Subject: Mathematics 1

Subject Code: M 101

Contact: 3L:1T:0P

Credits: 4

Prerequisites: Any introductory course on matrix algebra, calculus, geometry.

Course Outcomes (COs):

On successful completion of the learning sessions of the course, the learner will be able to:

M 101.1: Recall the distinctive characteristics of matrix algebra, differential calculus, integral calculus and vector analysis.

M 101.2: Understand the theoretical working of matrix algebra, differential calculus, integral calculus and vector analysis.

M 101.3: Apply the principles matrix algebra, differential calculus, integral calculus and vector analysis for the solutions of the problems.

M 101.4: Analyze the application of matrix algebra, differential calculus, integral calculus and vector analysis.

M 101.5: Evaluate the result for application to the problems on matrix algebra, differential calculus, integral calculus and vector analysis

Course Content

MODULE – I: Matrix Algebra **[10L]**

Elementary row and column operations on a matrix, Rank of matrix, Normal form, Inverse of a matrix using elementary operations, Consistency and solutions of systems of linear equations using elementary operations, Linear dependence and independence of vectors, Concept & Properties of different matrices (unitary, orthogonal, symmetric, skew-symmetric, hermitian, skew-hermitian), Eigen values and Eigen vectors of a square matrix (of order 2 or 3), Characteristic polynomials, Caley-Hamilton theorem and its applications, Reduction to diagonal form (upto 3rd order).

MODULE – II: Calculus – I (Functions of single variable) **[10L]**

Rolle's theorem, Mean value theorem- Lagrange & Cauchy, Taylor's and Maclaurin's theorems, Expansion of simple functions by Taylor's and Maclaurin's Theorems, Fundamental theorem of integral calculus, Evaluation of plane areas, volume and surface area of a solid of revolution and lengths, Convergence of Improper integrals, Beta and Gamma Integrals – Elementary properties and the Inter relations.

MODULE – III: Calculus – II (Functions of several variables)**[12L]**

Introduction to functions of several variables with examples, Knowledge of limit and continuity, Partial derivatives, Total Differentiation, Derivatives of composite and implicit functions, Euler's theorem on homogeneous functions, Chain rule, Maxima and minima of functions of two variables – Lagrange's method of Multipliers, Change of variables – Jacobians (up to three variables), Double and triple integrals.

MODULE – IV: Vector Calculus**[8L]**

Scalar and vector triple products, Scalar and Vector fields, Vector Differentiation, Level surfaces, Directional derivative, Gradient of scalar field, Divergence and Curl of a vector field and their physical significance, Line, surface and volume integrals, Green's theorem in plane, Gauss Divergence theorem, Stokes' theorem, Applications related to Engineering problems.

Subject: Chemistry 1

Subject Code: CH 101

Total Contact Hours: 35

Credits: 3

Pre requisites: Knowledge of Chemistry upto 12th standard.

Course Outcomes(COs):

CH 101.1: Able to remember fundamental concepts of Chemistry and define relevant terminologies.

CH 101.2: Able to understand the principles of thermodynamics, spectroscopy and related physical properties of molecules.

CH 101.3: Able to apply the basic concept of Organic Chemistry and knowledge of chemical reactions to industries and technical fields.

CH 101.4: Able to analyze and explain protective measures of corrosion of metals in the industries.

CH 101.5: Able to assess theoretical and practical aspects relating to the transfer of the production of chemical products from laboratories to the industrial scale, in accordance with environmental considerations.

Course Content

Module 1

[8L]

Chemical Thermodynamics –I

1.1 Concept of Thermodynamic system: Definition with example of diathermal wall, adiabatic wall, isolated system, closed system, open system, extensive property, intensive property.

Introduction to first law of thermodynamics: Different statements, mathematical form.

Internal energy: Definition, Example, Characteristics, Physical significance, Mathematical expression for change in internal Energy, Expression for change in internal energy for ideal gas. 2L

1.2 Enthalpy: Definition, Characteristics, Physical significance, Mathematical expression for change in Enthalpy, Expression for change in enthalpy for ideal gas.

