filters in Rectifier Circuit - Regulated DC power supplies- Line regulation, output resistance and temperature coefficient, Series and Shunt Voltage Regulation – percentage regulation, Fixed output voltage IC regulator 78xx and 79xx series , Adjustable output voltage regulator, LM 337 series power supply ICs , Concept of **Switched** Mode Power Supply`

Course Name: Digital Electronic Circuits
Course Code: EI 302
Contact:3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite: Concept of basic electronics and number system

Course Objective:
To acquire the basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits.
To introduce number systems and codes
To introduce basic postulates of Boolean algebra and shows the correlation between Boolean expressions
Give students the basic tools for the analysis and design of combinational circuits and sequential circuits
To introduce the concept of memories, programmable logic devices and digital ICs.
To acquire the knowledge of Digital-to-Analog Conversion, Analog-to-Digital Conversion.

Course Outcome:

On completion of this Subject/Course the student shall be able to:
CO1: Interpret of the fundamental concepts and techniques used in digital electronics.
CO2: apply the concept of various number systems in digital design.
CO3: solve complex circuit problem by applying knowledge of digital electronics
CO4: analyze and design various cost effective combinational and sequential circuits.

Module1:
Introduction:
Digital system, Comparison between Analog and Digital system, Logic level, Element of Digital Logic, Functions of Digital logic.
Data and number systems:
Number system: Binary, Octal and Hexadecimal representation and their conversions.
Number Representation: Signed binary number representation with 1's and 2's complement methods, Fixed point - Floating point
Binary Codes: BCD- Gray code- Excess 3 code- Alpha Numeric codes – Error detecting and correcting codes- properties
Binary Arithmetic: Addition, subtraction, Multiplication, Division, Addition and subtraction by 1's and 2's complement, BCD addition and subtraction [5]

Boolean algebra:
Theorems and operations, Boolean expressions and truth tables, Representation in SOP and POS forms Boolean functions; Min-term and Max-term expansions Minimization of logic expressions by algebraic method, K-map method and Quine- McClauskey method
Various Logic gates- their truth tables and circuits; Design of circuits with universal gates. Exclusive-OR and Exclusive NOR and equivalence operations [6]

Module II:
Design procedure–Adder: and Subtractor circuit: half and full adder and subtractor, BCD adder and subtractor, controlled inverter.
Convertors: BCD to excess-3 and vice versa, Binary to BCD, Gray to binary and viceversa.
Applications and circuits of Encoder, Decoder, Comparator, Multiplexer, De-Multiplexer and Parity Generator and Checker. [7]

Module III:

Sequential Logic:

Basic memory element-S-R, J-K, D and T Flip Flops-Truth table and Excitation table, Conversion of Flip-flop ,Various types of Registers and their design and application, Synchronous and Asynchronous counters, Irregular counter- counter design [5]

Sequential Circuits Design: State diagrams and tables, transition table, excitation table, Examples using flip-flops. Analysis of simple synchronous sequential circuits, construction of state diagram, State Machine-Mealy and Moore machine [5]

Module IV:

Memory Systems: RAM: Static RAM and Dynamic RAM, ROM, EPROM, EEROM
Programmable logic devices: programmable read only memory, programmable logic arrays and programmable array logic, Design using PLA, PAL, PROM [2]

Logic families:

TTL, ECL, MOS and CMOS, their operation and specifications: Logic levels, propagation delay time, power dissipation fan-out and fan-in, noise margin.
Implementation of Logic gate using TTL, MOS [2]

Different types of A/D and D/A:

Conversion techniques: analog-to- digital (successive approximation, Dual slope, flash) and digital-to- analog converters (weighted R, R-2R ladder and current steering logic). Characteristics of ADCs and DACs (resolution, quantization, significant bits, conversion/settling time)
[4]

Text Books:

1. A.Anand Kumar, Fundamentals of Digital Circuits- PHI
2 Morries Mano- Digital Logic Design- PHI
3. R.P.Jain—Modern Digital Electronics
4. Digital Integrated Circuits -- Taub and Schilling . Mcgraw Hill

Reference Books:

Course Name : Circuit Theory and Networks
Course Code: EI 303
Contact : 3:1:0
Total Contact Hours: 48
Credits: 4

Pre-Requisite: Concept of Basic electrical

Course Objective:

To prepare the students to acquire basic knowledge in the analysis of Electrical Networks
To solve electrical network using mesh and nodal analysis by applying network theorems
To analyze the transient response of series and parallel circuits and to solve problems in time and frequency domains
To understand the concept of resonance in series and parallel circuits.
To design various types of filters.
To relate various two port parameters and transform them.

Course Outcome:

On completion of this Subject/Course the student shall be able to:

CO1: Find out resonance of series & parallel resonant circuit
CO2: Explain dynamic performance of the networks using Laplace Transform.
CO3: Determine two port networks parameters
CO4: Solve complex circuit problem by applying knowledge of circuit theorems
CO5: Design different types of filters

Module1:
Introduction: Continuous & Discrete, Fixed & Time varying, Linear and Nonlinear, Lumped and Distributed, Passive and Active networks and systems. Independent & Dependent sources, Source Transformation, Star-Delta conversion [5]
Network equations: Kirchoff's Voltage Law & Current Law, Formulation of network equations, Loop variable analysis, Supermesh Analysis, Node variable analysis, Supernode Analysis
Network theorem: Superposition, Thevenin's, Norton's,Maximum power transfer, Compensation & Reciprocity theorem. Millman's theorem and its application. Solution of Problems with DC & AC sources. [7]

Module II:
Laplace transforms: Concept of complex frequency, properties of Laplace Transform, Initial Value Theorem and Final Value Theorem, Concept of Convolution theorem and its application, Transformation of step, ramp, impulse, exponential, damped and undamped sine & cosine functions. Laplace Transform of Gate function & its application. Laplace transform of Periodic function. Inverse Laplace Transform, application of Laplace Transform in circuit analysis. [7]

Circuit Transients: Impulse, Step & Sinusoidal response of RL, RC, and RLC circuits. Transient analysis of different electrical circuits with and without initial conditions using AC & DC source. Solutions of Problems with DC & AC sources [6]

Module III:
Two port network analysis: Open circuit Impedance & Short circuit Admittance parameters, Transmission parameters, Hybrid parameters and their inter relations. Condition of Reciprocity & symmetry. Interconnection of two port networks. Solution of Problems with DC & AC sources. [6]

Resonant Circuits: Series and Parallel Resonance, Impedance and Admittance Characteristics, Quality Factor, Half-Power Points, Bandwidth, Solution of problems [5]

Module IV:

Graph of Network: Concept of Tree, Branch, Tree link, junctions, Incident matrix, Tie-set matrix and loop currents, Cut-set matrix and node pair potentials, duality of networks, solution of problems. [5]

Coupled circuits: Magnetic coupling, Polarity of coils, Polarity of induced voltage, Concept of Self and Mutual inductance, Coefficient of coupling, Modeling of coupled circuits, Solution of problems. [5]

Filter Circuits: Analysis of Low pass, High pass, Band pass, Band reject, All pass filters (first and second order only) using operational amplifier. Solution of Problems [2]

Text Books:
1. Network Analysis, M.E.Van Valkenburg (Prentice H all)

Course Name : Electrical & Electronic Measurement &Instrumentation
Course Code: EI304
Contact : 3:0:0
Total Contact Hours : 36
Credits: 3

Course objective:
To familiarize the students how different types of electrical and electronics meters work and their construction and applications.
To provide an extensive knowledge about standards and units of measurements.
To provide knowledge for the calibration and standardization of various instruments.
To provide students with opportunities to develop basic skills in the design of measuring equipments.
To familiarize the students with the available software for virtual instrumentation.

Course Outcome:

On completion of this Subject/Course the student shall be able to:

CO1: Apply the knowledge to measure a particular parameter using an appropriate measuring instrument
CO2: Analyze the process of calibration and standardization the instruments applying the knowledge of calibration .
CO3: Apply the knowledge of the instrumentation and measurement systems in the real life applications
CO4: Design measuring instruments on requirement basis.

Module I:
Introduction to Electrical & Electronic Measurement &Instrumentation
Static and dynamic characteristics of measuring instruments: Definitions of accuracy, precision, hysteresis, nonlinearity, sensitivity, speed of response, fidelity, static and dynamic error, Statistical analysis of errors [4]

Reliabity, MTTF, Bath tub curve [1]

Introduction to electrical voltmeters and ammeters: PMMC, MI, Electrodynamometer: Construction, Torque equation, Damping, range extension [6]

Module II:
Measurement of Resistance: Wheatstone bridge & Kelvin's Double bridge (DC Bridge), Loss of charge method, Meggar
Measurement of Capacitance: De Sauty's bridge & Schering bridge (AC Bridge)
Measurement of Inductance: Maxwell's inductance capacitance bridge (AC Bridge), Anderson Bridge
(*each bridge should cover: Bridge balance equation, Magnitude and phase balance of AC bridges, Phasor Diagram), Localization of cable faults [7]
Basic concept of Potentiometer, Wattmeter and Energy meter [4]

Module III:
PLL including VCO: Block diagram, circuit diagram, operation, modes Charge amplifier [2]
True RMS voltmeter, Digital Voltmeter, Digital frequency meter including V to F, F to V [5]
Q meter [1]

Module IV:
Oscilloscopes and its applications: Oscilloscope Time Base, Triggering, Oscilloscope Controls, Oscilloscope Probes, Digital Storage Oscilloscope [5]
Spectrum Analyzer [1]

CO3	3	2	3	3	1	1	1	1	1	1	1	3	1	2
CO4	2	2	3	1	1	1	1	1	1	1	1	1	1	2

Course Name: Analog Electronics Lab
Course Code : EI 391
Contact :0:0:3
Credits : 1.5

Course Objective:

Understand the scope of modern electronics.
Describe models of basic components.
Design and construct simple electronic circuits to perform a specific function, e.g.,designing of amplifiers, ADC etc.
Understand capabilities and limitations and make decisions regarding their best utilization in a specific situation.

Course Outcome:

At the end of this course students will be able to:
CO1: Show the working of diodes, transistors and their applications.
CO2: Design a common emitter/base/collector amplifier and measure its voltage gain.
CO3: Design the different circuits of operational amplifiers.
CO4: Design different types of filters and apply the same to oscillators and amplifiers.
CO5: Design a circuit to convert an analog signal to digital one.

List of Experiment:

1. Study of ripple and regulation characteristics of full wave rectifier with and without capacitor filter
2. Construction of a R-C coupled amplifier & study of its input impedance, output impedance and frequency response
3. Study of timer circuit using NE555 & configuration for monostable & astable multivibrator
4. Study a linear voltage regulator using regulator IC chip
5. Construction of analog adder and subtractor using opamp
6. Construction of integrator and differentiator using opamp
7. Construction of precision rectifier using opamp
8. Construction of a simple function generator using opamp
9. Construction of a Schmitt trigger circuit using opamp
10. Design and testing of Wien bridge oscillator
11. Study and analysis of Instrumentation Amplifier
12. Innovative Experiment

CO-PO-PSO Mapping:(DETAILED; HIGH:3; MEDIUM:2; LOW:1**):**

Course Name: Digital Electronic Circuits Lab
Course Code: EI 392
Contact: 0:0:3
Credits: 1.5

Course Objective:
To reinforce learning through hands-on experience with design, construction, and implementation of digital circuits.
To train students with all the equipment which will help in improving the basic knowledge
Course Outcome:
On completion of this course students will be able to:
CO1: Identify the operation of various basic logic gates ICs to implement different digital circuits.
CO2: Demonstrate the basic operation of different combinational circuits including arithmetic circuits
CO3: Evaluate the applications of flip-flops as binary registers and counters used in large digital integrated circuits
CO4: Design mini digital electronic circuit based systems.
List of Experiment:

1. Realization of basic gates using Universal logic gates
2. Code conversion circuits- BCD to Excess-3 & vice-versa
3. 4-bit parity generator & comparator circuits
4. Construction of simple Decoder & Multiplexer circuits using logic gates
5. Design of combinational circuit for BCD to decimal conversion to drive 7segment display using multiplexer
6. Construction of simple arithmetic circuits-Adder, Subtractor.
7. Realization of RS-JK & D flip-flops using Universal logic gates.
8. Realization of Universal Register using JK flip-flops & logic gates.
9. Realization of Universal Register using multiplexer & flip-flops.
10. Realization of Asynchronous and Synchronous Up/Down counter.
11. Design of Sequential Counter with irregular sequences.
12. Realization of Ring counters.
13. Innovative Experiment.

Course Name: Circuits and Networks Lab
Course Code: EI 393
Contact: 0:0:3
Credits : 1.5

Course Objective:
To acquaint students with the simulation software such as MATLAB to carry out design experiments as it is a key analysis software of engineering design
To generate different signals and transform those to s- domain using MATLAB
To verify various network theorem and other network aspects using SIMULINK.
To provide basic laboratory experience with analyzing the frequency response of different filters using simulation software.

Course Outcome:
On completion of this Subject/Course the student shall be able to:
CO1:Apply the techniques and skills of modern engineering tools necessary for engineering practice.
CO2:Identify, formulate and solve engineering problems with simulation software.
CO3: Analyze transient response of series /parallel R-L-C circuit using simulation software.
CO4:Determine frequency response of different filters using simulation software

List of Experiments:

1. Introduction to MATLAB
2. Generation of Periodic, Exponential, Sinusoidal, Damped sinusoidal, Step, Impulse, Ramp signals using MATLAB in both discrete and analog form
3. Verification of Network Theorems using simulation software
4. Determination of Laplace transform and inverse Laplace transformation using MATLAB
5. Transient response in R-L and R-C Network: Simulation/hardware
6. Transient response in R-L-C Series circuits Network: Simulation and hardware.
7. Determination of Impedance (Z) and Admittance(Y) parameters of two port network
8. Frequency response of LP and HP filters: Hardware
9. Frequency response of BP and BR filters
10. Evaluation of convolution integral for periodic & non-periodic signal using MATLAB
11. Innovative Experiment

Course Name: Electrical & Electronic Measurement & Instrumentation Lab
Course Code: EI 394
Contact: 0:0:3
Credits: 1.5

Course objective:
1. To understand how different types of bridge circuits are to be operated
2. To understand about different types of static and dynamic characteristics.
3. To understand the operation of VCO and PLL
4. To understand the operation of Digital Storage Oscilloscope
5. To familiarize the calibration procedure of different electrical meters

Course outcome:
On completion of this Subject/Course the student shall be able to:
CO1: Apply the knowledge for calibration of different electrical meters.
CO2: Relate different static and dynamic characteristics of a measuring instrument for a typical application.
CO3: Analyze the measured data statistically.
CO4: Construct a given signal using the knowledge of Digital Storage Oscilloscope.

List of Experiment:
Measure the resistivity of material using Kelvin Double Bridge
Measurement of Capacitance by De Sauty Bridge
Calibrate dynamometer type Wattmeter by potentiometer
Calibrate A.C. energy meter.
Measurement of Power using Instrument transformer
Study of Static Characteristics of a Measuring Instrument
Study of Dynamic Characteristics of a Measuring Instrument
Realization of a V-to-I & I-to-V converter.
Statistical analysis of errors in measurement.
Study of VCO (Voltage controlled oscillator) & PLL (Phase Locked Loop).
Analysis of various waveforms and spectrum using Spectrum Analyser.
Familiarization with Digital Storage Oscilloscope.
Innovative experiment

Course Name: Behavioral & Interpersonal Skills
Course Code: MC 381
Contact: 0:0:3
Total Contact Hours: 36

Course Objective: To train the students in acquiring interpersonal communication skills by focusing on language skill acquisition techniques and error rectification through feedback.

Course Outcome:
After completion of this course students will be able to do the following:
CO1: Students will be enabled to recognize, define and identify the basic principles of workplace interpersonal communication.
CO2: Students will be better able to understand functionality of digital communication media, compare and contrast between media.
CO3: Students will be better able to interpret, analyze and diagnose behavioural and personality issues in the corporate workplace.
CO4: Students will be enabled to understand, adapt and evaluate corporate etiquette and behavioural norms.
CO5: Students will be able to create, design and formulate a team-based Project Report and videographic presentation.

MODULE ONE – INTERPERSONAL COMMUNICATON

1. The skills of Interpersonal Communication.
2. Gender/Culture Neutrality.
3. Rate of Speech, Pausing, Pitch Variation and Tone.
4. Corporate Communication.
5. Branding and Identity.

MODULE TWO- INTERPERSONAL COMMUNICATION BASED ON WORKPLACE COMMUNICATION
6. Workplace Communication.
7. Modes of Communication (Telephone, Conference Call, Team Huddle, Public Relation etc.)
8. Communication with Clients, Customers, Suppliers etc.
9. Organizing/Participating in Business Meeting.
10. Note Taking.
11. Agenda.
12. Minutes.

MODULE THREE – BUSINESS ETIQUETTE AND CORPORATE LIFE

13. Presenting oneself in the Business Environment.
14. Corporate Dressing and Mannerism.
15. Table Etiquette (Corporate Acculturation, Office parties, Client/Customer invitations etc.)
16. E-mail Etiquette.
17. Activity based Case Study.

MODULE FOUR – MOVIE MAKING: CORPORATE BUSINESS MEETING

18. Team based Brainstorming.
19. Process Planning and Developing Plot.
20. People management.
21. Documentation and Scripting.
22. Shooting the Movie: Location and Camera.
23. Post Production and Editing.
24. Movie Review: Feedback and Analysis

ASSESSMENT		
1.	**Viva**	**10**
2.	**Personal Skill Enhancement Log**	**25**
3.	**Movie Making: Corporate Business Meeting**	**25**
4.	**Term End Project**	**40**

*Students may choose either to work on participation in all the activities of Institute's Innovation Council for eg: IPR workshop/ Leadership Talks/ Idea/ Design/ Innovation/ Business Completion/ Technical Expos etc.

Innovative activities to be evaluated by the Programme Head/ Event coordinator based on the viva voce and submission of necessary certificates as evidence of activities.

Course Name: Physics-II
Course Code: PH 401
Contacts: 3:0:0
Total Contact Hours : 36
Credits: 3

Prerequisite:
Knowledge of Physics up B. Tech 1st year Physics-I course

Course Objective:
The Physics-II course will provide the exposure to the physics of materials that are applied in digital circuitry, storage devices; exposure to the physics of quantum logic gate operation and quantum computation; an insight into the science & technology of next generation; foundations of electromagnetic theory and communication systems; concept of fundamental particles and associated applications in semiconductors

Course Outcome:
CO1: Define and understand electrostatics, magnetostatics and electromagnetic theory, operator formalism in Quantum Mechanics, categories of storage devices, materials of low-dimensions and fundamental particles.
CO2: Apply the knowledge of Schrödinger equation in problems of junction diode, tunnel diode, Electromagnetic theory in communication and networking, Poisson's equations in various electronic systems, Fermi levels in intrinsic and extrinsic semiconductors.
CO3 : Analyze the Role of quantum confinement in inducing novel features of a nano material, Change in electric and magnetic fields in various symmetrical bodies,
CO4 : Compare different dimensions of nano materials

Module 1: Electric and Magnetic properties of materials (09L)
Module 1.01:Insulating materials:
Dielectric Material: Concept of Polarization, the relation between **D, E** and **P**, Polarizability, Electronic (derivation of polarizability), Ionic, Orientation & Space charge polarization (no derivation), behavior of Dielectric under alternating field (qualitative discussion only), Local electric field at an atom: Lorentz field, Lorentz relation; Dielectric constant and polarizability – Clausius-Mossotti equation (with derivation) ; Dielectric losses. ferroelectric and piezoelectrics (Qualitative study). 4L
Module 1.02: Magnetic materials and storage devices:
Magnetic Field & Magnetization M, relation between **B, H, M**. Bohr magneton, susceptibility, Diamagnetism- & Paramagnetism - Curie law (qualitative discussion), Ferromagnetism– Curie Temperature, Weiss molecular field theory (qualitative) & Curie-Weiss law, concept of θ_p , Hysteresis, Hard ferromagnets, Comparison and applications of permanent magnets (storage devices) and Soft ferromagnets (Permalloys, Ferrites etc.)
5L

Module 2: Quantum Mechanics-II (8L)
Formulation of quantum mechanics and Basic postulates- superposition principle, orthogonality of wave function, expectation value; operator correspondence, Commutator. Measurements in Quantum Mechanics-Eigen value, Eigen function, Schrödinger's equation as energy eigen value equation. 4L
Application of Schrödinger equation – Particle in an infinite square well potential (1-D and 3-D potential well; Discussion on degenerate levels), 1D finite barrier problem and concept of quantum tunnelling (solve only $E<V_0$). 4L
Module 3: Statistical Mechanics: (6L)
Concept of energy levels and energy states, phasespace, microstates, macrostates and thermodynamic probability, MB, BE, FD, statistics (Qualitative discussions)- physical significance, conception of bosons, fermions, classical limits of quantum statistics, Fermi distribution at zero & non-zero temperature, Concept of Fermi level, Density of states, Application in metals, no of particles, average energy calculation at 0^o K. 6L
Module 4: Elements of solid state physics (6L)
Module 4.01: Free electron theory (qualitative) - Electronic conduction in solids : Drude's theory, B Wiedemann Frantz Law, Idea of quantization of energy-Sommerfeld theory. 3L
Module 4.02: Band theory of solids: Bloch Theorem-statement only, Kronig-Penny model (qualitative treatment)-

Energy-band (E-k) diagram, allowed and forbidden energy bands 3L

Module 5: Physics of Nanomaterials (4L)

Reduction of dimensionality, properties of nanomaterials, Quantum wells (two dimensional), Quantum wires (one dimensional), Quantum dots (zero dimensional); Quantum size effect and Quantum confinement. Carbon allotropes. Application of nanomaterials (CNT, grapheme, electronic, environment, medical).
4L

Module 6: Nuclear energy as future energy (3L)

Nuclear Binding Energy, Liquid drop model, Concept of Nuclear Fission, Nuclear Fusion & Energy output , Nuclear Reactor. 3L

CO4	1	2	2	3	-	-	-	-	-	-	-	1	3	3

Course Name: Sensors and Transducers
Course Code: EI 401
Contact: 3:0:0
Total Contact Hours: 36
Credits: 3

Course Objective:

To deal with various types of Sensors & Transducers and their working principle.
To deal with Resistive, Capacitive and Inductive transducers.
To deal with some of the miscellaneous transducers.
To know the overview of different advance sensors.

