

**GURU NANAK INSTITUTE OF TECHNOLOGY**  
**An Autonomous Institute under MAKAUT**  
**2022**  
**FORMAL LANGUAGE AND AUTOMATA THEORY**  
**CS403**

TIME ALLOTTED: 3 HOURS

FULL MARKS: 70

*The figures in the margin indicate full marks.**Candidates are required to give their answers in their own words as far as practicable***GROUP – A****(Multiple Choice Type Questions)**Answer any **ten** from the following, choosing the correct alternative of each question: **10×1=10**

- |   | Marks | CO No |
|---|-------|-------|
| 1. (i) Choose the correct option.   | 1     | CO1   |
| a) FSM can accept strings of Regular Language but not Context Free Language   |       |       |
| b) FSM can accept strings of Context Free Language but not Regular Language   |       |       |
| c) FSM can accept strings of Both Regular Language and Context Free Language  |       |       |
| d) Both PDA and FSM can accept strings of Context Sensitive Language  |       |       |
| (ii) The Regular Expression representing the set of all strings over $\Sigma=\{0,1\}$ starting with 0 and ending with 01 is | 1     | CO2   |
| a) $0^*(0+1)^*01$   |       |       |
| b) $0(0+1)^*01$   |       |       |
| c) $001(0+1)^*$   |       |       |
| d) $(0+1)^*001$   |       |       |
| (iii) Which of the following is <b>NOT</b> equivalent to $(P^*Q^*)^*$ ?   | 1     | CO3   |
| a) $(P+Q)^*$  |       |       |
| b) $(P^*+Q^*)^*$  |       |       |
| c) $(P+Q^*)^*$  |       |       |
| d) $(P^*Q)^*$   |       |       |
| (iv) The set of all strings over the alphabet $S = \{a, b\}$ (including $\epsilon$ ) is denoted by                          | 1     | CO3   |
| a) $(a + b)^*$  |       |       |
| b) $(a + b)^+$  |       |       |
| c) $a+b^+$  |       |       |
| d) $a^*b^*$   |       |       |
| (v) A Push down automaton is different from a finite automaton because of   | 1     | CO3   |
| a) a read head  |       |       |
| b) a memory in the form of stack  |       |       |
| c) a set of states  |       |       |
| d) all of these   |       |       |

- |   |   |     |
|---|---|-----|
| (vi) Consider $L = \{ a^n b^n \mid n \geq 1 \}$ , $L$ is<br>a) CFL but not Regular<br>b) CSL but not CFL<br>c) Regular<br>d) Any Type   | 1 | CO2 |
| (vii) Type 0 is accepted by<br>a) Linear bounded Automata<br>b) Push down automata<br>c) Finite state automata<br>d) Turing machine   | 1 | CO3 |
| (viii) Which is NOT a part of the mechanical diagram of "Turing Machine"?<br>a) Input tape<br>b) read-write head<br>c) Finite Control<br>d) Stack   | 1 | CO3 |
| (ix) Maximum no of states of a DFA converted from a NFA with $n$ states is<br>a) $n$<br>b) $n^2$<br>c) $2^n$<br>d) None of these  | 1 | CO3 |
| (x) The class of regular language is NOT closed under<br>a) Concatenation<br>b) Union<br>c) Kleene closure<br>d) Subset   | 1 | CO4 |
| (xi) The string 1101 does not belong to the set represented by<br>a) $110^*(0+1)$<br>b) $1(0+1)^*101$<br>c) $(10)^*(01)^*(00+11)^*$<br>d) $(00+(11)^*01)^*$   | 1 | CO3 |
| (xii) The following transitions represent<br>$\delta(q_0, a, Z_0) = (q_0, aZ_0)$<br>$\delta(q_0, a, a) = (q_0, aa)$<br>$\delta(q_0, b, a) = (q_1, \epsilon)$<br>$\delta(q_1, b, a) = (q_1, \epsilon)$<br>$\delta(q_1, \epsilon, Z_0) = (q_1, \epsilon)$<br>a) acceptance of $L = \{a^n b^n, n \geq 1\}$ without empty stack<br>b) acceptance of $L = \{a^n b^n, n \geq 0\}$ with empty stack<br>c) acceptance of $L = \{a^n b^n, n \geq 1\}$ with empty stack<br>d) acceptance of $L = \{a^n b^n, n \geq 0\}$ without empty stack | 1 | CO4 |