Heat Capacity: Definition, Classification of Heat Capacity (Cp and CV): Definition and General expression of Cp - CV. Expression of Cp - CV for ideal gas.

Reversible and Irreversible processes: Definition, Work done in Isothermal Reversible and Isothermal Irreversible process for Ideal gas, Adiabatic changes: Work done in adiabatic process, Interrelation between thermodynamic parameters (P, V and T), slope of P-V curve in adiabatic and isothermal process.

Application of first law of thermodynamics to chemical processes: exothermic, endothermic processes, law of Lavoisier and Laplace, Hess's law of constant heat summation. 3L

1.3 2nd law of thermodynamics: Statement, Mathematical form of 2nd law of thermodynamics (Carnot cycle). Joule Thomson and throttling processes; Joule Thomson coefficient for Ideal gas, Concept of inversion temperature (brief).

Evaluation of entropy: characteristics and expression, physical significance. Work function and free energy: Definition, characteristics, physical significance, mathematical expression of ΔA and ΔG for ideal gas, standard free energy and chemical potential, Condition of spontaneity and equilibrium reaction. 3L

Module 2

[7L]

2.1 Reaction Dynamics: Reaction laws: rate and order; molecularity; zero and first order kinetics, second order kinetics (same reactant concentration), Pseudounimolecular reaction, Arrhenius equation. 3L

Mechanism and theories of reaction rates (Content beyond the syllabus)

2.2 Solid state Chemistry: Introduction to stoichiometric defects (Schottky & Frenkel) and non – stoichiometric defects (Metal excess and metal deficiency).

Role of silicon and germanium in the field of semiconductor, n-type, p-type semiconductor, photo voltaic cell, fabrication of integrated circuits. 4L

Module 3

[8L]

Electrochemistry

3.1 Conductance: Conductance of electrolytic solutions, specific conductance, equivalent conductance, molar conductance and ion conductance, effect of temperature and concentration (Strong and Weak electrolyte). 1L

3.2 Electrochemical cell: Cell EMF and its Thermodynamic derivation of the EMF of a Galvanic cell (Nernst equation), single electrode potentials, hydrogen half-cell, calomel half cell (representation, cell reaction, expression of potential, Discussion, Application). 3L

3.3 Concept of battery: Battery and Commercial electrochemical cell: Dry cell, acid storage cell, alkaline storage cell, fuel cell (construction, representation, cell reaction, expression of potential, discussion, application). 2L

3.4 Corrosion and its control: Introduction, cause and effect of corrosion, types of corrosion: dry, wet and other: Electrochemical corrosion, galvanic corrosion, passivation and protective measure. 2L

Module 4

[12L]

4.1 Structure and reactivity of Organic molecule: Electronegativity, electron affinity, hybridisation, Inductive effect, resonance, hyperconjugation, electromeric effect, carbocation, carbanion and free radicals. Brief study of some addition, eliminations and substitution reactions. 3L

4.2 Polymers: Concepts, classifications and industrial applications. Polymer molecular weight (number avg. weight avg.: Theory and mathematical expression only), Poly dispersity index (PDI).

Polymerization processes: addition and condensation polymerization (mechanism not required), degree of polymerization, Copolymerization, stereo-regularity of polymer, crystallinity (concept of T_m) and amorphicity (Concept of T_g) of polymer.

Preparation, structure and use of some common polymers: plastic (HDPE, LDPE, PVC, PP, PMMA, Polyester, PTFE, Bakelite), rubber (natural rubber, SBR), fibre (nylon 6, nylon 6,6), Vulcanization of rubber, Conducting polymers and bio-polymers. 7L

4.3 Nano material: Basic principles of nano science and technology, classification, preparation, properties and application of nano material. 2L

Module 5

[5L]

5.1 Industrial Chemistry Fuels: Solid Fuel: Coal, Classification of coal, constituents of coal, carbonization of coal (HTC and LTC), proximate analysis of coal, Calorific value.