Course Outcome:
Students should be able to
CO1: Illustrate the fundamental principles of various types of sensors.
CO2: Illustrate the different types of transducers available.
CO3: Use appropriate sensors to perform engineering tasks and scientific researches.
CO4: Design of different Sensors.
CO5: Design the basics of modern sensors

Module I:
Introduction & Characteristics of Transducers
Introduction to sensors and transducers, Measurement system, Principles of sensing & transduction, Classification of sensors, Static characteristics, Dynamic characteristics: Zero, first order and second order measurement system, Response to impulse, step, ramp and sinusoidal inputs, sensitivity calculation, error estimation.
Resistive Sensing Element
Potentiometer: Loading effect, Strain gauge: theory, types, temperature compensation, applications: force, velocity and torque measurements.
Inductive Sensing Element
Self-inductive transducer, Mutual inductive transducers, Variable Reluctance type, Linear Variable Differential Transformer (LVDT): construction, Characteristic Curve, application: LVDT Accelerometer, LVDT displacement sensors
Module II:
Capacitive Sensing Element
Capacitive transducer: Variable Area Type, Variable distance type , Variable Permittivity type, calculation of sensitivities, applications.
Piezoelectric & Piezoresistive Sensing Element
Piezoelectric effects, charge and voltage coefficients, crystal model, materials, natural and synthetic types – their comparison, force and stress sensing, piezoelectric accelerometer, piezoresistive sensor.
Tachometers: Stroboscopes, Encoders, seismic accelerometer, Measurement of vibration, Proximity switches, Load cells: pneumatic, piezoelectric, elastic and magneto-elastic types - their mounting.**08L**
Module III:
Optical Sensors
Light Dependent Resistor, Optocoupler, Photodiode, Phototransistor, Photomultiplier tube, solar cell.

Magnetic Sensors
Sensors based on Villari effect for assessment of force, torque, rpm meters,Hall effect and Hall drive, performance characteristics
Radioactive sensors
Gieger counter, proportional counter, Scintillation detection, Ionization chamber . 0**8L**
Module IV:
Miscellaneous Sensors
IC temperature Sensor, Electrochemical Gas sensors, Fibre optic sensors- Thick film technology-MEMS sensors-Nano sensors- Sensors for intelligent systems- Introduction to Smart sensors and Sensor network.**08L**

Course Name: Microprocessors and Microcontrollers
Course Code: EI 402
Contact : 3:0:0
Total Contact Hours:36
Credits: 3

Prerequisite: Concept of Digital electronics

Course Objective:

To understand the architectures of 8085 & 8086 microprocessors and 8051 microcontroller.
To familiarize with the assembly level programming technique.
To understand interfacing of 8 bit microprocessor /microcontroller with memory and peripheral chips involving in system design.
To be able to design a microprocessor /microcontroller based system.

Course Outcome:

On completion of this course, students will be capable of

CO1: Apply the knowledge of the internal architecture 8085/8086 microprocessors and 8051 for a specific application.
CO2: Analyzing various instructions related to particular programs for specific applications.
CO3: Analyzing the concept of interfacing circuits to some real time applications
CO4: Designing various microprocessor and microcontroller based systems for a specific application.

Module I:
Introduction to microprocessors:
Introduction to microprocessors, Evolution of microprocessors, The 8085 Internal architecture, Pin Diagram Instruction set and Assembly Language Programming. Addressing Modes. **7L**

Module II
Microprocessor Related Operations:
The 8085 microprocessor: Timing diagrams, Stack and subroutine related operation, Counter and Time delay generation, Interrupt systems, DMA operation, Introduction to Serial Communication
7L

Module III
Peripherals interfacing techniques with 8085:
Interfacing memory, Interfacing I/O devices. Programmable peripheral devices (PPI) – Intel 8255, Programmable interval timer – Intel 8254, A/D and D/A converters, Programmable Interrupt Controller 8259A, Intel 8251 USART
8L

Module IV
Intel 8086/8088 Microprocessor:
Architecture, Register organization, Clock Generator, Resetting the microprocessor, Wait State Inserting, Bus Buffering, Pin details, Assembly Language Programming and Addressing Modes.
4L

Module V
Introduction to single chip microcontrollers:
Intel MCS-51 family features, 8051/8031 architecture, pin configuration, I/O ports and Memory organization. Instruction set and basic assembly language programming. Timer/Counter and Serial Communication, Interrupts
Assembly language programming using 8051:
Moving data, external data moves, code memory read only data moves, PUSH, POP, data exchanges
Logical instructions, Byte level, bit level instructions, ROTATE, SWAP instructions, Arithmetic instructions, Flags, incrementing, decrementing, addition, subtraction, multiplication, division, decimal arithmetic

Jump and Call instructions, Jump and Call ranges, subroutines and return instructions

MCS-51 applications: Square wave and pulse wave generation. **10L**

CO3	3	2	3	2	2	2	1	1	1	1	1	3	2	2
CO4	3	2	3	3	2	2	1	1	1	1	1	3	1	1

Course Name: Digital Signal Processing
Course Code: EI 403
Contact: 3:0:0
Total Contact Hours: 36
Credits : 3
Prerequisite: Analog Electronics circuit, Signals & Systems, Analog Filters
Course Objective:

To develop the knowledge on signals used in digital signal processing.
To impart the knowledge of the principles of discrete-time signal analysis to perform various signal operations
Apply the principles of Fourier transform analysis to describe the frequency characteristics of discrete-time signals and systems
To study various sampling techniques and different types of filters
To learn the use of computer programming tools to create, analyze process and visualize signals and to plot and interpret magnitude and phase of LTI system frequency responses
To understand the architecture of a digital signal processor and some programming issues in fixed-point digital signal processor in real-time implementation.

Course Outcome:

The students will be able to:
CO1: recall the knowledge about continuous and discrete time signals
CO2: Understand the Fourier Transform, and examine the process of Quantization and the effects of finite register length
CO3: Understand and implement DFTs on long data sets such as speech signals and images.
CO4: Develop different types of FIR & IIR filter structures and their implementations
CO5: apply the concept of FFTs for efficient implementation of linear convolution
CO6: design some projects related to the fields such as speech processing, audio signal processing, digital image processing, video and audio compression.

Module I:

LTI systems: [8L]
Concept of signals & systems, digital signal processing and its relevance to digital communication.
Definition, representation, impulse response, derivation for the output sequence, concept of convolution, graphical, analytical and overlap-add methods to compute convolution supported with examples and exercise, properties of convolution, interconnection of LTI systems with physical interpretations, stability and causality conditions, recursive and non-recursive systems.

Module II:

Discrete Time Fourier Transform(DTFT): [2L]
Concept of frequency in discrete and continuous domain and their relationship (radian and radian/sec), freq. response in the discrete domain. Discrete system's response to sinusoidal/complex inputs (DTFT), Representation of LTI systems in complex frequency domain.
Discrete Fourier Transform: [8L]
Concept and relations for DFT/IDFT; Relation between DTFT & DFT; Twiddle factors and their properties; DFT/DFT as linear transformation and matrices ; Computation of DFT/IDFT by matrix method; Properties of DFT – periodicity, linearity, time reversal, circular time & frequency shift, symmetry, circular symmetry, duality, multiplication of two DFTs, circulation convolution, circular correlation ; Computation of circular convolution by graphical; Linear filtering using DFT, aliasing error, filtering of long data sequences- Overlap-Save and Overlap-Add methods.

Fast Fourier Transforms: [4L]
Radix-2 algorithm, decimation-in-time, decimation-in-frequency algorithm, signal flow graph, Butterflies, computations in one place, bit reversal, examples for DIT & DIF FFT Butterfly computations and exercises.

Module III:

Filter design: **[6L]**

Basic concepts of IIR and FIR filters, difference equations, design of Butterworth IIR analog filter using impulse invariant and bilinear transform. Concept of Chebyshev filters and comparison with Butterworth filter. Design of linear phase FIR filters -no. of taps, rectangular, Hamming and Blackman windows. Effect of quantization. Some examples on practical filters.

Multirate Digital Signal Processing: **[2L]**

Introduction to multirate digital signal processing, sampling rate conversion, multistage interpolator & decimator, digital filter banks.

Module IV:

Digital Signal Processor: **[6L]**

Elementary idea about the architecture and important instruction sets of TMS320C 5416/6713 processor, writing of small programs.

Text Books :

1. Digital Signal Processing–Principles,Algorithms and Applications, J.G.Proakis&D.G.Manolakis, Pearson Ed.

Courser Name: Electromagnetic Theory and Transmission Line
Course Code: EI-404
Contact : 3:0:0
Total Contact Hours: 36
Credits: 3

Prerequisite: Concept of physics ,vector analysis

Course Objective:

To acquire the knowledge of Electromagnetic field theory that makes the student to get a theoretical foundation to be able in the future to design emission , propagation and reception of electromagnetic wave systems

To identify , formulate and solve the problems related to fields and electromagnetic waves propagation in a multidimensional frame

Understand the basic concepts of electric and magnetic fields

To provide the students with a solid foundation in engineering fundamentals required to solve problems and also to pursue higher studies

Understand the concept of conductors, dielectrics, inductance and Capacitance, Gain knowledge on the nature of magnetic materials. Understand the concept of static and time varying fields.

Course Outcome:

Student will be able to:
CO1: understand and interpret the physical meanings of gradient, divergence and curl, vector calculus and orthogonal coordinates.
CO2: understand the thorough treatment of the theory of electro dynamics, mainly from a classical field theoretical point of view, and includes such things as electrostatics and magneto statics, boundary conditions
CO3: apply the concept of steady fields and different associated laws in different cases and mediums and realize the physical significances of Maxwell's equations for static field.
CO4: solve different problems of the time varying fields and correlate the Poynting vector and Poynting theorem.
CO5: analyze the wave equations, and be able apply the concepts in transmission line, wave guide.
CO6: Analyze universal concepts in three-dimension real world, i.e., electro-magnetic wave propagation in free-space, dielectrics, conductors.

Module I
Introduction to the Electromagnetic Theory,
Vector calculus – orthogonal Coordinate Systems, Curvilinear co-ordinate system (basics).Transformations of coordinate systems; Del operator; Gradient, Divergence, Curl – their physical interpretations; Divergence Theorem, Stoke's Theorem, Laplacian operator.**6L**

Module II
Coulomb's law, electric field intensity, charge distribution.; Gauss' law, flux density and electric field intensity.. Current Densities, Conductors, Poisson's & Laplace's equations, Uniqueness theorem, Biot-Savart law, Ampere's law, Relation between J & H, Vector magnetic Potential. Maxwell's equations for static field. Study of different Applications on static fields using MATLAB Programming **.**
6L
Module III

Faraday's law & Lenz's law, Displacement Current, J C – J D Relation, Maxwell's equations for time varying field, Time harmonic fields, Maxwell's equations for time harmonic field, Wave Equation, Boundary Conditions between media interface; Uniform Plane wave; Wave Propagation in Lossy Dielectric, Loss-less Dielectric, Free space, good

conductor, skin effect and skin depth. Poynting Theorem, Power flow, Poynting vector. Wave polarizations. **10L**

Module IV

Transmission Lines: Concept of Lump parameters and Distributed parameters, Line Parameters, Transmission line equations and solutions, Physical significance of the solutions. Propagation constant, Characteristic Impedance; Wavelength; Velocity of Propagation, group velocity , phase velocity; Distortion-less Line, Reflection and Transmission coefficients; Standing Waves, VSWR, Input Impedance, Smith chart, Load Matching Techniques. **9L**

Module V

Transmission line at microwave frequency; brief of rectangular waveguide, circular waveguide, resonators, concept of cavity, Basics of Antenna.**5L**

Text Books:

1. Mathew N.O.Sadiku , Principles of Electromagnetics, 4th Edition
2. W.H. Hayt & J.A. Buck, Engineering Electromagnetics, 7th Edition, Tata- McGraw-Hill
3. Edminister , Theory and Problems of Electromagnetics , 2nd Edition, Tata-McGraw- Hill

Paper Name: Physics II Lab
Paper Code: PH 491
Total Contact Hours: 0:0:3
Credit: 1.5

Pre requisites: Knowledge of Physics up B. Tech. 1st year Physics-I course

Course Objective:

The Physics-II course will provide
exposure to the physics of materials that are applied in electrical engineering
an insight into the science & technology of next generation and related technicalities through quantum mechanics advanced materials for electrical engineering
concept of fundamental particles and associated applications in semiconductors
At the end of the course students' will be able to
CO1 : demonstrate experiments allied to their theoretical concepts

CO2 : conduct experiments using semiconductors , dielectric and ferroelectrics
CO3 : classify various types of magnetic materials
CO4 : participate as an individual, and as a member or leader in groups in laboratory sessions actively
CO5 : analyze experimental data from graphical representations , and to communicate effectively them in Laboratory reports including innovative experiments

Experiments on Module 1: Electric and Magnetic properties of materials (8L)
1. Study of dipolar magnetic field behavior.
2. Study of hysteresis curve of a ferromagnetic material using CRO.
3. Use of paramagnetic resonance and determination of Lande-g factor using ESR setup.
4. Measurement of Curie temperature of the given sample.
5. Determination of dielectric constant of given sample (frequency dependent)/Measurement of losses in a dielectric using LCR circuits.

Experiments on Module 2: Quantum Mechanics-II (6L)
6. Determination of Stefan's radiation constant.
7. To study current-voltage characteristics, load response, areal characteristics and spectral response of photo voltaic solar cells & measurement of maximum workable power.
8. Measurement of specific charge of electron using CRT.

Experiments on Module 4: Solid state physics (9L)
9. Determination of band gap of a semiconductor.
10. Determination of Hall co-efficient of a semiconductor and measurement of Magneto resistance of a given semiconductor

In addition to regular 7 experiments it is **recommended that each student should carry out at least one experiment beyond the syllabus/one experiment as Innovative experiment.

Probable experiments beyond the syllabus:
1. Determination of thermal conductivity of a bad conductor by Lees and Chorlton's method.
2. Determination of thermal conductivity of a good conductor by Searle's mothod.
3. Study of I-V characteristics of a LED.
4. Study of I-V characteristics of a LDR
5. Study of transducer property: Determination of the thermo-electric power at a certain temperature of the given thermocouple.
6. Innovative Experiment

CO-PO Mapping: (DETAILED; HIGH:3; MEDIUM:2; LOW:1**):**

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Course Name: Sensors and Transducers Lab
Course Code: EI 491
Contact: 0:0:3
Credits: 1.5

Course Objective:

To identify suitable instruments for the specific physical parameter measurement.
To operate Resistive, Capacitive and Inductive transducers.
To recommend the transducers for specific physical parameter measurement.
To characterize specific transducers.

Course Outcome:
The students will be able to:

CO1: Illustrate the working of transducers and various transducers used for the measurement of various physical variables.
CO2: Analyze the characteristics of the transducers.
CO3: Estimate the design specifications of different transducers.
CO4: Design sensor based on the real time application.

List Of Experiment:

1. Displacement measurement by using a capacitive transducer.
2. Pressure and displacement measurement by using LVDT.
3. Study of a load cell with tensile and compressive load.
4. Torque measurement Strain gauge transducer.
5. Speed measurement using magnetic proximity sensor.
6. Speed measurement using a Stroboscope.
7. Study of the characteristics of a LDR.
8. Pressure measurement using Piezo-electric transducer
9. Study of the Characteristics of Hall-effect transducer
10. Innovative experiment

CO-PO-PSO Mapping:(DETAILED; HIGH:3; MEDIUM:2; LOW:1**):**

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2	-	-	-	-	-	-	-	-	-	1	1	2

CO4	1	2	-	-	-	-	-	-	-	3	-	1	1	2

Course Name: Microprocessors and Microcontrollers Lab
Course Code :EI 492
Contact :0:0: 3
Credits : 1.5

Course Objective:

1. To enable the students analyze microprocessors and microcontrollers.
2. To grow programming concept using microprocessor.
3. To make students able to write programs, interface with peripherals and implement them in projects.
4. To be able to choice suitable microprocessors and microcontrollers for any design and implementations.
5. To be able to interfacing microprocessors and microcontrollers with peripherals device.

Course Outcome:
After completion of this course, the students will be able to
CO1: analyze assemble language program in 8085 and 8086 microprocessor to solve various complex engineering problem.
CO2: design microprocessor based systems for real time applications.
CO3: design interfacing circuits to the microprocessor to communicate with external devices, which can be associated with public safety, health, security and other societal and environmental concerns
CO4: develop the microprocessor and microcontroller based interfacing as per the requirements.

List of Experiment:

Familiarization with 8085 and 8051 trainer kit components.
Program development using basic instruction set (data transfer, Load/ Sore, Arithmetic, Logical) using 8085 trainer kit such as
a) Addition and subtraction
b) Copying and shifting a block of memory
c) Packing and unpacking of BCD numbers
d) Addition of BCD numbers
e) Binary to ASCII conversions
f) String matching
g) Multiplication of two numbers
h) Sorting of array of numbers
Program using subroutine calls and IN/OUT instructions using 8255 PPI on the trainer kit, write subroutine for delay, reading switch state & glowing LEDs accordingly, finding out the frequency of a pulse train etc.
Study of 8051 Micro controller kit and writing programs as mentioned in section 2.
Innovative experiment

CO-PO-PSO Mapping: DETAILED; HIGH:3; MEDIUM:2; LOW:1**):**

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Course Name: Digital Signal Processing Lab
Course Code: EI 493
Contact: 0:0:3
Credits: 1.5

Course Objective:

To implement simulation and development of basic signal processing algorithms.

To study the standardized environments such as MATLAB and general-purpose DSP development kits.

To analyze and Observe Magnitude and phase characteristics of different signals.
The experiments implement fundamental concepts of digital signal processing like sampling and aliasing, internal arithmetic operations, digital filter design and implementation, signal generation.

Students will try to learn about the knowledge on different algorithms associated with filtering of long data sequences.

Course Outcome:

After completion of the laboratory course students will be able to:

CO1: understand various signals generation.

CO2: calculate the system output using convolution method with MATLAB Software package.

CO3: analyze and Observe Magnitude and phase characteristics of different signals.

CO4: determine DFT, FFT, IDFT using MATLAB.

CO5: determine Magnitude and phase characteristics (Frequency response Characteristics) of digital LP,HP& FIR Butterworth filters.

CO6: Develop the DSP algorithms in software using a Computer language such as C with TMS320C6713 floating point Processor.

Experiments:

Sampled sinusoidal signal, various sequences and different arithmetic operations using MATLAB.
Convolution of two sequences using graphical methods and using commands- verification of the properties of convolution.
Z-transform of various sequences – verification of the properties of Z-transform.
Twiddle factors – verification of the properties.
DFTs / IDFTs using matrix multiplication and also using commands.
Circular convolution of two sequences using graphical methods and using commands, Differentiation between linear and circular convolutions.
Verifications of the different algorithms associated with filtering of long data sequences and Overlap –add and Overlap-save methods.
Implementation of FFT of given sequence.
Implementation of LP & HP FIR filters for a given sequence.
Hardware Laboratory :
Writing & execution of small programs related to arithmetic operations and
Convolution using Assembly Language of TMS320C 5416/6713 Processor
Innovative Experiment

C. MANDATORY ACTIVITIES / COURSES

Course Name: Environmental Science
Course Code: MC401
Contact: 3:0:0
Total Contact Hours: 22
Credits: 3l

Pre-requisite: Basic knowledge of Chemistry & Mathematics

Course Objective:

Be able to understand the natural environment and its relationships with human activities.
Be able to apply the fundamental knowledge of science and engineering to assess environmental and health risk.
Be able to understand environmental laws and regulations to develop guidelines and procedures for health and safety issues.
Be able to solve scientific problem-solving related to air, water, and noise& land pollution.