**GROUP – B**

**(Short Answer Type Questions)**

Answer any *three* from the following:  $3 \times 5 = 15$

- |    |   | Marks | CO No |
|----|---|-------|-------|
| 2. | (a) Construct a CFG for palindrome of binary numbers.   | 3     | CO4   |
|    | (b) Construct a context-free grammar for the language $L = \{a^n b^{2n} \mid n \geq 1\}$ over $\Sigma = \{a, b\}$ . | 2     | CO4   |

3. (a) Differentiate between Mealy machine and Moore machine. 2 CO3  
 (b) Design a Finite Automata (FA) that accepts set of all strings over  $\Sigma = \{0, 1\}$  such that every string ends with 100 but starts with 1. 3 CO3
4. (a) Construct a Finite Automata equivalent to the Regular Expression  $L = ab(a+b)(ab)^*b$  3 CO3  
 (b) Design a DFA that accepts set of all strings over  $\Sigma = \{0, 1\}$  such that number of 1s and the number of 0s in an acceptable string are divisible by 2. 2 CO3
5. (a) Using Pumping Lemma prove that  $L = \{a^n b^n \mid n \geq 1\}$  is not regular. 5 CO3
6. (a) What do you mean by unit production? 1 CO5  
 (b) Remove unit productions from the following grammar. 4 CO5  
 $S \rightarrow AB, A \rightarrow a, B \rightarrow C, C \rightarrow D, D \rightarrow b.$

## GROUP – C

## (Long Answer Type Questions)

Answer any *three* from the following:  $3 \times 15 = 45$ 

- |    |  | Marks | CO No. |
|----|--|-------|--------|
| 7. | (a) Illustrate PDA with a schematic diagram.   | 2     | CO1    |
|    | (b) Design a PDA for the language $L = \{WW^R \mid W \in (a, b)^*\}$ and trace its moves for an input string <i>aabbbaa</i> .  | 9     | CO1    |
|    | (c) Discuss on the Chomsky classification of grammar.  | 4     | CO1    |
| 8. | (a) Describe a Turing Machine with schematic diagram?  | 2     | CO1    |
|    | (b) Design a Turing Machine for the language $L = \{a^n b^n \mid n \geq 0\}$ and draw the state transition diagram for the same and trace its moves while scanning <i>aabb</i> . | 10    | CO2    |
|    | (c) Illustrate the Halting Problem of Turing Machine?  | 3     | CO2    |
| 9. | (a) Examine whether the following FSMs are equivalent.   | 3     | CO1    |

(a)

(b)

- (b) Considering the following machine, draw the corresponding Merger Graph and the Compatibility Graph. Also develop the minimal machine which covers the given machine.

| PS              | NS, z          |                |                |                |
|-----------------|----------------|----------------|----------------|----------------|
|                 | I <sub>1</sub> | I <sub>2</sub> | I <sub>3</sub> | I <sub>4</sub> |
| $\rightarrow A$ | -              | -              | E, 1           | -              |
| B               | C, 0           | A, 1           | B, 0           | -              |
| C               | C, 0           | D, 1           | -              | A, 0           |
| D               | -              | E, 1           | B, -           | -              |
| E               | B, 0           | -              | C, -           | B, 0           |

10. (a) Transform the grammar with following productions into Chomsky Normal Form. 7 CO3  
 $S \rightarrow ASB$   
 $A \rightarrow aAS \mid a \mid \epsilon$   
 $B \rightarrow SbS \mid bb$
- (b) Consider the following grammar for an arithmetic expression and prove that it is an ambiguous grammar over  $\Sigma = \{+, *, 1, 2\}$  and  $NT = \{E, F\}$ . Can you suggest a strategy to make it an equivalent unambiguous grammar? 5 CO3  
 $E \rightarrow E + E \mid E * E \mid F$   
 $F \rightarrow 1 \mid 2$
- (c) Construct a derivation tree for the string aabbabba for the CFG given by, 3 CO3  
 $S \rightarrow aB \mid bA$   
 $A \rightarrow a \mid aS \mid bAA$   
 $B \rightarrow b \mid bS \mid aBB$
11. (a) Write a regular expression for integer numbers over  $\Sigma = \{0, 1, 2, 3, 4, 5, 6, 7, 8, 9\}$  such that the acceptable number is divisible by both 5 and 2. 1 CO5
- (b) Construct a DFA equivalent to the following NDFA. 7 CO4

- (c) Generate the regular expression for the following FSM. 7 CO5