Liquid fuel: Petroleum, classification of petroleum, Refining, Octane number, Cetane number, Aviation Fuel (Aviation Gasoline, Jet Gasoline), Biodiesel.

Gaseous fuels: Natural gas, water gas, Coal gas, bio gas, CNG, LPG 3L

5.2 Water: Introduction, source of water, water quality parameter, specification for drinking water (BIS and WHO standards), Chlorination of Water, Types of hardness- Units, Brief Softening methods. 2L

Short overview of water treatment plants (Content beyond the syllabus)

Course Name: Basic Electrical Engineering

Course Code: EE 101

Contact: 3L: 0T:0P

Total Contact Hours: 36

Credits: 3

Pre-requisite: Basic 12th standard Physics and Mathematics, Concept of components of electric circuit.

Course Outcome (COs):

After completion of the course students able to

CO1: Understand Basic Electrical circuits, Power distribution and Safety measures.

CO2: Analyze and apply DC network theorems.

CO3: Analyze and apply concept of AC circuits of single-phase and three-phase.

CO4: Understand basic principles of Transformers and Rotating Machines.

Course Content

Module – 1: DC Circuits (7L)

Definition of electric circuit, linear circuit, non-linear circuit, bilateral circuit, unilateral circuit, Dependent source, node, branch, active and passive elements, Kirchhoff's laws, Source equivalence and conversion, Network Theorems-Superposition Theorem, Thevenin's Theorem, Norton Theorem, Maximum Power Transfer Theorem, Star-Delta Conversions.

Module – 2: Magnetic Circuits (3L)

Concept of Magnetic circuit, B-H curve, Analogous quantities in magnetic and electric circuits, Faraday's law, iron losses, self and mutual inductance, Energy stored in magnetic field.

Module – 3: AC Single-Phase Circuits (8L)

Sinusoidal quantities, Average and RMS values, peak factor, Form factor, Phase and Phase difference, concept of phasor diagram, V-I Relationship in R,L,C circuit, Combination R,L,C in AC series, parallel and series parallel circuits with phasor diagrams, impedance and admittance, Power factor, Power in AC circuit, Resonance in RLC series and parallel circuit, Q factor, band width of resonant circuit.

Module – 4: Three-Phase Circuits (3L)

Voltages of three balanced phase system, delta and star connection, relationship between line and phase quantities, phasor diagrams. Power measurement by two watt meters method.

Module – 5: DC Machines (6L)

Construction, Basic concepts of winding (Lap and wave). DC generator: Principle of operation, EMF equation, characteristics (open circuit, load) DC motors: Principle of operation, Torque Equation, Speed

Torque Characteristics (shunt and series machine), starting (by 3 point starter), speed control (armature voltage and field control).

Module – 6: Single-Phase Transformer

(5L)

Constructional parts, Types of transformers, emf equation, No Load no load and on load operation, phasor diagram and equivalent circuit, losses of a transformer, open and short circuit tests, regulation and efficiency calculation.

Module – 7: Three-Phase Induction Motor

(6L)

Types, Construction, production of rotating field, principle of operation, Slip and Frequency, rotor emf and current, Equivalent circuit and phasor diagram, Torque Slip characteristics torque-speed characteristics Starting of induction motor by star delta starter and (DOL starter). Speed Control of Three phase induction motor by variation of supply frequency, supply voltage and number of poles.

Module – 8: General Structure of Electrical Power System

(3L)

Power generation to distribution through overhead lines and underground cables with single line diagram, Earthing of Electrical Equipment, Electrical Wiring Practice.

Course Name: Communicative English

Course Code: HU101

Contact: 2L: 0T:0P

Credits: 2

Course Outcomes (COs):

By doing this course the students will be enabled to do the following:

HU 101.1: Able to define, identify and describe the basics of communication theory and its application.

HU 101.2: Able to recognize, recall and make use of English vocabulary and its varied usage.

HU101.3: Able to develop and apply reading and writing skills in an academic and global business context.

HU 101.4: Able to identify, explain and use the grammatical structures and forms in English.

HU 101.5: Able to analyse, classify and elaborate on the forms and formats of business writing.