Course Outcome:

After completion of this subject students will be able to:

CO1 : explain the mathematics and calculations of population growth, material balance and sustainable development.
CO2 : explain the components and diversity of eco system.
CO3 : explain fundamental knowledge of air pollution, calculations of earth's surface temperature, atmospheric window and lapse rate.
CO4: understand fundamental knowledge of water pollution and its consequences knowledge and calculations regarding BOD, COD.
CO5: analyze the basic concepts regarding noise and musical sound, decibel unit and its relation with sound intensity, reasons and consequences of noise pollution.
CO6: analyze the concepts of land pollution and its remedies.

1.General

Natural Resources: Forest Resource, water resource, mineral resource, energy resources (renewable, non-renewable, potentially renewable)
1.2 Population Growth: Exponential Growth, logistic growth, Maximum sustainable yield
1.3 Disaster Management: Types of disasters (Natural & Man-made), Floods, Earthquake, Tsunamis, Cyclones, landslides (cause, effect & control)
1.4 Ecology & Ecosystem: Elements of ecology, definition of ecosystem- components types and function, Food chain & Foodweb, Structure and function of the following ecosystem:
Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems **1.5 Environmental Management**: Environmental impact assessment, Environmental laws and protection act of India, Different international environmental agreement.

2. Air pollution and control

2.1Sources of Pollutants: point sources, nonpoint sources and manmade sources primary & secondary pollutant
2.2 Types of air pollutants: primary & secondary pollutant ; Suspended particulate matter, oxides of carbon, oxides of nitrogen, oxides of sulphur,particulate,PAN, Smog (Photochemical smog and London smog),
2.3Effects on human health & climate: Greenhouse effect, Global Warming, Acid rain, Ozone Layer Depletion
2.4 Air pollution and meteorology: Ambient Lapse Rate, Adiabatic Lapse Rate, Atmospheric stability &

Temperature inversion
2.5 control of air pollution (ESP, cyclone separator, bag house, catalytic converter, scrubber (ventury)

3. Water Pollution

3.1 Classification of water (Ground & surface water)
3.2 Pollutants of water, their origin and effects: Oxygen demanding wastes, pathogens, nutrients, Salts, heavy metals, pesticides, volatileorganiccompounds.
3.3 Surface water quality parameters: pH, DO, 5 day BOD test, BOD reaction rate constants, COD. Numerical related to BOD
Lake: Eutrophication [Definition, sourceandeffect].
3.4Ground water: Aquifers, hydraulic gradient, ground water flow(Definitiononly),ground water pollution (Arsenic & Fluoride; sources, effects, control)
Quality of Boiler fed water: DO, hardness , alkalinity, TDS and Chloride
3.7 Layout of waste water treatment plant (scheme only).

4. Land Pollution

4.1 Types of Solid Waste: Municipal, industrial, commercial, agricultural, domestic, hazardous solid wastes (bio-medical), E-waste
4.2 Solid waste disposal method: Open dumping, Land filling, incineration, composting, recycling (Advantages and disadvantages).

Noise Pollution
5.1 Definition of noise, effect of noise pollution on human health,
5.2 Average Noise level of some common noise sources
5.3 Definition of noise frequency, noise pressure, noise intensity, noise threshold limit value, equivalent noise level, L_{10} (18 hr Index).
5.4 Noise pollution control.

Course Name: Economics For Engineers
Course Code: HU 502
Contact: 3:0:0
Credits: 2
Total Contact Hours: 24

Prerequisites: Basic mathematics

Course Objective:
To develop decision making skills using basic economic Principles
To educate the students in evaluating various Business Projects

Course Outcome:
After completion of this subject students will be able to:

CO1 : Identify various uses for scares resources
CO2 : apply critical thinking skills to analyze financial data and their impacts
CO3 : analyze the key economic concepts and implement in real world problems.
CO4 : evaluate business performance through cost accounting principles

Course contents:

Module – 1
Introduction to Economics : Meaning, Nature and Scope of Economics
2L

Module – 2
Theory of Demand and Supply :Concept of demand, Determinants of demand, Individual and Market Demand, Exception to the law of demand. Concept of Supply, Shift in Demand and Supply Curve, Movement along the demand and supply curve,Determinants of equilibrium price and quantity, Elasticity of Demand and Supply. 4L

Module – 3
Theory of Production and Costs : concept of Production function, types pf Production function,Laws of returnn to scale and variable Proportion,Cost Function, Types of Cost Function, Different Cost curves, Relation between Average and marginal cost, Relationship between Short Run costs and Long Run costs,Profit maximization 6L

Module-4
Macroeconomic Aggregates and Concepts : GDP, GNP. Concepts of National Income . Concept of Business Cycle. 3L

Module -5
Inflation :Concept , Causes and Remedies of Inflation. 2L

Module -6
Accounting
Basic concept of Journal ,Preparation of Income Statement and Balance Sheet 4L

Module – 7
Cost Volume Profit Analysis:
Contribution, P/V Ratio, Break-Even Point, Margin of Safety, Short term decision making: Make or Buy, Shut-down point, Export Pricing, Opportunity and Sunk cost. 3L

Course Name: Industrial Instrumentation
Course Code: EI501
Contact:3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite: Knowledge of Sensor & Transducer, Measurement

Course Objective:
1. To understand the importance of different industrial instruments.
2. To understand the working principle of different measuring instruments.
3. To measure different physical parameters like pressure, temperature, flow rate, level etc
4. To install the different instruments.

Course Outcome:
After completion of this subject students will be able to:

CO1: explain working principle of different measuring instruments

CO2: understand the specification of different instruments and advantages and disadvantages.

CO3: measure different physical parameters like pressure, temperature, flow rate, level etc

CO4: design different instruments and install the instruments

Module I : Measurement of Pressure and Vacuum : [6L]
Manometers – U tube, Inclined Tube and Well type Manometers, Characteristics of Elastic Pressure Sensor, Bourdon Tube Pressure Gauge, Diaphragm, Bellows, Capsule Gauge, Differential Pressure Gauge, Pressure Switch, DP transmitters, McLeod Gauge, thermal conductivity gauge, ionization gauge.

Module II : Flow rate Measurement: [11L]

Types of Flow, Reynolds's number, Bernoulli's Equation, Calibration of flow meters,
Head type flow measurement – analysis and calculation - orifice, venturi, pitot tube, flow nozzle,
Variable Area Flowmeters – Glass and metal tube rotameters,
Mass flow meters : Coriolis, Thermal, Impeller type,
Electromagnetic type, Ultrasonic type, Positive displacement type

Module III : Level Measurement: [5L]
Gauge glass, Bi-Colour, Magnetic and Reflex Level Gauge, Float and displacers type instruments, Hydrostatic type level measurement, Capacitive type level instrument, Ultrasonic and Microwave type level instruments

Module IV : Temperature Measurement: [9L]
Temperature scale, Thermometers: Liquid, vapour and gas filled: construction details and comparison, Bimetal elements, Thermostats,
RTD: review of materials, construction, types; measuring circuits, ranges, errors and minimization of errors,
Thermocouples: types, thermoelectric power, circuits, ranges, errors, cold junction compensation, compensating cables, Linearization techniques of thermocouples, Thermopile, thermowell. Thermistors,
Radiation Thermometer sensors: spectral and other characteristics, Pyrometers.

Module V: [5L]
Installation of pressure measuring instruments and Temperature elements
Pneumatic Instrumentation : Flapper nozzle system - pneumatic force balance and motion balance system , Pneumatic Transmitter.
Hazardous Area Instrumentation: Basic Concept

Course Name: Analog & Digital Communication Theory
Course Code: EI 502
Contact:3:0:0
Credits: 3
Total Contact Hours: 34

Prerequisite: Signals and Systems, Analog and digital electronic circuits

Course Objectives:
To understand the building blocks of communication system.
To prepare mathematical background for communication signal analysis.
To understand and analyze the signal flow in a communication system.
To analyze error performance of a communication system in presence of noise and other interferences.
To understand concept of spread spectrum communication system.

Course Outcome
After completion of this subject students will be able to:

CO1: understand the performance of a baseband and pass band communication system in terms of error rate and spectral efficiency.
CO2: analyze the time and frequency domain analysis of the signals in a communication system.
CO3: analyze Performance of spread spectrum communication system
CO4: design the different types of communication system with different protocols.

Module I: Elements of communication system: [10L]

The basic elements of a communication system, Concept of transmitter and receiver, origin of noise and its effects in communication system, Concept and effects of SNR and its importance in system design.
Linear (AM) modulation, Generation and demodulation of AM wave. Concept of DSBSC, SSBSC and brief discussion of VSBSC. Concept of QAM.
Basic principle of nonlinear (FM, PM) modulation and their relations. Generation and demodulation of FM waves.

Module II: Sampling and Pulse Modulation techniques: [8L]

Sampling theorem, sampling rate, impulse sampling, natural & flat topped sampling, reconstruction of signal from samples, Concept of Aliasing and anti-aliasing filter.
Quantization noise, Uniform quantization, Non-uniform quantization, A-law and μ-law.
A/D and D/A conversion techniques, Concept of Bit rate, Baud rate, M-ary encoding.
Analog pulse modulation-PAM, PWM, PPM.
Fundamentals of PCM, Block diagram of PCM, basic concept of Delta modulation, Adaptive delta modulation.
Introduction to DPCM.
Different types of multiplexing: TDM, FDM.

Module III: Digital Transmission: : [8L]

Basic concept of Digital communication, comparative study of digital communication and analog communication.
Encoding, coding efficiency. Line coding & its desirable properties, Different types of line coding: NRZ & RZ, AMI, Manchester coding and their spectra.
Base band pulse transmission, optimum filter, Matched filter and correlation filter, Inter Symbol Interference (ISI), Eye pattern, Signal power in binary digital signal.

Module IV: Digital carrier modulation & demodulation technique: [6L]
Introduction to the digital modulation techniques- ASK. FSK, PSK, BPSK, QPSK, M-ary PSK and their comparisons.
Basic concept of spread spectrum modulation and CDMA.

Module V: Introduction to coding theory: **[4L]**

Introduction, Measurement of Information and its unit, Entropy, Mutual information, Information rate, Basic principle of error control & error correction coding.

Text Books:

1. Modern Digital and Analog Communication systems, B.P. Lathi, Oxford University press
2. Communication Systems (Analog and Digital), Dr. Sanjay Sharma, S. K. Kataria& Sons
3. Analog communication system, P. Chakrabarti, Dhanpat Rai & Co.
4. Principle of digital communication, P. Chakrabarti, Dhanpat Rai & Co.

Reference Books:

1. Digital and Analog communication Systems, Leon W Couch II, Pearson, Education Asia.
2. An Introduction to Analog and Digital communication, Simon Haykin, Wiley India.
3. Principles of Communication Systems, Taub and Schilling, Tata McGraw-Hill Education

Course Name: Control Engineering
Course Code: EI 503
Contact:3:0:0
Credits: 3
Total Contact Hours: 33

Prerequisite:

The students to whom this course will offer must have the Knowledge of electrical measurement systems, basic laws of mathematics and formulation of the differential equations.

Course Objective:
1. To construct the model of a physical dynamical system by a linear time invariant ordinary differential equation
2. To analyze the under-damped, over-damped and critically damped cases of a second order system in time domain.
3. To illustrate the effects of poles and zeros location in the s-plane on the transient and steady state behaviour of a system.
4. To determine the system stability in frequency domain.
5. To explain the effects of Lead, Lag and Lag-Lead compensator on second order System

Course Outcome:

CO1: Apply Laplace transform and state space techniques to model dynamic systems.
CO2: Demonstrate an understanding of the fundamentals of control systems.
CO3: Analyze the system behaviour in frequency domain & the system stability using compensator.
CO4: Determine the time domain responses of first and second-order systems.

Course Content:

Module I: Mathematical Model of Physical System & Analysis in Time Domain (12L)

Introduction to Elementary control concepts:-Brief introduction, Applications area. Open loop and close loop system and their comparison. Mathematical Model of Physical Systems:- Introduction, Differential equation representation of physical systems, Transfer function concepts, Block diagram algebra, Signal flow graphs :- Mason's gain formula. Time Response Analysis: - Introduction, Review of standard test signals-Step , Ramp , Impulse , sinusoid .Time response of first order system, Design specifications of first order systems, Time response of second order systems, Design specifications of second order systems.

Module II: Stability Analysis of System in Time Domain (10L)

Stability Analysis in Time Domain: The concept of stability, Assessment of stability from pole positions, Necessary conditions for stability, Routh Stability Criterion, Relative stability analysis, Illustrative examples. Root Locus Technique: Introduction, The root locus concept, Root locus construction rules, Root contours, Advantages & limitations, Relative stability analysis using root locus.

Module III: Stability Analysis of System in Frequency Domain (11L)

Frequency Response Analysis: Introduction, Performance Indices ,Frequency response of second order systems, Polar plots, Bode plots, All pass systems, Minimum-phase and Non-minimum-phase systems, Assessment of relative stability – Gain Margin and Phase Margin, examples. Stability Analysis in Frequency Domain: Introduction, A brief review of Principle of Argument, Nyquist stability criterion, Illustrative examples. Introduction to Design: The design problem, Concepts of cascade and feedback compensation, Realization of basic compensators- Lead, Lag, Lag-Lead compensator. State variables: Concepts of state, state variables and state model, State models of linear continuous-time systems, Concept on Controllability and Observability.

Course Name: Optoelectronics And Fibre Optic Sensors
Course Code: EI 504A
Contact: 3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite: Knowledge of optics and semiconductor physics

Course Objective:

1. To make the learners understand the different aspects of optoelectronic sources
2. To make the learners understand the different aspects of optoelectronic detectors
3. To make the learners understand the different aspects of optical fiber
4. To make the learners understand the application and advantages of different fiber optic sensors

Course Outcome:
After the completion of the course, earner will be able to:

CO1: compare double heterojunction LED, surface emitter LED, edge emitter LED, superluminescent LED, and semiconductor based LASER (p-n junction laser, double heterojunction laser, stripe geometry) as optoelectronic sources based on working principles and applications
CO2: compare optoelectronic detectors (p-n photodiode, p-i-n photodiode, avalanche photo diode, Schottky photodiode, hetero junction diode, phototransistor, LDR, photovoltaic cells, photo emissive cells) based on detector parameters, which are responsivity, efficiency, and working principle
CO3: apply the suitable optical fiber for an engineering application, based on number of modes required, distance to be covered and V-parameter
CO4: justify the selection of intensity modulated fiber optic sensors, phase modulated fiber optic sensors, and spectrally modulated fiber optic sensors for engineering applications, which are measurement of temperature, pressure, displacement, and liquid level. Justify optical fiber as communication channel,

Course content:

Module I: Optoelectronic sources and laser (8L)
Optoelectronics: Characteristics of optical emission, electro-luminescence, optical emission from p-n junction, direct bandgap and indirect band gap materials.
LED: spontaneous emission, power and efficiency calculation, materials of LED, structure of LED and its characteristics, double heterojunction LED, surface emitter LED, edge emitter LED, superluminescent LED.

Laser: Einstein relations, population inversion, 3- and 4-energy level systems, optical pumping, modes of laser, lasing materials-gaseous, liquid, and solid.
Semiconductor based lasers – p-n junction laser, double heterojunction laser, stripe geometry.
Holography.

Module II: Optoelectronic detectors (8L)
Optical detection principle, quantum efficiency, responsivity.
Photo diode: p-n photodiode, p-i-n photodiode, avalanche photo diode, Schottky photodiode, hetero junction diode, phototransistor
LDR, photovoltaic cells, photo emissive cells - types, materials, construction, response.
Opto-couplers – components, characteristics, noise figures, applications

Module III: Optical fiber and fiber optics (8L)
Fiber optics: Optical fiber – materials, construction, step index and graded index fibres, ray propagation. Modes in optical fibres, intermodal dispersion. Single mode and multimode fiber, attenuation and dispersion in single mode

and multimode optical fibers
Active fiber
Optical fiber coupling- splices and connectors

Module IV: Fiber optic sensors (12L)
Fibre-optic sensors: advantages, intrinsic and extrinsic sensors
Classification- intensity modulated sensors, phase modulated sensors, spectrally modulated sensors.
Fibre optic sensors for Industrial applications: temperature, displacement, pressure and liquid-level sensors.
Fiber optic interferometer- Mach –Zahnder interferometer, Sagnac interferometer

Fiber optic communication
Introduction, block diagram of basic fiber optic communication system, advantages and disadvantages, introduction to repeater, comparison of WDM and OFDM

Course Name: Soft Computing
Course Code: EI 504B
Contact:3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite: Knowledge of set theory, nervous system, and biological evolution

Course Objective:

1. To make the learners understand the advantages of soft computing techniques
2.To make the learners understand the different aspects of fuzzy logic and fuzzy reasoning
3. To make the learners understand the different aspects of artificial neural networks
4.To make the learners understand the different aspects of genetic algorithm

Course Outcome:
After the completion of the course, earner will be able to:

CO1: explain the use of fuzzy logic for decision making in presence of uncertainty
CO2: explain a fuzzy logic control system for a continuous-time plant with single i/p-single o/p
CO3: analyze the operation of genetic algorithm based optimization technique
CO4: compare the supervised and unsupervised learning techniques in artificial neural networks

Course content:
Module I: Soft Computing and Fuzzy logic (10L)
Soft-computing-definition, advantage over conventional computing, areas of application
Fuzzy Sets, membership function and membership value, linguistic variable

Fuzzy operators, T- Norms and S- Norms
Fuzzy relations, implications, cylindrical extensions, projection
Fuzzification and defuzzification

Module II: Fuzzy reasoning and fuzzy logic control (12L)
Fuzzy extension principle, compositional rule of inference, approximate reasoning (fuzzy reasoning)
Different Fuzzy models-Mamdani's model, Sugeno's model (T-S-K model)
Fuzzy logic control system, fuzzy PID controller

Module III: Genetic algorithm (5L)
Genetic Algorithm (GA)- basic concept, components-chromosome and gene, GA operators, methods of selection, elitism
Fuzzy-GA system

Module IV:Artificial neural networks (9L)
Artificial neural network (ANN)- basic concept, areas of application, McCulloch and Pitts model, perceptron, realization of logic gates, training of ANN, Supervised and unsupervised learning- techniques and comparison
Neuro-fuzzy system

Course Name: IoT Based Instrumentation System
Course Code: EI504C
Contact:3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite:
Microprocessor, Microcontroller & Computer Networking
Course Objective:
To introduce IOT Devices.
To acquire the basic knowledge to design & develop IOT Devices.
To Understand State of the Art – IoT Architecture.
To Understand Hardware platforms and operating systems commonly used in IoT systems.
Course Outcome:

After the completion of the course, the students will be able to

CO1: understand the building blocks of IoT Technology.

CO2: understand the application areas of IoT.

CO3: apply processors & peripherals to design & build IoT hardware.

CO4: analyze the revolution of Internet in Mobile Devices, Cloud & Sensor Networks.

Module I: Introduction to IoT: [8L]

Defining IoT, Characteristics of IoT, Physical design of IoT, Logical design of IoT, Functional blocks of IoT, Communication models, Machine-to-Machine Communications

Module II: Network & Communication aspects [8L]

Wireless medium access issues, MAC protocol survey, Survey routing protocols, Sensor deployment & Node discovery

Module III:Developing IoTs [12L]

Interoperability in IoT, Introduction to Arduino Programming, Integration of Sensors and Actuators with Arduino. Introduction to Python programming, Introduction to Raspberry Picture, developing sensor based application through embedded system platform, Implementation of IoT with Raspberry Pi

Module IV: Data handling & Domain specific applications of IoT [8L]

Data Handling and Analytics, Cloud Computing, Sensor cloud, Fog computing.
Applications: Smart Cities and Smart Homes, Smart Grid, Industrial Io

Course Name:Industrial Instrumentation Lab
Course Code :EI 591
Contact :0:0:3
Credits : 1.5

Course Objectives:

To understand the importance of calibration of different industrial instruments.
To measure different physical parameters like pressure, temperature, flow rate, level etc
To understand the working principle of different measuring instruments
To choose the suitable instrument for desired measuring parameter.