Course Content

The proposed revised syllabus is as follows:

Module 1: Communication: Interface in a Globalized World [5L]

- a. Definition of Communication and Scope of Communication
- b. Process of Communication—Models and Types
- c. Verbal—Non-Verbal Communication, Channels of Communication
- d. Barriers to Communication & surmounting them

[to be delivered through case studies involving intercultural communication]

Module 2: Vocabulary and Reading [5L]

- a. Word origin—Roots, Prefixes and Suffixes, Word Families, Homonyms and Homophones
- b. Antonyms and Synonyms, One-word substitution
- c. Reading—Purposes and Skills
- d. Reading Sub-Skills—Skimming, Scanning, Intensive Reading
- e. Comprehension Practice (Fiction and Non fictional Prose/Poetry)

Texts:

- (i) Isaac Asimov, I Robot (—Robbie OR —Little Lost Robot)
- (ii) George Orwell, —Shooting an Elephant
- (iii) Ruskin Bond, —The Cherry Tree OR —The Night Train at Deoli

- (iv) Robert Frost, —Stopping by the Woods on a Snowy Evening.
- f. Precis Writing
- (Use of daily newspapers for reading practice is recommended)

Module 3: Functional Grammar and Usage**[6L]**

- a. Articles, Prepositions, Verbs
- b. Verb-Subject Agreement
- c. Comparison of Adjectives
- d. Tenses and their Use
- e. Transformation of Sentences (Singular-Plural, Active-Passive, Direct-Indirect, Degrees of Comparison)
- f. Error Correction

Module 4: Business writing**[10L]**

- a. Business Communication in the Present-day scenario
- b. Business Letters (Letters of Inquiry, Sales Letters, Complaint and Adjustment Letters, Job Application Letters)
- c. Drafting of a CV and Résumé
- d. Memo, Notice, Advertisement, Agenda, Minutes of Meetings
- e. E-mails (format, types, jargons, conventions)

Paper Name: Engineering Mechanics

Paper Code: ME 101

Contact: 3L:1T:0P

Credit: 4

Pre-requisites: Higher Secondary with Physics, Chemistry and Mathematics.

Course Outcomes (COs):

On successful completion of the learning sessions of the course, the learner will be able to:

ME 101.1: Construct free body diagram and calculate the reactions necessary to ensure static equilibrium.

ME 101.2: Study the effect of friction in static and dynamic conditions.

ME 101.3: Understand the different surface properties, property of masses and material properties.

ME 101.4: Analyze and solve different problems of kinematics and kinetics.

Course Content

Module1:

Importance of Mechanics in engineering; Introduction to Statics; Concept of Particle and Rigid Body; Types of forces: collinear, concurrent, parallel, concentrated, distributed; Vector and scalar quantities; Force is a vector; Transmissibility of a force (sliding vector).

2L

Introduction to Vector Algebra; Parallelogram law; Addition and subtraction of vectors; Lami's theorem; Free vector; Bound vector; Representation of forces in terms of i,j,k; Cross product and Dot product and their applications.

3L+1T

Two dimensional force system; Resolution of forces; Moment; Varignon's theorem; Couple; Resolution of a coplanar force by its equivalent force-couple system; Resultant of forces.

4L+1T

Module2:

Concept and Equilibrium of forces in two dimensions; Free body concept and diagram; Equations of equilibrium.

3L+1T

Concept of Friction; Laws of Coulomb friction; Angle of Repose; Coefficient of friction.

3L+1T

Module3:

Distributed Force: Centroid and Centre of Gravity; Centroids of a triangle, circular sector, quadrilateral, composite areas consisting of above figures. 4L+1T

Moments of inertia: MI of plane figure with respect to an axis in its plane, MI of plane figure with respect to an axis perpendicular to the plane of the figure; Parallel axis theorem; Mass moment of inertia of symmetrical bodies, e.g. cylinder, sphere, cone. 3L+1T

Principle of virtual work with simple application. 1L+1T

Module 4:

Concept of simple stresses and strains: Normal stress, Shear stress, Bearing stress, Normal strain, Shearing strain; Hooke's law; Poisson's ratio; Stress-strain diagram of ductile and brittle materials; Elastic limit; Ultimate stress; Yielding; Modulus of elasticity; Factor of safety. 2L+1T

Module 5:

Introduction to Dynamics: Kinematics and Kinetics; Newton's laws of motion; Law of gravitation and acceleration due to gravity; Rectilinear motion of particles; determination of position, velocity and acceleration under uniform and non-uniformly accelerated rectilinear motion; construction of x-t, v-t and a-t graphs. 3L+1T

Plane curvilinear motion of particles: Rectangular components (Projectile motion); Normal and tangential components (circular motion). 2L+1T

Module 6:

Kinetics of particles: Newton's second law; Equation of motion; D'Alembert's principle and free body diagram; Principle of work and energy ; Principle of conservation of energy; Power and efficiency. 3L+2T

Paper Name: Language Laboratory and Seminar

Paper Code: HU191

Contact: 0L:0T: 2P

Credit: 1

Prerequisites: Basic knowledge of LSRW skills.

Course Outcomes (COs):

HU 191.1: Listen to and summarize, interpret and explain audio material/data in English.

HU 191.2: Understand and implement the basics of note taking of factual data/information in English and keep a laboratory record.

HU 191.3: Engage in spoken interaction using needs specific vocabulary, language function and pronunciation in conversations, role plays and group discussions.

HU 191.4: Maintain and keep a listening log and write a film review.

Course Content

Module 1: Introduction to the Language Lab

- a. The Need for a Language Laboratory
- b. Tasks in the Lab
- c. Writing a Laboratory Note Book

Module 2: Active Listening

- a. What is Active Listening?
- b. Listening Sub-Skills—Predicting, Clarifying, Inferencing, Evaluating, Note taking
- c. Contextualized Examples based on Lab Recordings

Module 3: Speaking

- a. Speaking (Choice of words, Speech Syntax, Pronunciation, Intonation)
- b. Language Functions/Speech Acts
- c. Speaking using Picture Prompts and Audio Visual inputs
- d. Conversational Role Plays (including Telephonic Conversation)
- e. Group Discussion: Principles and Practice

Module 4: Lab Project Work

- a. Keeping a Listening Log
- b. Writing a Film Review/Advertisements

Paper Name: Chemistry – I Laboratory

Paper Code: CH 191

Contact: 0L:0T:3P

Credit: 2

Prerequisites: 10+2 science with chemistry

Course Outcome:

CH 191.1: Able to operate different types of instruments for estimation of small quantities chemicals used in industries and scientific and technical fields.

CH 191.2: Able to work as an individual also as a team member.

CH191.3: Able to analyse different parameters of water considering environmental issues

CH191.4: Able to synthesize nano and polymer materials.

CH191.5: Capable to design innovative experiments applying the fundamentals of chemistry.

Course Content

List of Experiments:

1. To Determine the alkalinity in given water sample.
2. Redox titration (estimation of iron using permanganometry)
3. To determine calcium and magnesium hardness of a given water sample separately.
4. Preparation of phenol-formaldehyde resin (Bakelite).
5. Heterogeneous equilibrium (determination of partition coefficient of acetic acid between n-butanol and water).
6. Conductometric titration for determination of the strength of a given HCl solution by titration against a standard NaOH solution.
7. pH- metric titration for determination of strength of a given HCl solution against a standard NaOH solution.
8. Determination of dissolved oxygen present in a given water sample.
9. To determine chloride ion in a given water sample by Argentometric method (using chromate indicator solution).

Innovative experiment: Preparation of silver nano-particles.

Note: From the list of 10 (Ten) experiments a minimum of 7 (seven) experiments shall have to be performed by one student of which Sl. No. 4 (Preparation of Bakelite) has to be mandatory.

Course Name: Basic Electrical Engineering**Laboratory Course Code: EE191****Contact: 0L: 0T:3P****Credits: 1.5**

Prerequisite: Basic Physics and applied physics, Basic Mathematics, Basic concept of Electric Circuit.