Course Outcomes:
After the completion of the course, the students will be able to:
CO1: describe the operating principles of different instruments.
CO2: measure different industrial parameter like pressure, temperature, flow, level etc.
CO3: choose the suitable instrument for desired measuring parameter.
CO4: design different smart instruments

Experiments:

1. Calibration of Pressure Gauge using Dead Weight Tester
2. Study of Thermocouple characteristics and Measurement of Temperature.
3. Study of Thermistor characteristics and Measurement of Temperature.
4. Study of RTD characteristics and Measurement of Temperature.
5. Measurement of temperature using AD590
6. Measurements of flow rate and velocity of fluid flow by head type flow meter.
7. Measurements of flow rate and velocity of fluid flow by Variable Area type flow meter
8. Measurement of level using capacitive type level instrument.
9. Measurement of moisture using moisture analyzer
10. Measurement of viscosity
11. Innovative Experiment

Course Name:Analog & Digital Communication Lab
Course Code :EI 592
Contact :0:0:3
Credits : 1.5

Course Objective:

The course objectives are to enable the students to
Understand the fundamental concepts of communication systems.
compare different analog modulation schemes.
compare different digital modulation schemes.
design tradeoffs and performance of communications systems.
Design the practical communication systems

Course Outcome:

CO1: To learn signal and linear time invariant system properties.
CO2: Study, design, and build modulation systems examining trade-offs indifferent communication systems.
CO3: To be able to perform experiments in converting analog information into digital data via sampling, quantization, and coding.
CO4: To be able to choose necessary modulation technique for specific signal transmission.

Experiments: -

1. Observation of modulation index in Amplitude modulation and construction of envelope for different values of modulation index.
2. Observation and generation of Double Side Band Suppressed Carrier (DSB-SC) signal.
3. Observation and generation of Single Side Band Suppressed Carrier (SSB-SC) signal.
4. Observation of Frequency Modulation & Demodulation and calculation of modulation index.
5. Generation of Time Division Multiplexing (TDM) &Demultiplexing interlacing several sampled signal using PAM.
6. To interpret Pulse Amplitude Modulation (PAM) and demodulation for various modulating voltages.
7. Generation of Pulse Width Modulation (PWM) and demodulation for various modulating voltages.
8. To analyze a FSK modulation system and interpret the modulated and demodulated waveforms.
9. Innovative Experiment

Course Name: Control Engineering Laboratory
Course Code :EI 593
Contact :0:0:3
Credits : 1.5

Prerequisite:
Student should have the knowledge of MATLAB with SIMULINK
Course Objective:

1. Will have a strong knowledge on MATLAB software..
2. They get the basic knowledge on practical control system.
3. To get the Design applications of control system.
4. They get the knowledge of stability analysis of different control systems.

Course Outcome:

The students will be able to:

CO1. Apply the concept of transfer functions for given control system problems.
CO2. Demonstrate an understanding of the fundamentals of control systems.
CO3. Analyze time response of given control system model.
CO4. Analyze the system behaviour through Root Locus, Bode plots & Nyquist plot fora given control system model.

List of Experiments:

1. Familiarization with MATLAB & SIMULINK control system toolbox.

2. Study of impulse, step, ramp & sinusoidal response for first and second order system with unity feedback and calculation of parameters for different system designs.

4. Modelling of a first order system and its response analysis.

5. Modelling of a second order system and its response analysis.

6. Simulation of impulse response for types 0, 1 and 2 with unity feedback using MATLAB.

7. Determination of root-locus, using MATLAB toolbox for a given second order transfer function and analysis of result.

8. Bode plot, using MATLAB toolbox for a given second order transfer function and analysis of result.

9. Nyquist plot using MATLAB toolbox for a given second order transfer function and analysis of result.

10. Study of position control system (AC/DC).

11. Innovative Experiment

Course Name: Constitution of India
Course Code: MC501
Contact: 3:0:0
Total Contact Hours: 32
Prerequisite: NA
Course Outcome:
Student will be able to:
CO1: Develop human values, create awareness about law ratification and significance of Constitution
CO2: Comprehend the Fundamental Rights and Fundamental Duties of the Indian Citizen to implant morality, social values and their social responsibilities.
CO3: Create understanding of their Surroundings, Society, Social problems and their suitable solutions.
CO4: Familiarize with distribution of powers and functions of Local Self Government.
CO5: Realize the National Emergency, Financial Emergency and their impact on Economy of the country.
Course content:
1. Meaning of the constitution law and constitutionalism (2L)
2. Historical perspective of the Constitution of India (2L)
3. Salient features and characteristics of the Constitution of India (1L)
4. Scheme of the fundamental rights (2L)
5. The scheme of the Fundamental Duties and its legal status (2L)
6. The Directive Principles of State Policy – Its importance and implementation (2L)
7. Federal structure and distribution of legislative and financial powers between the Union and the States (3L)
8. Parliamentary Form of Government in India – The constitution powers and status of the President of India (2L)
9. Amendment of the Constitutional Powers and Procedure (2L)
10. The historical perspectives of the constitutional amendments in India (2L)
11. Emergency Provisions: National Emergency, President Rule, Financial Emergency (3L)
12. Local Self Government – Constitutional Scheme in India (3L)
13. Scheme of the Fundamental Right to Equality (2L)
14. Scheme of the Fundamental Right to certain Freedom under Article 19 (2L)
15. Scope of the Right to Life and Personal Liberty under Article 21. (2L)

Text Books:
1. Introduction to Constitution of India, D.D. Basu, Lexis Nexus
2. The Constitution of India, PM Bhakshi, Universal Law

*Students may choose either to work on participation in all the activities of Institute's Innovation Council for eg: IPR workshop/ Leadership Talks/ Idea/ Design/ Innovation/ Business Completion/ Technical Expos etc. Innovative activities to be evaluated by the Programme Head/ Event coordinator based on the viva voce and submission of necessary certificates as evidence of activities.

Course Name: Process Control-1
Course Code: EI601
Contact:3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite: Knowledge of Control Theory

Course Objective:

This course helps the student

1. To have a knowledge on basic process control loop & characteristics
2. To understand the different controller modes
3. To know about methods of tuning of controllers
4. To have a knowledge of final control element & different actuators
5. To apply the knowledge of Cascade, Ratio, Feed forward control to control a complex process
6. To provide knowledge levels needed for PLC programming and functioning.

Course Outcome:
Upon successful completion of the course students will be able to:

Upon successful completion of the course students will be able to:
CO1: Describe different advanced control strategy
CO2: State the operation and use of final control element
CO3: Calculate controller parameters by applying different tuning methods
CO4 : Design a controller by applying the knowledge of different control action
CO5 : Write ladder logic programs and understand basics of DCS

Module I: [10]
General Review of Process, Process Control and Automation. Servo and Regulatory Control, Basic process Control loop block diagram. Characteristic parameters of a process – Process Quantity, Process Potential, Process Resistance, Process Capacitance, Process Lag, Self Regulation Characteristics and functions of different modes of control actions : Schemes and analysis of On-Off, Multistep, Floating, Time Proportional, Proportional, Integral, Derivative, PI,PD & PID control Electronic PID controller design, Pneumatic Controllers - brief analysis

Module II:[5]
Process Reaction Curves, Controllability - using (i) deviation reduction factors (ii) gain bandwidth product, State Controllability ,Tuning of Controllers: both Closed and Open loop methods (Ziegler – Nichols, Cohen – Coon, PRC method and 3-C method of parameter adjustment)

Module III:[12]
Different control strategies - schemes, brief analysis and uses
(i) Ratio control
(ii)Cascade control
(iii)Feedforward control
(iv)Multivariable control
Final Control Element: Actuators (Pneumatic Actuators, Electrical Actuators) and Control Valves (Globe, Ball, Butterfly, Gate, Pinch), Different Parts, Fail Position, Valve characteristics, Cv, Single & Double Seated Valves, Valve sizing, Valve selection, Cavitation, Flashing, Noise
Control Valve Accessories – Air Filter Regulator, I/P Converter
Brief study of Safety Valves and Solenoid valves

Module IV:[9]
Introduction to Programmable Logic Controllers (PLCs) – Basic Architecture and Functions; Input-Output Modules and Interfacing; CPU and Memory; Relays, Timers, Counters and their uses; PLC Programming and Applications.
Introduction to DCS: overview, block diagram

Books:
1) D. Patranabis, Principles of Process Control, TMH, New Delhi, 2nd Ed.

Course Name: Biomedical Instrumentation
Course Code: EI 602A
Contact:3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite: Sensors & Transducers, Signal Processing

Course Objectives:
1. To understand the various systems of the human physiology and signals of biological origin obtained from various systems,
2. To analyse various biosensors, transducers and bio-potential electrodes used to acquire various bio-potentials.
3.To understand various methods of measurement of blood pressure, blood flow, heart sounds and pacemaker
4. To familiarize with various amplifiers for measuring biopotentials.
5. To acquire knowledge about Electrical safety of medical devices and their protective measures.

Course Outcome

After completion of this course, the students will be able to
CO1: understand the detailed physiology of various human anatomical systems.
CO2: identify proper transducer for acquisition of a particular bioelectric potential.
CO3: analyse various biological conditions from the measured bioelectric potentials.
CO4: design biotelemetry systems for acquiring bioelectric potentials from long distance.

Module I: Physiology of various anatomical systems:[6L]
Introduction to the physiology of cardiac, nervous, muscular and respiratory systems

Module II: Bioelectric potential and measuring transducers: [8L]
Bioelectric potentials: Definitions, types, range, basic characteristics. resting and action potential
Different types of transducers and electrodes: construction, selection for acquiring various bio-potentials

Module III: Measurements on cardiovascular and respiratory system [12L]
Blood pressure - characteristics of blood flow - Heart sounds - ECG - Measurement of blood pressure, blood flow, heart sounds and Cardiac pace-maker: types and its detail instrumentation.

Module IV: Electrical activities in brain and muscles: [2L]
Electromyography and Electroencephalograph: characteristics, measurements and signal analysis.

Module V: Medical Imaging Techniques [4L]
Ultrasound imaging and IR Imaging: image acquisition technique and analysis, MRI

Module VI: Biotelemetry [2L]
Transmission and Reception aspects of Biological signals over long distances.

Module VII: Measurement Errors and safety issues [2L]
Errors in bio-potential measurement, types and methods to minimize errors
Electrical- Safety codes and standards, basic approaches to protection against shock, power distribution protection, equipment protection

Text Books:
1. Cromwell L – Biomedical Instrumentation and Measurement, Pearson
2. Khandpur R.S., Hand book of Biomedical Instrumentation, Tata McGraw Hill
3. Webster J S – Medical Instrumentation – Application and Design
4. Astor B R – Introduction to Biomedical Instrumentation and Measurement, McMillan.
5. Chatterjee Miller – Biomedical Instrumentation, Cengage Learning

Course Name: Advanced Sensors
Course Code: EI 602B
Contact: 3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite:

Student should have Knowledge of Sensor & Transducer; Fabrication techniques.

Course Objective:

1. To understand basics of sensors, actuators and their operating principle.
2. To educate the students on different types of microfabrication techniques for designing and developing sensors (Several applications from Electronics to Biomedical will be covered).
3. To explain working of various types of electrochemical sensors and actuators.
4. To provide information about interfacing of sensors and signal conditioning circuits to establish any control system or monitoring system.
5. To provide an understanding on characteristic parameters to evaluate sensor performance.

Course Outcome:

After completion of this course, the students will be able to:

CO1 Explain different techniques of sensors designing parameters.
CO2 Analyze the specification of different types of sensors.
CO3 Determine and compare the different micro sensor development technique.
CO4 Design the micro sensors using different technique.

CourseContent:

Module I: Sensor Signal conditioning & Reliability [12L]

Design techniques of signal conditioning for different sensors
Sensor reliability, reliability models and testing, ageing tests, failure mechanisms and their evaluation, stability studies

Module II: Micro Sensor & MEMS: Introduction & Application [12L]

Historical Development of Microelectronics, Evolution of Micro sensors, Evolution of MEMS, Emergence of Micro machines, Sensor Systems, Sensors types and classification, Mechanical Sensors, Acoustic Sensors, Magnetic Sensors, Thermal Sensors, Optical sensors Chemical Sensors, Radiation Sensors and Biosensors. Micro sensors, Sensors based on surface-acoustic wave devices. Review of Fabrication Techniques (Lithography, PVD, CVD, RIE), Applications

Module III: Smart Sensors [12L]

Importance and Adoption of Smart Sensors, Architecture of Smart Sensors: Important components, their features, Fabrication of Sensor and Smart Sensor: Electrode fabrication: Screen printing, Photolithography, Electroplating Sensing film deposition: Physical and chemical Vapour, Anodization, Sol- gel, Interface

Electronic Circuit for Smart Sensors and Challenges for Interfacing the Smart Sensor, Usefulness of Silicon Technology in Smart Sensor and Future scope of research in smart sensor

Text Books:

Course Name: Non Destructive Testing and Ultrasonic Instrumentation
Course Code: EI602C
Contact: 3:0:0
Credits: 3
Total Contact Hours: 36

Course Objective:

The objective is to impart an in-depth knowledge on the various Non Destructive Evaluation and Testing methods, theory and their industrial applications.
This course Non Destructive Testing and Ultrasonic Instrumentation (EI602C)helps the student
To introduce the basic principles, techniques, equipment, applications and limitations of NDT methods
To enable selection of appropriate NDT methods
To identify advantages and limitations of nondestructive testing methods

Course Outcome:

On the completion of this course, students will be able to

CO1: Understand the concept of non destructive testing
CO2: Describe the various types of NDT tests carried out on components
CO3: Analyze the different types of test carried out on components and surfaces.
CO4: Determine the properties of materials suitable for NDT.

Module I: **[8L]**

Introduction and importance of NDT. General Principles and Basic Elements of NDT ,
Overview of the Non Destructive Testing Methods
Surface feature inspection and testing: General, Visual, Chemical, and Mechanical
Optical - laser probe, holography

Module II: **[6L]**
Magnetic - magnetization, flux, and Electro potential, Electrical resistivity,
Electromagnetic - eddy current techniques, Penetrant, Radiation backscatter

Module III: **[8L]**
Sub - surface (Internal feature inspection and Testing: Thermal - temperature sensing, Electrical resistivity
X rays - refraction / diffraction and fluorescence, Gamma rays - radiography. IQI (image quality indicator),
Xerography,
Image intensification methods, Electron microscopic techniques. ISO specifications and other certifications.

Module IV: **[8L]**
Ultrasonic waves, Basic principle of propagation, Principle of Ultrasonic Test, Their Advantages and limitations
Ultrasonic Test methods: Echo, Transit time, Resonance, Direct contact and immersion types
longitudinal and shear wave methods, acoustic emission methods
Ultrasonic surface wave probing

Module V: **[6L]**
Ultrasonic methods of measuring thickness, depth, flow, level etc. Various parameters affecting ultrasonic testing and measurements, their remedy

TEXT BOOKS-
1. Mclutive p (Ed) – NDT Handbook, American Society for NDT, 1989.
2. Hull B and John V – Non Destructive Testing, FI BS/McMillan.
3. Krantkramer - Ultrasonic Testing of materials, Springer 2005
4. Handbook of Nondestructive Testing, McGraw Hill, 1998

Course Name: Analytical Instrumentation
Course Code: EI603A
Contact: 3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite: Knowledge of measurement methods of various process parameters

Course Objective:
1. To elaborate the physical properties of samples like pH, viscosity, humidity and moisture
2. To analyze various methods to identify the compositions of various media
3. To explain the function and importance of analyzer sample systems.
4. To describe the operating principles of numerous types of analytical instruments and analyzers.

Course Outcome:

After completion of the course, the students will be able to

CO1: explain the physical properties of samples like pH, viscosity, humidity and moisture.
CO2: describe the composition of various gas and liquid samples.
CO3: choose the elements present in the given sample using analytical techniues.
CO4: apply and use chromatography in real time industrial environments.

Module I:Introduction to Analytical Instrumentation [8]
Measurement of Humidity: dry & wet psychrometer, hair hygrometer, Electrolysis type hygrometer
Moisture: electrical conductivity type, capacitive method type, IR method
Viscosity: Saybolt's viscometer, rotameter type viscometer, Searle's rotating cylinder type
Density: pressure head type, buoyancy effect type, radioactive type, photoelectric type, displacer type
Gas Analysis: a) Thermal conductivity method
b) Heat of Reaction method.
Oxygen Analysis: a) Magneto Dynamic instrument (Pauling cell)
b) Thermomagnetic type or Hot wire type instrument.
c) Zirconia oxygen analyzer.

Module II: Liquid analysis **[9]**

a) Electrodes-Ion selective, Molecular selective types- their variations.
b) pH analysis: pH electrodes, circuit for pH measurement and applications.
c) Conductivity cells – standards, circuits.
d) Polarography- apparatus, circuits and techniques-pulse polarography, applications
e) Colorimetry

Module III: Spectroscopic Methods **[12]**

Introduction, Laws relating to absorption of radiation, Molecular Absorption Spectroscopy in UV & VIS ranges: sources, wavelength selectors, sample container, detectors
Spectrophotometers (Single beam & Dual beam arrangement)
Atomic Absorption & Emission spectroscopy : Atomizers, sources, single & dual beam arrangement.
Atomic X Ray spectrometry : Absorption & diffraction phenomena, sources, detectors, techniques. IR Spectroscopy : sources, monochromators, detectors. IR Spectrometer, FT-IR spectrometers.
Introduction to NMR

Module IV: Chromatography **[7]**

Introduction, basic definitions, some relationships. Gas chromatography : basic parts, columns ,detectors, techniques. LC : types, HPLC : basic parts, sample injection system, column, detectors, Applications..

Books:

Principles of Industrial Instrumentation- D.C. Patranabis, Publisher: Tata McGraw Hill
Analytical Instrumentation- B.G. Liptak
Principles of Instrumental Analysis- Skoog, Holler, Nieman, Publisher: Thomson Brooks/Cole
Introduction to Instrumental Analysis- Robert D. Braun, Publisher: Pharma Book Syndicate
Handbook of Analytical Instruments- R.S. Khandpur, Publisher: Tata McGraw Hill

CO-PO-PSO Mapping:(DETAILED; HIGH:3; MEDIUM:2; LOW:1**):**

Course Name: Non-Conventional Energy Sources
Course Code: EI603B
Contact: 3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite:
Student requires the knowledge of basic chemistry & physics; Knowledge of basic thermodynamics.

Course Objective:

1. To know different nonconventional energy resources.
2. To explain the different techniques of energy extraction from non-conventional energy resources.
3. To understand and compare the different energy conversion technique technique.
4. To choose and design the energy conversion plant after survey the suitability fruitfulness of the plant.

Course Outcome:
Student will be able to
CO1 Explain the different non-renewable sources.
CO2 Apply solar energy in different Field using photo voltaic cells.
CO3 Analyses the performance and testing of different energy resources.
CO4 Design parameters of the nonconventional energy plants.

Course Content:

Module I: Introduction to Energy Sources [2L]

Renewable and non-renewable energy sources, energy consumption as a measure of Nation's development; strategy for meeting the future energy requirements Global and National scenarios, Prospects of renewable energy sources. Impact of renewable energy generation on environment.

Module II: Solar Energy & Applications photovoltaic cell [10L]

Solar radiation: beam and diffuse radiation, solar constant, earth sun angles, attenuation and measurement of solar radiation, local solar time, derived solar angles, sunrise, sunset and day length. Flat plate collectors and their materials, applications and performance, focusing of collectors and their materials, applications and performance; Photovoltaic - solar cells, different types of PV Cells, Mono-poly Crystalline and amorphous Silicon solar cells. Design of PV array. Efficiency and cost of PV systems & its applications. PV hybrid systems**.** Types and performance characteristics. Characteristics equivalent circuit photo voltaic effect photo voltaic for battery charging applications. Solar air heaters-types, solar driers, storage of solar energy-thermal storage, solar pond , solar water heaters, solar distillation, solar still, solar cooker, solar heating & cooling of buildings, Solar thermal power plants, thermal energy storage for solar heating and cooling, limitations. Solar cell power plant and limitations solar collectors.

Module III: Biomass Energy Systems: [4L]
Availability of Biomass and its conversion theory, production processes, Gasification, Anaerobic Digestion, Pyrolysis, Biogas, performance analysis and testing.

Module IV: Wind Energy: [8L]
Wind distribution, principles of wind energy conversion basic components of wind energy conversion advantages and disadvantages, principles of operation of wind turbines, types of wind turbines and

characteristics, Generators for wind Turbines, Control strategies. Performance and limitations of energy conversion systems.

Module V: Geothermal Ocean, wave & Tidal Energy [8L]

Resources of geothermal energy, thermodynamics of geothermal energy conversion- electrical conversion, non-electrical conversion, environmental considerations. Principle of working of various types of fuel cells and their working, performance and limitations. Ocean Thermal Energy conversion: Availability, theory and working principle, performance and limitations. Wave and Tidal wave: Principle of working, performance and limitations, waste recycling plants.

Course Name: Artificial Intelligence
Course Code: EI 603C
Contact:3:0:0
Credits: 3
Total Contact Hours: 35

Prerequisite:
Basics of Design and Analysis of Algorithm.
A solid background in mathematics, includingprobability.

Course Objectives:
1. To learn the overview of artificial intelligence principles andapproaches.
2. To develop a basic understanding of the building blocks of AI as presented in terms of intelligentagents.
3. This course also covers fundamental areas of Local Search Algorithms, Adversarial Searching and NeuralNetworks.

Course Outcome

On completion of the course students will be able to
CO1: **Understand** the concepts of Artificial intelligence
CO2: **Analyze** the dimensions along which agents and environments vary, along with key functions that must be implemented in a general agent
CO3: **Develop** intelligent algorithms for constraint satisfaction problems and also design intelligent systems for Game Playing
CO4: **Represent** knowledge of the world using logic and infer new facts from that Knowledge andworking knowledge in PROLOG in order to write simple PROLOG programs and exploremore sophisticated PROLOG code on their own.

Module 1: Basics of AI [7L]
Introduction [2]
Overview of Artificial intelligence- Problems of AI, AI technique, Tic - Tac - Toe problem.
Intelligent Agents [2]
Agents & environment, nature of environment, structure of agents, goal based agents, utility based agents, learning agents.
Learning [3]
Forms of learning, inductive learning, learning decision trees, explanation based learning, learning using relevance information, neural net learning & genetic learning.

Module 2: Different types of searching algorithms [12L]

Problem Solving [2]
Problems, Problem Space & search: Defining the problem as state space search, production system, constraint satisfaction problems, issues in the design of search programs.
Search techniques [3]
Solving problems by searching: Problem solving agents, searching for solutions; uniform search strategies: breadth first search, depth first search, depth limited search, bidirectional search, comparing uniform search strategies.
Heuristic search strategies [4]
Greedy best-first search, A* search, memory bounded heuristic search: local search algorithms & optimization problems: Hill climbing search, simulated annealing search, local beam search, genetic algorithms; constraint satisfaction problems, local search for constraint satisfaction problems.
Adversarial search [3]
Games, optimal decisions & strategies in games, the minimax search procedure, alpha-beta pruning, additional refinements, iterative deepening.

Module 3: Knowledge & Reasoning [12L]

Knowledge & Reasoning [3]
Knowledge representation issues, representation & mapping, approaches to knowledge representation, issues in knowledgerepresentation.
Using predicate logic [4]
Representing simple fact in logic, representing instant & ISA relationship, computable functions & predicates, resolution, natural deduction.
Representing knowledge using rules [2]
Procedural verses declarative knowledge, logic programming, forward verses backward reasoning, matching, control knowledge.
Probabilistic reasoning [3]
Representing knowledge in an uncertain domain, the semantics of Bayesian networks, Dempster- Shafer theory, Fuzzy sets, and fuzzy logics.

Module 4: Different fields of AI [4L]

Natural Language Processing [2]
Introduction, Syntactic processing, semantic analysis, discourse, and pragmatic processing.
Expert Systems [2]
Representing and using domain knowledge, expert system shells, and knowledge acquisition. Basic knowledge of programming language like Prolog

Text books:
Artificial Intelligence, Ritch & Knight,TMH
Artificial Intelligence, A Modern Approach, Stuart Russel, Peter Norvig,Pearson

Recommended books:

Introduction to Artificial Intelligence & Expert Systems, Patterson,PHI
Computational Intelligence, Poole, OUP
Logic & Prolog Programming, Saroj Kaushik, New AgeInternational
Expert Systems, Giarranto,VIKAS

CO-PO-PSO Mapping:(DETAILED; HIGH:3; MEDIUM:2; LOW:1**):**

CO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO3	3	3	3	3	2	2	2	2	1	2	3	2	2	2
CO4	3	3	3	3	2	2	2	2	1	2	3	2	2	2

Course Name: Power Electronics
Course Code: EI604A
Contact:3:0:0
Credits: 3
Total Contact Hours: 35
Prerequisite: Knowledge of analog electronics & circuit theory.
Course Objective:
1. To understand the constructional features and characteristic of power semiconductor devices
2. To understand the working principle and switching operation of different semiconductor devices.
3. To prepare the students to analyze and design different power converter circuits.
4. To implement the different power supply modules.

Course Outcome:
On completion of the course students will be able to

CO1: describe the fundamental concepts and techniques used in power electronics.
CO2: explain the characteristics of SCR, BJT, MOSFET and IGBT.
CO3: analyze & design of various single phase and three phase power converter, inverters circuits and understand their applications.
CO4: develop skills to build, and troubleshoot power electronics circuits like SMPS, Intelligent power module, etc's.

Module I: Power Semiconductor Devices & switching devices:[8L]
Rectifier diodes, fast recovery diode and Schottky barrier diode, BJT, Thyristor (SCR), TRIAC, GTO, MOSFET, IGBT and MCT.

Module II: Thyristor triggering & commutation techniques:[6L]
UJT and RC triggering circuit, resonant commutation, self commutation, auxiliary commutation, Complementary commutation.

Module III: Converters: [11L]
Rectifiers: Single phase and three phase controlled bridge rectifiers, DC to DC converters (Choppers): principle of step up and step down converters, DC to AC converters (inverters) : Single phase and three phase inverters, Cycloconverters : Single phase to single phase and three phase to single phase circuits, blocked group operation, circulating current mode.

Module IV: Applications: [8L]
Modern trends in industrial drives and control; AC motor drives in transportation system and traction; induction heating, electronic ballast, UPS, Intelligent power modules.

Books:

Course Name: Industrial Drives
Course Code: EI604B
Contact: 3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite: Knowledge of Electrical Machinesand Power Electronics.

Course Objectives:

To understand the importance of different industrial drives.
To understand the working principle of different types of industrial drives.
To classifyapplications in different industries.
To understand the different control techniques of industrial drives.

Course Outcome
On completion of the course students will be able to

CO1: Demonstrate the basic requirements of dc drive and ac drive.
CO2: Illustrate the principles of speed-control of dc motors and ac motors.
CO3: Classify the industrial applications of dc drive and ac drive.
CO4**:** Apply solid state drives for speed control of various special electrical machines

Module I: AC Drives [14L]

Basic Elements of a Variable Frequency Drive (VFD), External Components in a typical Power and Control Circuit of a drive for a simple pump application, Drive Control modes: Variable Frequency Control, Sensorless Vector Control, Vector Control with sensor, Flux Vector Control, Direct Torque Control , Basic Specifications and Selection Procedure for AC Drives – with specific reference to Variable Torque and Constant Torque applications, Use of AC Drives for energy efficient production as applied to a) Pumps, Fans, Compressors, b) Hoisting, Breaking, Lowering, c) Conveyor Technology.

Module II: DC Drives [12L]

Modern DC Drives and its applications in a) Winders & Un-winders, b) Wire Drawing Machine, c) Bar Rolling Mill, d) Rotary Kiln, Basic Specifications and Selection Procedure for DC Drives.

Module III: Servo Motor and Servo Drives [10L]

Block Diagram of a typical Servo Controlled System with a) velocity and torque feedback, b) velocity and position feedback, DC and AC Servomotors, Selection of Servomotor for an application, Fundamentals of Axis Control and its implementation.

Text Books:

Course Name: ROBOTICS ENGINEERING
Course Code: EI604C
Contact:3:0:0
Credits: 3
Total Contact Hours: 36

Course Objectives:

Impart knowledge about basic mathematics related to industrial robots for their control.
Design and application of robotics & automation in modern Industries.

Course Outcome
On completion of the course students will be able to

CO1: describe kinematic and dynamic analyses with simulation. Design control laws for a simple robot.
CO2: demonstrate mechanical and electrical hardware for a real prototype of robotic device.
CO3: Select a robotic system for given industrial application.
CO4: design robots for domestic applications.

Module I: Introduction to Robotics: [6L]

Types and components of a robot, Classification of robots, Robotic kinematics systems; Concept of mechanisms and manipulators, Definition of Degrees of Freedom

Module II: Introduction to Robot Kinematics and Dynamics : [8L]

Concept of Kinematic Modeling: Translation and Rotation Representation, Coordinate transformation, Forward and inverse kinematics, Jacobian, Singularity, and Statics,Denavit–Hartenberg parameters, Concept of Dynamic Modeling such as Forward and inverse dynamics, Equations of motion by using Euler-Lagrange formulation and Newton Euler formulation.

Module III: Robotic Sensors and Actuators: [5L]

Robotic Sensor: Contact and Proximity, Position, Velocity, Force, Tactile etc. Introduction to Cameras, calibration techniques, Geometry of the Image formation, Different transforms such as Euclidean or Projective transformations, Different types of vision applications in robotics.

Actuators: Electric, Pneumatic and Hydraulic actuators, Parameters for selection of actuators, Transmission

Gears, Timing Belts and Bearings.

Module IV: Robot Control: [7L]
Basics of control: open loop and closed loop, Definition of transfer functions, Control mechanisms, P, PD, PID, Linear and Non-linear controls.

Module V: Embedded Systems for Robotics and control hardware interfacing mechanisms: [6L]

Embedded Systems, Microprocessors and Microcontroller Architecture and interfacing with robotic sensors, actuators and other components, Programming techniques for Industrial robot.

Module VI: Artificial Intelligence in Robotics [4L]

Applications in unmanned systems, examples: defense, medical, industries, etc. Robotics and Automation for Industrial benefits, Robot safety and social robotics

Text Books:
Introduction to Robotics: J. Craig, Pearson
Robot Dynamics and Control, Spong&Vidyasagar, McGraw Hill
Robotics Engineering: R. Klafter, PHI
Robotics: Subir K Saha, McGrawHill
Industrial Robotics: M. P. Groover, AshishDutta, McGraw Hill

Course Name: Data Structures & Algorithms
Course Code: EI605A
Contact: 3:0:0
Total Contact Hours: 36
Credits: 3

Prerequisites:
Familiarity with the fundamentals of C or other programming language
A solid background in mathematics, including probability, set theory.

Course Objectives:
To learn the basics of abstract data types.
To learn the principles of linear and nonlinear data structures.
To build an application using sorting and searching.

Course Outcomes:
On completion of the course students will be able to
Explain how the choices of data structure & algorithm methods impact the performance of program.
Solve problems based upon different data structure & also write programs.
Identify appropriate data structure & algorithmic methods in solving problem.
Discuss the computational efficiency of the principal algorithms for sorting, searching, and hashing
Compare and contrast the benefits of dynamic and static data structures implementations.

Course Contents:

Module I: Linear Data Structure [10L]
Introduction (2L):
Concepts of data structures: a) Data and data structure b) Abstract Data Type and Data Type.
Algorithms and programs, basic idea of pseudo-code (1L)
Algorithm efficiency and analysis, time and space analysis of algorithms – order notations (1L)

Array (2L):
Different representations – row major, column major (1L)
Sparse matrix - its implementation and usage, Array representation of polynomials (1L)

Linked List (6L):
Singly linked list – operations, Doubly linked list – operations (4L)
Circular linked list – operations, Linked list representation of polynomial and applications (2L)

Module II: Linear Data Structure [6L]
Stack and Queue (4L):
Stack and its implementations (using array and linked list) (1L)
Applications (infix to Postfix, Postfix Evaluation) (1L)
Queue, circular queue, de-queue (1L)
Implementation of queue- linear and circular (using array and linked list) (1L)

Recursion (2L):
Principles of recursion - use of stack, tail recursion. (1L)
Applications - The Tower of Hanoi(1L)

Module III: Nonlinear Data structures [12L]
Trees (8L):
Basic terminologies, forest, tree representation (using array and linked list) (1L)
Binary trees - binary tree traversal (pre-, in-, post- order) (1L)

Threaded binary tree (1L)
Binary search tree- operations (creation, insertion, deletion, searching) (1L)
Concept of Max-Heap and Min-Heap (creation, deletion) (1L)
Height balanced binary tree – AVL tree (insertion with examples only) (1L)
Height balanced binary tree – AVL tree (deletion with examples only) (1L)
m –Way Search Tree, B Tree – operations (insertion, deletion with examples only) (1L)
Graphs (4L):
Graph theory review (1L)
Graph traversal and connectivity – Depth-first search (DFS), Breadth-first search (BFS) - concepts of edges used in DFS and BFS (tree-edge, back-edge, cross-edge, and forward-edge) (2L)
Minimal spanning tree – Prim's algorithm, Kruskal's algorithm (basic idea of greedy methods) (1L)

Module IV: Searching, Sorting [8L]
Sorting Algorithms (4L):
Bubble sort, Insertion sort, Selection sort – with notion of complexity (1L)
Quick sort, Merge sort – with complexity (2L)
Radix sort – with complexity (1L)
Searching (2L):
Sequential search – with complexity (1L)
Binary search, Interpolation Search– with complexity (1L)
Hashing (2L):
Introduction to Hashing and Hashing functions (1L)
Collision resolution techniques (1L)

Course Name: Database Management System
Course Code: EI605B
Contact: 3:0:0
Total Contact Hours: 36
Credits: 3

Prerequisite:
Logic of programming language
Basic concepts of data structure and algorithms

Course Objectives
Tolearnthedata models,conceptualizeanddepicta databasesystem
To design system usingE-Rdiagram.
TolearnSQL&relationaldatabasedesign.
Tounderstandtheinternalstoragestructuresusingdifferentfileandindexingtechniques.
To know the concepts of transaction processing, concurrency control techniques and recovery procedure**.**

Course Outcomes (COs)
On completion of the course students will be able to
CO1: Apply the knowledge of Entity Relationship (E-R)diagram for an application.
CO2: Create a normalized relational database model
CO3: Analyze real world queries to generate reports from it.
CO4: Determine whether the transaction satisfies the ACID properties.
CO5: Create and maintain the database of an organization.

Course Contents:

Module 1:
Introduction [3L]
Concept & Overview of DBMS, Data Models, Database Languages, Database Administrator, Database Users, Three Schema architecture of DBMS.

Module 2:
Entity-Relationship and Relational Database Model [9L]
Basic concepts, Design Issues, Mapping Constraints, Keys, Entity-Relationship Diagram, Weak Entity Sets, Extended E-R features, case study on E-R Model. Structure of relational Databases, Relational Algebra, Relational Calculus, Extended Relational Algebra Operations, Views, Modifications Of the Database.

Module 3:
SQL and Integrity Constraints [6L]
Concept of DDL, DML, DCL. Basic Structure, Set operations, Aggregate Functions, Null Values, Domain Constraints, Referential Integrity Constraints, assertions, views, Nested Subqueries, Database security application development using SQL, Stored procedures and triggers.

Module 4:
Relational Database Design [6L]
Functional Dependency, Different anomalies in designing a Database., Normalization using functional dependencies, Decomposition, Boyce-Codd Normal Form, 3NF, Normalization using multi-valued dependencies, 4NF, 5NF , Case Study

Module 5:
Internals of RDBMS [6L]
Physical data structures, Query optimization: join algorithm, statistics and cost bas optimization. Transaction

processing, Concurrency control and Recovery Management: transaction model properties, state serializability, lock base protocols; two phase locking, Dead Lock handling

Module 6:
File Organization & Index Structures [6L]
File & Record Concept, Placing file records on Disk, Fixed and Variable sized Records, Types of Single-Level Index (primary, secondary, clustering), Multilevel Indexes

Text Books:
1. Henry F. Korth and Silberschatz Abraham, "Database System Concepts", Mc.Graw Hill.
2. Elmasri Ramez and Novathe Shamkant, "Fundamentals of Database Systems", Benjamin CummingsPublishing. Company.

Course Name: Software Engineering
Course Code: EI605C
Contact Hours: 3:0:0
Total Contact Hours: 36
Credits: 3

Prerequisites:
1. An understanding of basic computer software
2. Object Oriented programming skills.

Course Objectives:
1. To develop basic Knowledge in Software Engineering including software Engineering layered architecture, software process models for software development.
2. To design software requirements and specifications of documents.
3. To understand project planning, scheduling, cost estimation, risk management.
4. To describe data models, object models, context models, behavioral models and coding style and testing issues.
5. To know about the quality checking mechanism for software process and product.

Course Outcomes:
On completion of the course students will be able to

CO1: identify, formulate, and solve software engineering problems, including the specification, design, implementation, and testing of software systems that meet specification, performance, maintenance and quality requirements
CO2: analyze, elicit and specify software requirements through a productive working relationship with various stakeholders of the project
CO3: design applicable solutions in one or more application domains using software engineering approaches that integrates ethical, social, legal and economic concerns.

CO4: develop the code from the design and effectively apply relevant standards and perform testing, and quality management and practice.

CO5: integrate the modern engineering tools necessary for software project management, time management and software reuse, and an ability to engage in life-long learning.
Course Contents:

Module I [**10L]**
SoftwareEngineering–Characteristics,Components,Application,Definitions,Software Process models- Waterfall Model, Prototype model, Spiral., Software Project Planning-Feasibility Analysis, Technical Feasibility, Cost-Benefit Analysis, Basics of estimation : COCOMO (Basic, intermediate, Complete) model

Module II [8L]
System Analysis: Principle of Structure Analysis, Requirement Analysis, DFD, Entity Relationship Diagram, DataDictionary, Data Modeling, Software Requirements Specification
Software Design Aspects: Objectives, Principles, Concepts, HLD and LLD, Top-Down and Bottom-Updesign; Decision tree, decision table and structured English, Structure chart, Transform analysis Functional Vs. Object-Oriented approach.

Module III[10L]
Coding & Documentation–Structured Programming, Modular Programming, Module Relationship-Coupling,Cohesion, Object Oriented Programming, Information Hiding, Reuse, System Documentation.
Testing–Levels of Testing, Integration Testing, System Testing**.**
Test Cases-White Box and Black Box testing Software Quality, Quality Assurance, Software Maintenance, Software Configuration Management.

Module IV [8L]
Software Project Management – Project Scheduling, Staffing, Quality Assurance, Risk Management: Reactive vs. Proactive Risk strategies, Software risks, Risk identification, Risk projection, Risk refinement Project Monitoring.

Text Books:
1. Software Engineering: A practitioner's approach–Pressman(TMH)

Reference Books:
1. Software Engineering-Pankaj Jalote (Wiley-India)
2. Software Engineering-Rajib Mall(PHI)
3. Software Engineering–Agarwal and Agarwal(PHI)

CO5	-	-	-	-	-	-	-		2	1	2	2	1	1

Course Name: Process Control Laboratory
Course Code : EI691
Contact :0:0:3
Credits : 1.5

Course Outcome:

After completion of the laboratory course students will be able to:
CO1: Recognize & explain basic process control loop elements via hands on experiment.
CO2: explain different process variable (flow, pressure, level & temperature) using different controller mode.
CO3: apply various PLC functions and develop PLC programs to control a real time system.
CO4: explain the Control & monitor different process variable through DCS.

Experiments :

1. Study of Flow, Level, Pressure, Temperature processes and construction of the P&I diagrams in accordance with ISA guidelines / standards

2. Study of a Temperature Control Loop having Furnace, suitable final control element, Temperature transmitter, conventional PID controller/Control System, and data logger/recorder

3.Study of a Pressure Control Loop having Pressure source, Pressure Transmitter, Motorized/Pneumatic control valve, and conventional PID controller/Control System

4. Study of a Flow Control Loop having suitable Flow meter, Motorized/ Pneumatic control valve, and conventional PID controller/Control System

5.Study of a Level Control Loop having Level Transmitter, Motorized/ Pneumatic control valve, and conventional PID controller/Control System
6.Study of a typical Air Duct Flow Monitoring and Control
7. PLC Programming
8. Study of a PC based Automation Software / Simulation Software

9. Configuring the DCS for Temp./Flow/Pressure processes.

10. Innovative Experiment

CO-PO-PSO Mapping:(DETAILED; HIGH:3; MEDIUM:2; LOW:1**):**

Course Name: Power Electronics Laboratory
Course Code : EI 692A
Contact :0:0:3
Credits : 1.5

Course Objective:

To expose students to operation and characteristics of power semiconductor devices and passive components, their practical application in power electronics.
To provide a practical exposure to operating principles, design and synthesis of different power electronic converters.
To introduce students to industrial control of power electronic circuits as well as safe electrical connection and measurement practices.

Course Outcome:
At the end of the course, a student will be able to:
CO1 : Identify relevant information to supplement to the Power Electronics course & set up testing strategies and select proper instruments to evaluate performance characteristics of Power devices and power electronics circuits and analyze their operation under different loading conditions.
CO2: Realize the limitations of computer simulations for verification of circuit behavior, apply these techniques to different power electronic circuits and evaluate possible causes of discrepancy in practical experimental observations in comparison to theory.
CO3: compute the results, incorporating accepted data analysis and synthesis methods, mathematical software,and word-processing tools.
CO4: demonstrate the ability to interact effectively on a social and interpersonal level with fellow students, and will demonstrate the ability to divide up and share task responsibilities to complete assignments.

Experiments:
1. Study of Characteristics of an SCR and a TRIAC.
2. Study of Diode-Resistance, Diode-Resistance-Capacitance, Resistance-Capacitance and UJT Triggering Circuits for SCR.
3. Study of the operation of a single phase fully controlled bridge converter supplying R-L load and freewheeling diode, including generation of triggering pulses for the devices for both continuous and discontinuous modes of conduction.
4. Study of a self commutation circuit for commutating an SCR operating on a DC supply.
5. Simulation of DC to DC step down chopper.
6. Simulation of PWM bridge inverter using MOSFET/IGBT with R/R-L load.
7. Simulation of Single phase AC regulator.
8. Study of a control circuit for a stepper motor and its operation./ Study of a single quadrant chopper controlled PM dc motor.
9.Innovative Experiment

Course Name: INDUSTRIAL DRIVES LABORATORY
Course Code :EI692B
Contact :0:0:3
Credits : 1.5

Course Objective:

Provide knowledge to operate electrical machines for a specific drive.
Study the speed control techniques of electrical machines for particular drive requirement.

Course Outcome:

At the end of this course, students will be able to:

CO1: understand the concept of different electrical drives by performing simulation and appreciate the result based on analysis.
CO2: conduct different hardware experiments on dc motor drive as well as on ac motor drive.
CO3: implement their own ideas for controlling the speed as well as other relevant parameters of different motors using PLC.
CO4: design any kind of electrical drive suitable for different industrial problems.

List of Experiments:

Study of the characteristics of a DC motor

Study of methods of speed control of DC motor

Measurement of speed of DC series motor as a function of load torque.

Polarity test on a single-phase transformer & study of different connections of three phase transformer.

Study of performance of three phase squirrel- cage Induction motor – determination of iron-loss, friction & windage loss.

Different methods of starting of a 3 phase Cage Induction Motor & their comparison [DOL, Auto transformer & Star-Delta].

Speed control of 3 phase squirrel cage induction motor by different methods & their comparison [voltage control& frequency control].

Speed control of 3 phase slip ring Induction motor by rotor resistance control.

Load test on single phase Induction motor to obtain the performance characteristics.

Load test on wound rotor Induction motor to obtain the performance characteristics.
Innovative Experiment.

Course Name: Robotics Engineering Lab
Course Code: EI692C
Contact: 0:0:3
Credits : 1.5

Course Objective:

1. Will have a strong knowledge on MATLAB software..
2. They get the basic knowledge on practical control system.
3. To get the Design applications of control system.
4. They get the knowledge of stability analysis of different control systems.

Course Outcome:

The students will be able to:

CO1: Apply formulate transfer function for given control system problems.
CO2: understand the fundamentals of control systems.
CO3: Analyze time response of given control system model.
CO4: Analyze the system behavior through Root Locus, Bode plots & Nyquist plot fora given control system model.

List of Experiments:

1. Study components of an industrial robot (PUMA, KUKA, FANUC, MTAB, UR , Etc) and its DH parameters.
2. Forward kinematics and validation using a software (Robo Analyser/MATLAB).
3. Inverse kinematics of an industrial robot and validation using any open source software.
4. Industrial Robot programming using VAL II or its equivalent.
5. Microcontroller lab – programming (8051 and upper level microcontroller).
6. Integration of assorted sensors (IR, Potentiometer, strain gages etc.), micro controllers and ROS (Robot Operating System) in a robotic system. (mainly MATLAB)
7. Control experiment using available hardware or software. (mainly MATLAB).
8. The use of open source computer vision programming tools such as MATLAB, Python, open CV.
9. Research related experiment in AI, multi agent system, unmanned systems control using ROS, etc.
10. Innovative Experiment

TextBooks:

1. Introduction to Robotics: J. Craig, Pearson
2. Robot Dynamics and Control, Spong&Vidyasagar, McGraw Hill

Name of the Paper: Data Structures & Algorithms Lab
Paper Code: EI693A
Contact Hours: 0:0:3
Credit s: 1.5

Perquisites:
Programming for Problem Solving Lab
Course Objectives:
To write and execute programs in C to solve problems using data structures such as arrays, linked lists, stacks, queues, trees, graphs, hash tables and search trees.
To write and execute write programs in C to implement various sorting and searching methods.
Course Outcomes:
The students will be able to:
CO1: Choose appropriate data structure as applied to specified problem definition.
CO2: Describe the operations like searching, insertion, deletion, traversing mechanism on various data structures.
CO3: apply practical knowledge on the applications of data structures.
CO4: analyze, store, manipulate and arrange data in an efficient manner.
CO5: implement queue and stack using arrays and linked list. Implementation of queue, binary tree and binary search tree.
Course Contents:

1. Write a C program to implement Single Link List
2. Write a C program to implement Double Link List
3. Write a C program to implement Single Circular Link List
4. Write a C program to implement Double Circular Link List
5. Write a C program to implement Polynomial addition and Polynomial multiplication using Linked List.
6. Write a C program to convert a given infix expression into its postfix Equivalent.
7. Write C programs to implement a queue ADT using i) array and ii) doubly linked list respectively.
8. Write a C program to implement Binary Search Tree (BST).
9. Write C programs for implementing the following sorting methods to arrange a list of integers in ascending order:
   Insertion sort
   Merge sort
10. Write C programs for implementing the following sorting methods to arrange a list of integers in ascending order:
    Quick sort
    Selection sort
11. Write C programs for implementing the following searching methods:
    Linear Search
    Binary Search
12. Write a C program to implement all the functions of a dictionary (ADT) using hashing.
13. Write C programs for implementing the following graph traversal algorithms:
    Depth first search
    Breadth first search
14. Innovative Experiment

Course Name: DATABASE MANAGEMENT SYSTEM LAB
Course Code: EI693B
Contact: 0:0:3
Credits: 1.5

Prerequisite:
Logic of programming language
Basic concepts of data structure and algorithms

Course Objectives
To learn the data models conceptualize and depict a database system
To learn the fundamental concepts of SQL queries.
To understand the concept of designing a database with the necessary attributes.
To know the methodology of Accessing ,Modifying and Updating data & information from the relational databases
To learn database design as well as to design user interface and how to connect with database.

Course Outcomes:
On completion of the course students will be able to
CO1: Understand the basic concepts regarding database, know about query processing and techniques involved in query optimization and understand the concepts of database transaction and related database facilities including concurrency control, backup and recovery.
CO2: Understand the introductory concepts of some advanced topics in data management like distributed databases, data warehousing, deductive databases and be aware of some advanced databases like partial multimedia and mobile databases.
CO3: Differentiate between DBMS and advanced DBMS and use of advanced database concepts and become proficient in creating database queries.
CO4: Analyse database system concepts and apply normalization to the database.
CO5: Apply and create different transaction processing and concurrency control applications.

Course Contents:
Structured Query Language
Module1: [6L]
Creating Database

Creating a Database
Creating a Table Specifying Relational Data Types
Specifying Constraints Creating Indexes

Module2: [3L]
Table and Record Handling
INSERT statement
Using SELECT and INSERT together
DELETE, UPDATE, TRUNCATE statements
DROP, ALTER statements
Module3: [6L]
Retrieving Data from a Database
The SELECT statement
Using the WHERE clause
Using Logical Operators in the WHERE clause
Using IN, BETWEEN, LIKE , ORDER BY, GROUP BY and HAVING Clause Using Aggregate Functions
Combining Tables Using JOINS
Sub-queries
Module 4: [3L]
Database Management
Creating Views
Creating Column Aliases
Creating Database Users
Using GRANT and REVOKE
Module 5:[6L]
PL/SQL
Module 6:[6L]
Database design using E-R model and Normalization
Module 7:[6L]
Design and implementation of some on line system [Library Management System]

Text Books:

SQL, PL/SQL by Ivan Bayross, BPB Publications
Oracle PL/SQL Programming, 6th Edition - O'Reilly Media By Steven Feuerstein, Bill Pribyl

Name of the Paper: Software Engineering Lab
Paper Code: EI693C
Contact Hours: 0:0:3
Credits: 1.5

Prerequisites:
For Software Engineering Lab, design a project proposal which will be used throughout the lab for performing different experiments using CASE Tools.

Course Objectives:
To learn software development skill through various stages of software life cycle. .
To ensure the quality of software through software development with various protocol based environment.

Course Outcomes:
On completion of the course students will be able to

CO1: design software development models through rational method.
CO2: design SRS document, test cases and software configuration management and risk management related document.
CO3: develop function oriented and object oriented software design using tools like rational rose.
CO4: perform unit testing and integration testing
CO5: design and apply various white box and black box testing techniques

Assignments to be given from the following
1. Preparation of requirement document for standard application problems in standard format. (e.g. Library Management System, Railway Reservation system, Hospital management System, University Admission system) .DFD of standard application problems.
2. Project Schedule preparation. Software Requirement Analysis: Describe the individual Phases/ modules of the project, Identify deliverables.
3. Use Case diagram, Class Diagram, Sequence Diagram, Activity Diagram and prepare Software Design Document using tools like Rational Rose.(For standard application problems)
4. Software Development and Debugging. Estimation of project size using Function Point(FP) for calculation.
5. Design Test Script/Test Plan(both Black box and White Box approach)
6. Compute Process and Product Metrics (e.g Defect Density, Defect Age, Productivity, Cost etc.) Cost Estimation models. COCOMO
7. Innovative Experiment

Text Book:
1. Software Engineering: A practitioner's approach–Pressman(TMH)
Reference Book:
1. Software Engineering-Pankaj Jalote (Wiley-India)

Course Name: Values and Ethics in Profession
Code:HU701
Contact: 2L: 0T:0P
Credit:2
Total Contact Hours:24
Prerequisites: Basic knowledge of engineering and management.

Course Outcome:

On Completion of this course student will be able to
CO1. Understandthecorevaluesthatshapetheethicalbehaviourofanengineerand Exposedawareness on professional ethics and human values.
CO2. Understandthebasicperceptionofprofession,professionalethics,andvariousmoral issues
CO3. Understandvarioussocialissues,industrialstandards,codeofethicsandroleofprofessionalethics in engineering field
CO4. Explain responsibilities of an engineer for safety and risk benefit analysis, professional rights and responsibilities of an engineer.
CO5. Acquire knowledge about various roles of engineers in variety of global issues and able to apply ethical principles to resolve situations that arise in their professional lives.

Module1: Introduction 4L
Definition, Relevance, Types of values, changing concepts of values, Concept of Morals and Ethics, Work ethic – Service learning – Civic virtue, Stress Management -Concept of stress, causes and consequences, managing stress.

Module2: Theories Of Self Development 4L
EmotionalIntelligence(EI):Concept,ImportanceandMeasurement,ConceptofMotivation,Maslow‘stheory, Kohlberg‘s theory.

Module3: Moral And Ethical Concerns 4L
VarietyofMoralIssues,MoralDilemmas,Natureofvalues,ValueCrisisincontemporarysociety,ValueSpectrumofagoodlife,StevenCovey‘sPursuitofExcellence

Module4: Engineering Ethics 4L
Engineeringprofession:EthicalissuesinEngineeringpractice,Conflictsbetweenbusinessdemandsandprofessionalideals,SocialandethicalresponsibilitiesofTechnologists,Codesofprofessionalethics,EthicalandUnethicalpractices– casestudies,Whistle blowing and beyond, Case studies.

Module5: Technology and Sustainable Development 8L
Rapid Technological growth and depletion of resources, Reports of the Club of Rome,Limitsofgrowth,SustainableDevelopment,EnergyCrisis,RenewableEnergyResources,Environmentaldegradationandpollution,EnvironmentalRegulations,Environmental Ethics and appropriate Technology, Movement of Schumacher,
ProblemsofTechnologytransfer,Technologyassessmentimpactanalysis,HumanOperatorinEngineering projects and industries, Problems of man, machine, interaction, Impact of assembly in and automation.

Telemetry & Remote Control
Code: EI701
Contact: 3P
Credits:3
Total contact hours: 36

Prerequisite:
Laplace transformation & Fourier transformation, Digital and Analog electronics, Digital and Analog communication, Fiber Optics, Modulation and multiplexing techniques

Course Objective:
To understand the concepts of telemetry system To understand the concepts remote sensing,
To enable selection and design of remote sensing and telemetry systems

Course Outcome:
Students will be able to
CO1: Understand the concepts and purpose of different Telemetry &Remote control systems in Instrumentation field. Identify the concepts and utilities of telemetry systems

CO2: Recognize the various Telemetry systems, coding, modulation techniques and TimeDivisionMultiplexingandFrequencyDivisionMultiplexingtechniquesandMODEMandconceptofWavepropagation

CO3: Understand the concepts and applications of satellite Telemetry

CO4: Design and implement the Remote control system for various Industrial application purposes and the guide lines for solving different industry related complex problems

Module I
Basic Concept: Telemetry:-itspurposeandapplicationpotential,basicschemes-pneumatic,current, voltage, frequency; Wired and wireless types. Concepts of Information transfer, Noise and its distribution Probability function. Bit error rate
5

Module II
DifferentMultiplexing&DemultiplexingtechniquesFDMandTDM,CDM,WDMMultipleaccessing techniques: TDMA, FDMA,CDMA, WDMA
TDM Systems: their circuits, scanning techniques; TDM-PAM, PAM-PM Systems, Synchronization, TDM-PCM System 6

Modem Protocols, Modems & Modem protocols, Synchronous protocols.WavePropagation:Aspectsofwavepropagation;SpaceandSurfacewaves 4

Module III
SatelliteCommunication:BasicconceptsofSatelliteCommunications,Orbitalparameters,

Types of Satellite orbits
SatelliteCommunication:TTandCservices,subsystems,theearthstation,Multipleaccess schemes: FDMA, TDMA, and CDMA.
Satellite Navigational System, Direct Broadcast Satellites (DBS)- Direct To Home Broadcast(DTH),Digital Audio Broadcast(DAB) 9

Module IV
Concepts of Fiber optic Communication- the Fiber as transmission medium, Interconnections, Repeaters, Sources, Detectors 3
RemoteControl:Communicationbasedprocessingcontrolsystem,pipelines,operationalsecuritysystemscomponents, pipelinecontrol,powersystemcontrol 5

Reference Books:
D. Patranabis, Telemetry principles, TMH ,New Delhi

PROCESS CONTROL- II
Code: EI702A
Contacts: 3LCredits:3
Totalcontacthours:36

Prerequisite: Knowledge of continuous time control system, process control, fuzzy logic (preferred)

Course Objective:

To make the learners apply the knowledge of discretization and reconstruction of signals, z-transform, and inverse z-transform for discrete time control system
To make the learners perform the mathematical modelling, stability analysis, modelling andtime-responseanalysisfordiscrete-timecontrolsystemanddesigndigitalPIDcontroller,dead beat controller, and controller based on Dahlin's algorithm
To make learners understand the advantage of DCS in process control and the functions of different parts of DCS
To make the learners understand fuzzification, defuzzification, linguistic variable, fuzzy reasoning, Mamdani's model, Sugeno's model, block diagram of fuzzy logic control system, and fuzzy PID controller

Course Outcome:

After the completion of the course, learner will be able to:

CO1: describe the discretization and reconstruction of a given signal by using ideal sampler and zero order hold, respectively
CO2: explain the z-transform and inverse z-transform for given functions
CO3: compute mathematical modelling, stability analysis and time response analysis of a linear time-invariant discrete-time control system
CO4: compare the fuzzy logic control system with a conventional control system
CO5: analyse the functionality of DCS in a process plant, including control, communication, protocols and network topology
CO6: design digital PID controller and deadbeat controller for linear time-invariant single i/p-single o/p system

Course content:

Module I: Signal discretization, signal reconstruction, z-transform (10L)
Digital control system with continuous process and digital controller, advantages & limitations of digital control system

Signal discretization-Sampling of continuous signal, sampling as impulse modulation, sampled spectra& aliasing, sampling theorem

Signal reconstruction–zero order hold and first order hold Mapping between s-plane and z-plane.
z-transform- advantage of z-transform,z-transformofdiscrete-timesignals,z-transformtheorems,modified z-transform, inverse z-transform, limitations of z-transform

Representation of digital control system–Linear Difference Equations, Pulse Transfer Function.
Analysis of a discrete-time single input-single output system by Z-transform techniques Stability studies for discrete-time control systems–Jury's stability criteria
w- plane transforms for discrete-time systems

Module II: Digital controllers (4L)
Designing a digital controller, physical realizability

Digital control algorithms :-
Digital PID controller
Dead beat control(c) Dahlin's algorithm

Module III:DCS (12L)
DCS –basic components and their functions.
HMI–operator& engineering interface, functions and requirements. Communication–ISO/OSI reference model; data highway and Fieldbus; HART Network access protocols – TDMA, CSMA/CD, token passing, Master – Slave Transmission media– twisted pair, co-axial, optical fiber ;
Network topology – mesh, ring, star, bus ; Redundancy–processor, bus and input-output level

Module IV: Fuzzy logic control (8L)
Fuzzy logic control– fuzzy set ,membership function, linguistic variable, fuzzy operators, fuzzy extension principle, compositional rule of inference, approximate reasoning (fuzzy reasoning) defuzzification, Mamdani's model, Sugeno's model, fuzzy logic control system, fuzzy PID controller.

Module V: Case studies (2L)
Case studies-rolling mill control (system with time delay),pH control (nonlinear system)

Text Books:

Power Plant Instrumentation
Code: EI702B
Contact: 3L
Credits:3
TotalContactHours:36
Prerequisite: Knowledge of Process Control and Power Plant

Course Objective:

The objective of this course is to provide the students with basic information to understand the concepts of industrial automation with the instruments and describe the instrumentation process associated with the functional operation of any Power plant.

Course Outcome:

Upon completion of this course, the students will be able to
CO1: understand the operational functions of building blocks of different Power plant systems.
CO2: demonstrate the measurement process in the Boiler-Turbine unit.
CO3: analyze the Boiler-Turbine unit operation with the instrumentation system.
CO4: analyze the control operations in different types of plants and understand the data handling system.

Module I:
Brief survey of methods of power generation: Hydro, thermal, nuclear, solar and wind powerIntroductiontothermalpowerplantprocesses–buildingblocks-StreamCycle [4]

Module II:
Boiler –Turbine and Associated Instrumentation Systems: Boiler – types, Boiler – turbine units and its range systems, feed water systems, steam circuits, air preheating. Soot blowers, combustion process, products of combustion, fuel systems, and treatment of flue gases, smoke density measurements, steam turbine, condensate systems, and alternator, feed water conditioning, turbine bypass valves. Importance of instrumentation in power generation – details of boiler processes, combined cycle power plant, power generation and distribution. [8]

Module III:
Measurement in boiler and turbine: Metal temperature measurement in boilers, piping System for pressure measuring devices, smoke and dust monitor, flame monitoring. Introduction to turbine supervising system, pedestal vibration,shaftvibration,eccentricitymeasurement.Installationofnon-contracting transducers for speed measurement.
Measurements in power plants: Electrical measurements – current, voltage, power, frequency, power factor etc. – non electrical parameters – flow of feed water, fuel, air and steam withcorrectionfactorfortemperature– steampressureandsteamtemperature–drumlevelmeasurement–radiationdetector –smoke density measurement – dust monitor. [11]

Module IV:
Controls in boiler: Boiler drum level measurement methods, feed water control, soot blowing operation, steam temperature control, Coordinated control, boiler following mode operation,turbinefollowingmodeoperation,selectionbetweenboilerandturbinefollowingmodes.Distributedcontrols ysteminpowerplantsinterlocksinboileroperation.Coolingsystem,Automaticturbine runs up systems. [7]

Module V:
Data handling-processing, logging, acquisition, accounting, display and storage. Instrumentation for Generator and Bus bar coupling .Instrumentation for safety interlocks- protective gears, emergency measures, Alarm systems and Analysis etc. Introduction to power plant modelling / simulation. Concept of Industry 4.0.
[6]

Plant Automation
Code:EI702C
Contact: 3LCredits:3
TotalContactHours:36
Prerequisite: Knowledge of Process Control
Course Objective:
Theobjectiveofthiscourseistoprovidethestudentwithbasicskillsusefulinidentifyingtheconceptsofautomated machines and equipment and describe the terms and phrases associated with industrial automation.
Course Outcome:

Upon completion of this course, the student will be able to
CO1: understand the operational functions of PLC,DCS and SCADA.
CO2: demonstrate the competence in maintaining and troubleshooting technology, detecting more serious problems, generating workable solutions to correct deviations and recognizing when to get additional help.
CO3: analyze Industrial Networking, Networking protocols and topologies.
CO4: analyze the automation technologies in different types of plants.

Module I:[8]
Introduction to Plant Automation, Architecture, Recapitulation Basic Components and Functions of DCS,PLC,HMI(OSandES);ISO/OSIReferenceModel;TCP/IPBasics,IndustrialEthernet,Fieldbus,Network Access Protocols, Network Topology and Arbitration Methods; Computer Integrated Processing; OPC and OLE Connectivity
Network topology, OSI reference model, TCP/IP Basics, UDP,IP,
OPC, Data connectivity issues in pre-OPC period. A client-server software architecture using OPC, OPC protocols, OPCUA

Module II:[10]
Plant Automation System network Elements of Plant Automation System (PAS) : Smart Sensors, Sensor networks, Intelligent actuators, SCADA systems, I/O Modules (wired and wireless), RTUs, AS-Interface. Safety Interlocks, Sequence Controls PAS network and typical system architecture using the above elements PAS developed into MES (manufacturing execution systems) integrated with high level software

Module III:[4]
Automation Solutions: PLC based systems; HMI and SCADA based systems PC based automation systems ,Safety in industries.

Module IV:[8]
FIELDBUS: Cloud and Edge computing – their difference, Bridging the OT and IT world, Types of IoT networks, Seven layer IoT architecture, IoT addressing
Concept of fieldbus, Advantages, Types, Topology, HART, Foundation Fieldbus: H1 and HSE, OSI reference model, DLL:MAC, LAS, Redundancy.

PROFIBUS: Types, Cyclic & Acyclic communication, Slave to slave communication, Bus access method in PROFIBUS PA.
MODBUS: Communication stack, Network architecture Intrinsically Safe Field bus Systems: Types
Wireless Field buses: WHART andISA100.11a

Module V: IIOT[6]
Introduction, What is IoT, What is IIoT, Differences between IoT and IIoT ,Evolution of IIoT, Architecture of IIoT, IIoT Characteristics, IIoT Platform, IIoT Protocols, Application Areas of IIoT, Challenges: Adaptability, Scalability, Security; Benefits of IIoT

Computer Networking
Code: EI703A
Contact (Periods/Week): 3L/WeekCredit:3
Total No. of Lectures: 36
Prerequisites:

Familiarity and knowledge of Operating Systems and Computer Architecture

Programming languages concepts like C, Java.

Course Objective:

To educate basic knowledge of networking technologies and network management concepts
To interpret the layering concepts in computer networks.

To analyse the functions of each layer and gain knowledge indifferent applications that use computer networks.
To emphasize the hand-on experience of network topology in a laboratory environment

To be familiar with contemporary issues in networking technologies.

Course Outcome:

After completion of the course students will be able to

CO1: Understand Basic introduction of Computer Network along with Physical layer of OSI and TCP/IP model.
CO2: Analyze Data link layer protocols with MAC and LAN technologies.
CO3: Design applications using internet protocols, routing and UDP, TCP.
CO4: Develop application layer protocols and understand socket programming

Module I: Introduction to Computer Network [6L]

Introduction: Computer Network, data communication , topology, OSI&TCP/IP Reference Models, layers and characteristics, Wireless Network, comparison to wired and wireless network.**[3L]**
PhysicalLayer: Overviewofdata(analog&digital),signal(analog&digital),transmission(analog&digital)&transmissionmedia(guided&unguided);Circuitswitching:timedivision
&space division switch, TDM bus; Telephone Network.**[3L]**

Module II: Data Link Layer[10L]

Framing, Error Control, Error Detection and Correction, Flow Control, Data Link Protocols, Simple Stop-and-Wait Protocol, ARQ mechanism, Sliding Window Protocols, One-Bit Sliding Window Protocol, Go-Back-N and Selective Repeat, HDLC, PPP Medium Access Control Sub-layer, The Channel Allocation.**[5L]**
MultipleAccessProtocols**:**ALOHA,CarrierSenseMultipleAccessProtocols,IEEE802.xEthernet, Switched Ethernet, Fast Ethernet, Gigabit Ethernet, 10 Gigabit Ethernet, WirelessLANs-IEEE802.xx,Bluetooth,RFID,Bridges,VirtualLANs, Switching**.[5L]**

Module III:Network Layer & Transport Layer [16L]

Network Layer:
IP Addressing, IPv_4 and IPv_6. Difference IPv_4 and IPv_6, Conversion of IPv_4 and IPv_6, Sub netting,Super netting, ARP, IP, ICMP and DHCP–Delivery protocols Other Protocols such as mobile IP in wireless Network. Routing: Shortest Path Algorithms, Flooding, Distance Vector Routing , Link State Routing, RIP, OSPF, BGP [**11L]**
Transport Layer:
ProcesstoProcessdelivery;UDP;TCP,CongestioncontrolinTCP,Qualityofservice:Techniquesto improve QoS:

Leaky bucket algorithm.**[5L]**

Module IV: Application Layer [4L]

IntroductiontoDNS,SMTP, SNMP,FTP,HTTP&WWW:Cryptography(Public,PrivateKeybased),Digital Signature, Firewalls [2L]
Socket Programming[2L]:IntroductiontoSocketProgramming,UDPsocketandTCPSocket

Computer Graphics and Multimedia
Code: EI703B
Contact (Periods/Week): 3L/Week
Credit : 3
Total No. of Lectures:36

Pre requisite:

Computer Programming, Mathematics

Course Objective:

The objective of the course is
To become familiar with various software programs used in the creation
To gain knowledge about graphics hardware devices and software used
To implement multi-media in devices and software used

Course Outcome

After completion of this course student will be able to :
CO1: Understood Different types of Multimedia File Format.
CO2: Apply Illumination, colour models and clipping techniques to graphics.
CO3: Design and apply three-dimensional graphics and transformations.
CO4: Design and apply two-dimensional graphics and transformations

Module1

INTRODUCTION TO COMPUTER GRAPHICS[2L]:
Overview of computer graphics, Basic Terminologies in Graphics, lookup table,3D viewingdevices,Plotters,printers,digitizers,lightpensetc.,Active&Passivegraphics,Computergraphicssoftware.
DISPLAYDEVICES &COLOR MODEL[3L]
Light sources, basic illumination models, halftone patterns and dithering techniques, Intuitive colour concepts, RGB colour model, YIQ colour model, CMY colour model, HSV colour model ,HLS colour model, Colour selection. Raster Scan and Random scan displays, CRT basics, video basics, Flat panel displays, Interpolative handing model

Module2

SCAN CONVERSION: [8L]
Points &lines,Linedrawingalgorithms;DDAalgorithm,Bresenham's linealgorithm,Circle generation algorithm, Ellipse generating algorithm;
Scanline polygon fill algorithm, boundary fill algorithm, flood fill algorithm

Module3

TWO-DIMENSIONAL GRAPHICS[8L]:
Twodimensionalgeometrictransformations,Matrixrepresentationsandhomogeneouscoordinates, composite transformations, Two dimensional viewing, viewing pipeline, viewing coordinate reference frame, window-to-viewport coordinate transformation, Two dimensional viewing functions, clipping operations, point, line, and polygon clipping algorithms.

Module4

MULTIMEDIA SYSTEM DESIGN & MULTIMEDIA FILE HANDLING[8L]:
Multimediabasics,Multimediaapplications,Multimediasystemarchitecture,Evolvingtechnologies for multimedia, Defining objects for multimedia systems, Multimedia data interfacestandards,Multimediadatabases.Compressionanddecompression,Dataandfileformatstandards, Multimedia I/O technologies, Digital voice and audio, Video image and animation, Full motion video, Storage and retrieval technologies. Multimedia Editing and authoring tools.

Module5

HYPERMEDIA[7L]:
Multimediaauthoringanduserinterface,Hypermediamessaging,Mobilemessaging,Hypermedia message component, Creating hypermedia message, Integrated multimedia message standards, Integrated document management, Distributed multimedia systems.

Object Oriented Programming
Course Code: EI703C
Contact: 3:0:0
TotalContactHours:36
Credits:3

Prerequisites:
Computer Fundamentals
Basic understanding of Computer Programming and related Programming Paradigms
Problem Solving Techniques with proper logic Implementation.
Basic Computer memory architecture with data accession.

Course Objectives:
It allows to map with real world Object (Object orientation) rather than action (Procedure) that comes to produce software as separated code modules which rise up decoupling and increases code re-usability.
It demonstrates that how can you change the implementation of an object without affecting any other code by increasing data security and protecting unwanted data access. (Encapsulation).
It allows you to have many different functions, all with the same name, all doing the same job, but depending upon different data. (Polymorphism).
It guides you to write generic code: which will work with a range of data, so you don't have to write basics tuff over, and over again.(Generics).
It lets you write a set of functions, and then expand the min different direction without changing or copying them in any way. (Inheritance)

Course Outcomes:
After completion of the course students will be able to:
CO1: Define the basic knowledge of Object Orientation with different properties as well as different features of Java. Oriented Programming.

CO2: Analyze various activities of different string handling functions with various I/Ooperations
CO3: DesigntheprocessofinteractionbetweenObjects,classes&methodsw.r.t.Object

CO4: develop Inheritance, Package, Interface, Exception handling, Multithreading and Applet(Web programs in java) concepts in Java.

Module 1: [5L] Introduction
Object Oriented Analysis & Design-Concepts of object-oriented programming language, Object,Class.**[1L];**Relationshipsamongobjectsandclasses-Generalization,Specialization,Aggregation, Association, Composition, links, Meta-class. **[1L];** Object Oriented Programming concepts - Difference between OOP and other conventional programming – advantages and disadvantages. Class, object, Method. **[1L];** Properties of OOP- message passing, inheritance,encapsulation,polymorphism,Dataabstraction.**[1L];**Difference between different OOPs Languages.**[1L].**

Module2: [9L] Java Basics:
Basic concepts of java programming - Advantages of java, Byte-code & JVM, Data types, Different types of Variables. **[1L];** Access specifiers, Operators, Control statements & loops.**[1L];** Array. **[1L];** Creation of class, object, method. **[1L];** Constructor- Definition, Usage

ofConstructor,DifferenttypesofConstructor.**[1L];**finalizemethodandgarbagecollection,Method & Constructor overloading. **[1L];** this keyword, use of objects as parameter & methods returning objects. **[1L];** Call by value & call by reference. **[1L];** Static variables & methods. Nested& inner classes. **[1L].**

Module3:[4L]

Basic String handling &I/O:

Basicstringhandlingconcepts-Conceptofmutableandimmutablestring,MethodsofStringclass-charAt(),compareTo(),equals(),equalsIgnoreCase(),
indexOf(),length(),substring().**[1L];**toCharArray(),toLowerCase(),toString(),toUpperCase(),trim(),valueOf()methods,Methods of String buffer class- append(), capacity(), charAt(), delete(), deleteCharAt(). **[1L];**ensureCapacity(),getChars(),indexOf(),insert(),length(),setCharAt(),setLength(),substring(),toString().**[1L];** Commandlinearguments,basicsofI/Ooperations–keyboardinputusingBufferedReader&Scanner classes.**[1L].**

Module4:[8L]

Inheritance and Java Packages:

Inheritance-
Definition,Advantages,Differenttypesofinheritanceandtheirimplementation.**[1L];**Superandfinalkeywords,super() method.**[1L];**Methodoverriding,Dynamicmethoddispatch. **[1L];** Abstract classes & methods. **[1L];** Interface - Definition, Use of Interface. **[1L];**MultipleinheritancebyusingInterface.**[1L];**JavaPackages-Definition,Creationofpackages.**[1L];**Importing packages, member access for packages.**[1L]**

Module5:[10L]

Exception handling, Multi-threading and Applet Programming:

Exception handling - Basics, different types of exception classes. Difference between Checked &Unchecked Exception. **[1L];** Try & catch related case studies **[1L];** Throw, throws & finally.**[1L];** Creation of user defined exception. **[1L];** Multithreading - Basics, main thread, thread lifecycle.**[1L];** Creation of multiple threads-yield(), suspend(), sleep(n), resume(), wait(),
notify(),join(),isAlive().**[1L];**Threadpriorities,threadsynchronization.**[1L];**Interthreadcommunication, deadlocks for threads**[1L];** Applet Programming - Basics, applet life cycle, difference between application & applet programming**[1L];**Parameter passing in applets. **[1L]**

TELEMETRY AND REMOTE CONTROL LAB
CODE:EI791
CONTACT:0:0:3
CREDITS:1.5

Course Outcome:
After completion of the laboratory course students will be able to:

CO1:explainbasiccomputationalpropertiesofremotesensingdataacquisition,storage,and processing.
CO2:explainatabasiclevelfundamentalphysicalprinciple of remote sensing
CO3:Applymathematicalrelationshipsdescribingfundamentalphysical,geometric,andcomputationalprinciples relevant to remote sensing.
CO4: DemonstrateproficiencyandconceptualunderstandinginusingsoftwareormanualTechniquesto carry out remote sensing image processing and analysis through a series of laboratory exercises and reports.

Experiments:

1. Study of voltage telemetry system using a process variable transducer.
2. Studyof4-20mA current telemetry system: 2 wireand3 wire systems.
3. Study of a frequency telemetry system.
4. Study of a FDM and Demultiplexing system using wire transmission for 2 to 4 channels.
5. Study of a PCM system.
6. Study of a Bio –Telemetry System.
7. Study of a(wireless) remote control system.
8. Study of Computerized control wireless telemetry system.

COMPUTER NETWORKING LAB
Paper Code: EI792A
Contact (Periods/Week):0:0:2
Credit Point:1

Prerequisites:

Require the Basic Linux commands and little bit programming languages concepts like C,Java.

Course Objective:

Familiarization with Network devices, cables and other tools.

To implement Different protocols of Transport Layer like UDP,TCP.

Implementing different Routing protocols of Network Layer.

To interpret different congestion control Algorithms

To analyse the functions of each layer and gain knowledge in different applications that use computer networks.
To emphasize the hand-on experience of network topology in a laboratory environment

Course Outcome(s):

After completion of the laboratory course students will be able to:

CO1: Installation of different Network devices, simulators, hardware connection using cables and other tools.
CO2: Demonstrate TCP&UDP using socket program.
CO3: Develop the code for Data link layer protocol simulation.
CO4: Examine the performances of Routing protocol with congestion control algorithm using network simulator

Experiments:

Familiarization of UNIX or Linux environment, UNIX or Linux general Comm and specially Network Commands .Familiarization of Internetworking - Network Cables -Colour coding-Crimping. Internetworking Operating Systems-Configurations.

Implementation of flow control mechanisms
Socket Programming using TCP and UDP
Implementing routing protocols such as RIP,OSPF.
FamiliarizationofadvancedsimulatorslikePacketTracer,NS2/NS3,OMNET++,TinyOS
Server Configuration: only webserver (instructor can do more than that)

Textbooks:

Multimedia Lab
Paper Code: EI 792B
Contact (Periods/Week): 0:0:2
Credit Point: 1

Prerequisite:
Computer Programming, Mathematics

Course Objective:
The objective of the course is to become familiar with graphics programming and expertise in text, image, audio, video enhancement and manipulation using different software/tools through projects.

Course Outcome
After completion of this course student will be able to:
CO1: Analyze the effects of scale and use on both presentation and lower level requirements
CO2: Create 3D graphical scenes using open graphics library suits
CO3: Develop an interactive multimedia presentation by using multimedia devices and identify theoretical and practical aspects in designing multimedia applications surrounding the emergence of multimedia technology.
CO4: Design image manipulation, enhancement, and basic transformations on objects and clipping algorithm on lines

Course Content:
IMPLEMENTTHEEXERCISESUSINGC/C++/OPENGL/JAVA
Implementation of Algorithms for drawing2DPrimitives–Line (DDA, Bresenham)–all slopes, Circle (Midpoint)
2D Geometrictransformations–Translation,Rotation Scaling, Reflection Shear, Window-Viewport
Composite 2D Transformations

Line Clipping
3DTransformations-Translation, Rotation, Scaling
3DProjections–Parallel, Perspective
Creating3DScenes
ImageEditingandManipulation-BasicOperationsonimageusinganyimageeditingsoftware,Creating GIF animated images, Image optimization
2DAnimation–To create Interactive animation using any authorising tool
VLC and Video Streaming
HTML5andmediapublishingwithProjects based learning
Web document creation using Dreamweaver
Creating Animation using Flash

Object Oriented Programming Lab
Course Code: EI792C
Contact: 0:0:2
Credit: 1

Prerequisites:

Computer Fundamentals
BasicunderstandingofComputerProgrammingandrelatedProgrammingParadigms
Problem Solving Techniques with proper logic Implementation.

Course Objective:

Itdemonstratesthathowcanyouchangetheimplementationofanobjectwithoutaffecting any other code by increasing data security and protecting unwanted data access.(Encapsulation).
It allows you to have many different functions, all with the same name, all doing the same job, but depending upon different data. (Polymorphism).
It guides you to write generic code: which will work with a range of data, so you don't have to write basic stuff over, and over again.(Generics).
It lets you write a set of functions, and then expand them in different direction without changing or copying them in any way. (Inheritance)

Course Outcome:

After completion of this course student will be able to

CO1: Create the procedure of communication between Objects, classes &methods.
CO2: Understand the elementary facts of Object Orientation with various characteristics as well as several aspects of Java.
CO3: Analyze distinct features of different string handling functions with various I/O operations.
CO4: Discuss Inheritance, Package, Interface, Exception handling, Multithreading and Applet(Web program in java) programming concepts in Java.

Module1: [4L] Java Basics:
Simple Java programming using operators, control statements & loops, array.

Programming on class, object, and method, access specifier.

Programming on constructor, method/constructor overloading.

Programming on this keyword, call by value & call by reference, static variables &methods, inner classes.

Module2:[4L]

Basic String handling & I/O:

Programming to show the use of String class methods - charAt(), compareTo(), equals(),equalsIgnoreCase(),indexOf(),length(),substring(),toCharArray(),toLowerCase(),toString(),toUpperCase(), trim(), valueOf() methods.

Programming to show theuseofStringBufferclassmethods- append(),capacity(),charAt(),delete(),deleteCharAt(),ensureCapacity(),getChars(),indexOf(),insert(),length(),setCharAt(), setLength(), substring(),toString()methods.

Programming on Command line arguments.

Programming using key board input by implementing Buffered Reader & Scanner classes.

Module3:[3L]

Inheritance, Interface and Java Packages:

Programming on Simple Inheritance, super and final keywords, super() method.

Programming on method overriding, dynamic method dispatch, abstract classes &methods, multiple in heritance by using interface.

Programming on importing system package, creating user-defined package, import inguser-defined package, using protected access specifier, sub classing an imported class of a package, using same names for classes of different packages, adding multiple public classes to a package.

Module4:[3L]

Exception handling, Multi-threading and Applet Programming:

Programming on exception handling using try- catch block, implementing throws and throws keywords, using finally block, creating user-defined exception.

Programming on creating childthreads i) by extending thread class ii) by implementing runnable interface, creating child threads by assigning thread priorities.

Programming on creating simple appletto display some message, creating appletto add 2integers,creating applet to do GUI based programming.

Course Name: Principles of Management
Course Code: HU 804
Contact: 2:0:0
Credits: 2
Total contact hour: 24

Prerequisites: basic management study

Course Objective:

1. To understand and apply management principles in to manufacturing organization.
2. To understand concepts of work study, method study, and Quality control method to improve performance of any organization.

Course outcome:

On completion of the course students will be able to
CO1: explain the relevance of management concepts.
CO2: apply management techniques for meeting current and future management challenges faced by the organization
CO3: compare the management theories and models critically to solve real life problems in an organisation.
CO4: apply principles of management in order to execute the role as a manager in an organisation.

Course Content:

Module-1: Management Concepts: Definition, roles, functions and importance of Management, Evolution of Management thought-contribution made by Taylor, Fayol, Gilbreth, Elton Mayo, McGregor, Maslow**(4L)**

Module - 2: Planning and Control: Planning: Nature and importance of planning, -types of planning, Levels of planning-The Planning Process.–
MBO, SWOT analysis,McKinsey's7S Approach.
Organising for decision making: Nature of organizing, span of control , Organisational structure –line and staff authority.
Basic control process -control as a feedback system – Feed Forward Control –Requirements for effective control–control **(4L)**

Module-3:Group dynamics: Types of groups, characteristics, objectives of Group Dynamics.
Leadership: Definition, styles& functions of leadership, qualities for good leadership, Theories of leadership **(4L)**
Module – 4: Work Study and work measurement: Definition of work study**,** Method Study Steps, Tools and Techniques used in the Method Study and Work Measurement
TimeStudy:Aim&Objectives,,UseofstopwatchprocedureinmakingTimeStudy.Performancerating,allowancesanditstypes.CalculationofStandardTime.Worksampling**(4L)**
Module-5: Marketing Management:FunctionsofMarketing,ProductPlanninganddevelopment,Promotional Strategy**(2L)**
Module - 6: Quality management: Quality definition, Statistical quality control, acceptance sampling ,Control Charts –Mean chart, range chart,c chart,p chart, np chart, Zero Defects, Quality circles, , Kaizen & Six Sigma ,ISO -9000 Implementation steps, Total quality management **(6L)**

Course Name: Virtual Instrumentation
Course Code: EI 801A
Contact: 3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite:

Sensors and Transducers, Process Instrumentation, Programming Languages, Communication Engineering

Course Objective:

The objective of this course is:
1. To introduce the concept of virtual instrumentation
2. To develop basic VI programs using loops, case structures etc. including its applications in image, signal processing and motion control

Course Outcome:

After the successful completion of the course the students will be able to:
CO1: Understand the various types of structures used in LabVIEW
CO2: explain the working of LabVIEW.
CO3: apply the knowledge of LabVIEW for signal processing, image processing etc.
CO4: analyse and design different type of programs based on data acquisition

Module I: [8L]

Review of Virtual Instrumentation: Historical perspective, Block diagram and Architecture of Virtual Instruments Data, Review of measurement systems- analog systems, digital systems
Flow Techniques: Graphical programming in data flow, Comparison with conventional programming.

Module II: [10L]

Virtual instrumentation in LabVIEW: Introduction (Front Panel, Block Diagram), Data Types, Operators, Instructions, Graphs, Plots

Module III: [10L]

VI Programming Techniques: VIs and sub-VIs, Loops and Charts, Arrays, Clusters and graphs, Case and sequence structures, Formula nodes, Local and global variables, Strings and file I/O. Virtual Instrument projects

Module IV: [8L]

Data Acquisition Basics: ADC, DAC, DIO, Counters and timers**.**
Data acquisition boards – Serial ports: RS-232, USB ; Parallel ports: IEEE-1284, GPIB standard IEEE-488.2 , System buses, Interface buses: PCMCIA, VXI, SCXl, PXI, etc.

Text Books:

1. Johnson, G., LabVIEW Graphical Programming, McGraw–Hill (2006).
2. Wells, L.K. and Travis, J., LabVIEW for Everyone, Prentice Hall Inc. (1996).
3. Gupta, S. and Gupta, J.P., PC Interfacing for Data Acquisition and Process Control, Instrument Society of America (1988)

Reference Books:

1. Jeffrey Travis , Jim Kring, LabVIEW for Everyone: Graphical Programming Made Easy and Fun
2. Nitesh Pradhan, Let Us LabVIEW: Part 1, Notion Press
3. 2. Nitesh Pradhan, Let Us LabVIEW: Part 2, Notion Press

Course Name: Embedded System Design
Course Code: EI801B
Contact: 3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite: Knowledge of microprocessor and microcontroller.

Course Objective:

1. An ability to design a system, component, or process to meet desired needs within realistic constraints.
2. Ability to understand microcontroller, microcomputer, embedded system.
3. Understand different components of a micro-controller and their interactions.
4. To become familiar with the programming environment used to develop embedded systems.
5. Understand key concepts of embedded systems like IO, timers, interrupts, interaction with peripheral devices
6. Learn debugging techniques for an embedded system

Course Outcome:

After completion of the course, the students will be able to

CO1: Understand the architecture and classifications of different embedded systems and the related programming knowledge.
CO2: Understand the concepts of embedded systems like I/O, timers, interrupts, interaction with peripheral devices
CO3: Choose case-specific debugging technique for an embedded system.
CO4: Design various real time systems using embedded systems.

Module I: [5L]

Introduction to the Embedded System: Embedded system Vs General computing systems, Purpose of Embedded systems, classifications of embedded systems, fundamentals of embedded processor and microcontrollers, CISC vs. RISC, ASIC.

Module II: [9L]

Serial and parallel communication: devices and protocols, wireless communication: devices and protocols, parallel communication network using ISA, PCI, PCT-X, Internet embedded system network protocols, USB, Bluetooth.

Module III: [5L]

Program Modelling Concepts ; Fundamental issues in Hardware software co-design, Unified Modeling Language(UML), Hardware Software trade-offs DFG model, state machine programming model, model for multiprocessor system.

Module IV: [5L]

Real Time Operating Systems: Operating system basics, Tasks, Process and Threads, Multiprocessing and multitasking, task communication, task synchronization, qualities of good RTOS.

Module V: [12L]

PIC microcontroller: introduction, architecture, comparison of PIC with other CISC and RISC based systems

and microprocessors, assembly language programming, addressing modes, instruction set, Interfacing with various sensors and actuators using PIC microcontroller. Programming concepts and embedded programming, embedded architecture.

Text Books:

1. Introduction to Embedded Systems : Shibu K. V. (TMH)
2. Embedded System Design – A unified hardware and software introduction: F. Vahid (John Wiley)
3. Embedded Systems : Rajkamal (TMH)
4. Embedded Systems : L. B. Das (Pearson)
5. Embedded System design : S. Heath (Elsevier)
6. Embedded microcontroller and processor design: G. Osborn (Pearson)
7. Programming PIC microcontrollers with PIC basic by chuck helebuyck
8. PIC microcontrollers-programming in basic by Milan verle

Course Name: Mechatronics
Course Code: EI801C
Contacts: 3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite: Knowledge of basic electrical, sensors & transducers, microprocessors and microcontrollers, control system etc. are required.

Course Objective:

1.Have a strong foundation in science and focus in mechanical, electronics, control, software, and computer engineering, and a solid command of the newest technologies

2. Be able to design, analyse, and test "intelligent" products and processes that incorporate appropriate computing tools, sensors, and actuators.

3. Be able to demonstrate professional interaction and communicate effectively with team members.

4. Be able to work efficiently in multidisciplinary teams.

Course Outcome:

After completion of the course, the students will be able to

CO1. Apply the knowledge of mathematics, science, and engineering.
CO2: apply the techniques, skills, and modern mechatronics engineering tools necessary for engineering practice.
CO3. Design mechatronics component, system or process to meet desired needs.
CO4. Develop the real time solution of engineering problems.

Module I: Introduction to Mechatronics: [5L]

Introduction to Mechatronics: Definition, Mechatronics in design and manufacturing, Comparison between Traditional and Mechatronic approach; Concurrent engineering.

Module II: Electromechanical Drives: [8L]

Electrical Drives: Stepper motors, servo drives. Mechanical Drives: Different mechanisms, Ball screws, Linear motion bearings, Transfer systems.

Module III: Introduction to robotics [6L]

Definition of robot, classification of robots according to coordinate system and control method, Main components of robots – manipulator, sensors, controller etc, Robot characteristics – payload, reach, repeatability, accuracy, resolution.

Module IV: Robot End effectors & Actuators [8L]

Types, mechanical grippers, other types of grippers, Tools as end effecters. Characteristics of actuating systems, Actuating System – Hydraulic devices, pneumatic devices, electric motors, other special actuators.

Module V: Sensors and Artificial Intelligence [9L]

Characteristics of micro switches, touch and slip sensors, non-contact proximity sensors, Robot Vision System, Robot programming
Languages – VAL, AML/2, ARM BASIC.

Course Name: Mobile Communication
Course Code: EI802A
Contacts: 3:0:0
Credits: 3
Total No. Of Lectures: 36

Prerequisite: Analog and Digital Communication System

Course Objective:

1. To make students familiar with basics of mobile communication systems.
2. To choose system (TDMA/FDMA/CDMA) according to the cost of installation, complexity, speed of propagation, channel properties etc.
3. To compare between mobile communication and static communication.
4. To identify the advantages, limitations and design techniques of 2G and 3G wireless mobile communications.
5. This subject can be considered as a prerequisite for the course in Wireless LANs.

Course Outcome:

By the end of the course, the student will be able to
CO1: analyze and design wireless and mobile cellular systems.
CO2: analyze the advanced research wireless and mobile cellular programs.
CO3: analyze all the applications of wireless protocols
CO4: design the mobile networks.

Module 1 [3]

Introduction: Vision of mobile communication. Historical perspective in the development of mobile communication - 1G to 4G and beyond (5G). Wireless standards.

Module 2 [9]

Cellular system principle and planning: Cellular concepts - cell structure, frequency reuse, cell splitting and channel assignments, cellular network architecture. Location updating and Call setup. Hand off techniques and power control. Selection of uplink and downlink frequencies.

Module 3 [6]

Global System of Mobile communication (GSM): System overview, GSM architecture. Mobility management. Network signalling.

Module 4 [6]

GSM system architecture and function partitioning. Introduction to Mobile System (MS). Base Station System (BSS). Home Location Register (HLR), Visiting Location Register (VLR), Equipment Identity Register (EIR).

Module 5 [6]

GSM radio aspects: Wireless medium Access Control – FDMA, TDMA, CDMA, WCDMA. GSM radio standards. Frequency band and channel allocation.

Module 6 [4]

Mobile data communication. Wireless LANS (WLANS). IEEE 802.11 Standards, Mobile IP

Module 7 [2]

Introduction to GPS systems and its applications in real life.

Text Books:

1. Mobile Cellular Telecommunications – Analog & Digital Systems, William C. Y. Lee, McGraw Hill, 1995
2. Mobile Communications Design Fundamentals, William C. Y. Lee, A Wiley-lnterscience Publication
3. Mobile Communications, J. Schiller, Pearson Education

Reference Books:

1. Wireless Communications, T. S. Rappaport, Prentice Hall International, 2002.
2. Wireless Network Evolution, V. K. Garg - Pearson Ed.

Course Name: VLSI & Microelectronics
Course Code: EI 802B
Contacts: 3:0:0
Credits: 3
Total Contact Hours: 36

Pre requisite: Concept of courses Solid State Devices; Analog Electronic Circuit; Digital Electronic and Circuit

Course Objective:

Objective of the course is:
To understand the basic concepts of designing combinational and sequential circuits and the design of VLSI ICs
To motivate students to design VLSI circuits in the area of digital ,analog
To encourage for the design of IC with low power and high speed.
To study various programmable logic devices like PLDs and FPGA.

Course Outcome:

The Students will be able to
CO1: Understand scale of integration and VLSI design flow and VLSI Design steps.
CO2: Understand the VHDL basics and to construct the combinational and sequential logic circuits.
CO3: Describe fabrication steps of IC and construct stick diagram & layout of CMOS inverter and basic gates based on Layout design rules.
CO4: analyse the different parameters related to the different MOS devices and to design the combinational and sequential logic circuits.

Module –I: Introduction to VLSI Design: [9L]

Historical perspective development of VLSI from discrete electronic circuit to VLSI. IC, MSI, LSI, Microelectronics & VLSI.
Types of VLSI Chips (General purpose, ASIC, PLA, FPGA),photo-resist Basic CMOS Technology – (Steps in fabricating CMOS), Basic n-well CMOS proc VLSI Design Concepts, Moor's Law, Scale of Integration (SSI, MSI, LSI, VLSI, ULSI – basic idea only), Types of VLSI Chips (Analog & Digital VLSI chips, General purpose, ASIC, PLA, FPGA), Design principles (Digital VLSI – Concept of Regularity, Granularity etc), Design Domains (Behavioral, Structural, Physical), Y-Chart, Digital VLSI Design Steps.

Module-II : MOS structure: [2L]

E-MOS & D-MOS, Charge inversion in E-MOS, Threshold voltage, Flat band voltage, Potential balance & Charge balance, Inversion, MOS capacitances. Three Terminal MOS Structure: Body effect. Four Terminal MOS Transistor: Drain current, I-V characteristics. Current-voltage equations (simple derivation). Scaling in MOSFET, General scaling, Constant Voltage & Field scaling.] CMOS: CMOS inverter, Simple Combinational Gates - NAND gate and NOR Gate using CMOS.

Module-III: Micro-electronic Processes for VLSI Fabrication: [10L]

Silicon Semiconductor Technology- An Overview, Wafer processing, Oxidation, Epitaxial deposition, Ion-implantation & Diffusion, Cleaning, Etching, Photo-lithography – Positive & Negative ess, p-well CMOS process, Twin tub process, Silicon on insulator Layout Design Rule: Stick diagram with examples, Layout rules.

Module –IV: Hardware Description Language:[6L]

VHDL or Verilog Combinational & Sequential Logic circuit Design.

Text Books:

1. Digital Integrated Circuit , J.M.Rabaey, Chandrakasan, Nicolic, Pearson Education
2. CMOS Digital Integrated Circuits Analysis and Design , S.M.Kang & Y.Leblebici,TMH.
3. CMOS Analog Circuit Design , Allen & Holberg , Oxford

4. Design of Analog CMOS Integrated Circuits , Behzad Razavi , TMH .

Reference Books:

1. Microelectronic Circuits , Sedra & Smith , Oxford
2. Introduction to VLSI Circuits and System , Uyemura , Wiley
3. VLSI Design , Debaprasad Das , Oxford
4. VLSI Design and EDA Tools , Angsuman Sarkar , Swapnadip De , C.K. Sarkar , Scitech
5. VLSI Design Techniques for Analog and Digital Circuits , Geiger , Allen , Strader , TMH

Course Name: Quantum Computing
Course Code: EI802 C
Contacts: 3L
Credits: 3
Total Contact Hours: 36

Course Objective:

1. To make students familiar with basics of quantum computation
2. To provide basic idea about quantum circuits
3. To compare between classical and quantum information theory
4. To learn students about quantum algorithms

Course Outcome:

After successful completion of the course, students will be able to
CO1: explain the basics of quantum computation
CO2: solve different quantum circuits
CO3: describe quantum Information and cryptography protocols
CO4: develop quantum algorithms

Module 1: **Introduction to Quantum Computation:**
Concept of quantum computation, How it differs for conventional computation, Quantum systems, Basics of Quantum theory, Schrodinger's time dependent equation, Wave nature of Particles
03

Module 2: Background Mathematics and Physics:
Complex numbers and its geometrical representations, Complex vector spaces, inner products and Hilbert spaces, Hermitian and unitary matrices, Tensor products of vector spaces, Deterministic Systems Probabilities and measurements, entanglement, density operators and correlation, basics of quantum mechanics, Measurements in bases other than computational basis.
08

Module 3:Quantum Circuits:
single qubit gates, multiple qubit gates, design of quantum, circuits. Probabilistic descriptions and, state vector, operators, postulates of quantum mechanics, Dirac formalism, Stern-Gerlach experiment, electron spin, superposition of states, entanglement, Bits and Qubits, Classical gates versus quantum gates
08

Module 4:Quantum Information and Cryptography:
Comparison between classical and quantum information theory. Introduction to quantum cryptography and quantum information theory, Bell states. Quantum teleportation. Quantum Cryptography,nocloning theorem.
08

Module 5: Quantum Algorithms:
Classical computation on quantum computers. Relationship between quantum and classical complexity classes. Deutsch's algorithm, Deutsch's-Jozsa algorithm, Shor factorization, Grover search. Concept of Quantum programming languages, Probabilistic and Quantum computations
9

Course Name: Virtual Instrumentation Lab
Course Code: EI 891A
Contact: 0:0:3
Credits: 1.5

Course Objective:

The course Objectives are:
1. To develop basic VI programming skills
2. To develop the skills for application of VI programs in signal processing and control systems.

Course Outcome:

On completion of this course students will be able to:
CO1:explain the LabVIEW software.
CO2: explore the various programming techniques of LabVIEW software
CO3:design different type of program based on data acquisition systems and control systems
CO4: design the different real time applications using the concept of VI

List of Experiments:

1. To familiarize with array, Charts and graphs in LabVIEW
2. To study the various loops available in LabVIEW
3. To study the Case and sequence structures in LabVIEW
4. To familiarize with the applications of Formula Node in LabVIEW in solving complex mathematical formulas
4. To measure and plot temperature using LabVIEW with DAQ cards
5. To measure strain and load using LabVIEW with DAQ cards
6. To design a temperature control Loop using LabVIEW with DAQ cards
7. To deploy a LabVIEW interface with a embedded board (Arduino or Raspberry Pi) and study it's response.
8. To design a program of Signal Generation using DAQ Cards in Labview platform.
9. To design a simple PID controller using LabVIEW
10. Innovative Experiment.

Course Name: Embedded Systems Design Lab
Course Code: EI 891B
Contact: 0:0:3
Credit: 1.5

Prerequisites: Concept of Digital Electronics Lab, Microprocessor and Microcontroller Lab.

Course Outcomes:

Familiarization with PIC Microcontroller, ARM Microcontroller, FPGA and their interfacing.
Design of different types real time projects with digital controllers.
Program ARM microcontroller to perform various tasks.
Understand the key concepts of embedded systems such as I/O, timers, interrupts and interaction with peripheral devices.

List of Experiment:

1. **PIC based experiment (Any Five)**

Familiarization of PIC kit.
Interface and control a LED, LCD, Keyboard, ADC& DAC using PIC.
Connect two PIC kit and transfer data serially.
Design a Digital watch based on PIC.
Control a stepper motor and display temperature from a temperature sensor on a LCD.

2. **ARM based experiment (Any Four)**

Familiarization with ARM evaluation system
Familiarization with Raspberry Pi
Interfacing with a real time clock using a serial port to display time.
Interface a Keyboard and display the keystrokes on a LCD, LED.
Familiarization of image processing using ARM

3. **FPGA based experiment**

Design a 3 to 8 decoder circuit.
Design an UP/DOWN counter and display the count on a 7-segment display.
Designing an ALU and verify with mathematical operations.
Innovative Project.

Course Name: Mechatronics Lab
Course Code: EI 891C
Contact: 3P
Credits: 0:0:2

Prerequisite: Knowledge of basic electrical, sensors & transducers, microprocessors and microcontrollers, control system etc. are required.

Course Objective:

Providing an environment to the students to apply and absorb Mechatronics concepts.
To provide a common ground to perform experimental study regarding fundamental sequence control by using sensors and actuators.
The laboratory is designed to assist the students in the development of "hands-on" skills with an emphasis on hardware architecture and multidisciplinary systems.
To introduce the principles of signal conditioning and displaying.

Course Outcome:

On the completion of this courser the students will be able to:

CO1. understand the basic knowledge of mathematics, science, and engineering.
CO2: apply the techniques, skills, and modern mechatronics engineering tools necessary for engineering practice
CO3: Design mechatronics component, system or process to meet desired needs.
CO4: develop some models to solve the real time engineering problems.

Experiments:

1. Stepper motor interface.
2. Traffic light interface.
3. Speed control of DC motor.
4. Study of various types of transducers.
5. Study of hydraulic, pneumatic and electro-pneumatic circuits.
6. Modelling and analysis of basic hydraulic, pneumatic and electrical circuits using Software.
7. Study of PLC and its applications.
8. To study various sensors and transducers and compare with ideal characteristics.
9. To measure the characteristics of LVDT using linear displacement trainer kit.
10. To study the various components of electro pneumatic trainer kit and perform

Paper Name: Essence of Indian Knowledge Tradition
Paper Code: MC801
Total Contact Hours: 3h /Week
Non-Credit Mandatory Course

Course Objectives:

The course aims at imparting basic principles of thought process, reasoning and inferencing. Sustainability is at the core of Indian Traditional Knowledge Systems connecting society and nature. Holistic life style of yogic science and wisdom capsules in Sanskrit literature are also important in modern society with rapid technological advancements and societal disruptions. Part-I focuses on introduction to Indian Knowledge Systems, Indian perspective of modern scientific world-view, and basic principles of Yoga and holistic health care system.

Course Outcomes:

At the end of the Course, Student will be able to:
CO 1: Identify the concept of Traditional knowledge and its importance.
CO 2: Understand the importance of Yoga for health care
CO 3: Explain the connection between Modern Science and Indian Knowledge System
CO 4: Interpret the effect of traditional knowledge on environment.

UNIT-I: Basic structure of Indian Knowledge System
Define traditional knowledge, nature and characteristics, scope and importance, kinds of traditional knowledge, Indigenous Knowledge (IK), characteristics, traditional knowledge vis-a-vis indigenous knowledge, traditional knowledge Vs western knowledge traditional knowledge

UNIT-2: Modern Science and Indian Knowledge System
Systems of traditional knowledge protection, Legal concepts for the protection of traditional knowledge, Patents and traditional knowledge, Strategies to increase protection of traditional knowledge

UNIT-3:Yoga and Holistic Health care
Yoga for positive health, prevention of stress related health problems and rehabilitation, Integral approach of Yoga Therapy to common ailments.

UNIT-4: Traditional Knowledge and Environment
Traditional knowledge and engineering, Traditional medicine system, Importance of conservation and sustainable development of environment, Management of biodiversity