Course Outcome:

CO1: Identify and use common electrical components.

CO2: To develop electrical networks by physical connection of various components and analyze the circuit behavior.

CO3: Apply and analyze the operational characteristics of electrical machines.

CO4: Apply and analyze the equivalent parameters, Losses, efficiency of transformers.

Course Content**List of Experiments:**

1. Characteristics of Fluorescent, Tungsten and Carbon filament lamps.
2. Verification of Thevenin's and Norton's Theorem.
3. Verification of Superposition Theorem.
4. Calibration of Ammeter and Wattmeter.
5. Study of R-L-C series circuit.

6. Open circuit and short circuit test of a single phase Transformer.
7. Starting, Reversing of a and speed control of D.C shunt motor.
8. Test on single phase Energy Meter.
9. Familiarization of PMMC and MI type Meter.
10. Familiarization with house wiring practice.

Paper Name: Engineering Drawing and Graphics

Paper Code: ME 191

Contact: 0L:0T:3P

Credit: 2

Prerequisites: Higher Secondary with Physics, Chemistry & Mathematics

Course Outcomes: Upon successful completion of this course, the student will be able to

ME 191.1: Learn basics of drafting and use of drafting tools which develops the fundamental skills of industrial drawings.

ME 191.2: Know about engineering scales, dimensioning and various geometric curves necessary to understand design of machine elements.

ME 191.3: Understand projection of line, surface and solids to create the knowledge base of orthographic and isometric view of structures and machine parts.

ME 191.4: Become familiar with computer aided drafting useful to share the design model to different section of industries as well as for research & development.

Course Content

List of Experiments:

1. Lines, Lettering, Dimensioning, Scales (Plain scale & diagonal Scale).
2. Geometrical Construction and Curves – Construction of Polygons, Parabola, Hyperbola & ellipse

3. Projection of Points, Lines and Surfaces – orthographic projection- first angle and third angle projection, projection of lines and surfaces- Hexagon
4. Projection of Solids – (Cube, Pyramid, Prism, cylinder and Cone)
5. Sectional Views – for simple solid objects
6. Introduction to Computer Aided Drafting – using auto cad & / or similar software- Introduction to Cartesian and polar coordinate systems, absolute and relative coordinates; Basic editing commands: line, point, trace, rectangle, polygon , circle, arc, ellipse, polyline; editing methods; basic object selection methods – window and crossing window, erase, move, copy, offset, fillet, chamfer, trim, extend, mirror; display command; zoom, pan, redraw, regenerate; simple dimensioning and text, simple exercises.

Paper Name: Extra-Curricular Activity (NSS / NCC)

Paper Code: XC 181

Contact: 0L: 0T:2P

Credit: 1

Course Objective: The objectives of the course are as follows

1. To increase student awareness about the weaker and unprivileged sections of society.
2. To expose students to environmental issues and ecological concerns.

3. To make students self-aware about their participatory role in sustaining society and the environment.

Course Content

List of Activities:

- a) Creating awareness in social issues
- b) Participating in mass education programmes
- c) Proposal for local slum area development
- d) Waste disposal
- e) Environmental awareness
- f) Production Oriented Programmes
- g) Relief & Rehabilitation work during Natural calamities

Creating awareness in social issues:

1. Women's development – includes health, income-generation, rights awareness.
2. Hospital activities – Eg. writing letters for patients, guiding visitors
3. Old age home – visiting the aging in-mates, arranging for their entertainment.
4. Children's Homes - visiting the young in-mates, arranging for their entertainment
5. Linking with NGOs to work on other social issues. (Eg. Children of sex-workers)
6. Gender issues- Developing an awareness, to link it with Women's Cell of college

Participating in mass education programmes

1. Adult education
2. Children's education

Proposal for local slum area development

One or two slums to be identified and according to the needs, activities to be developed and proposals and reports are to be submitted.

Environmental awareness

- Resource conservation – Awareness to be developed on water, energy, soil.
- Preservation of heritage monuments- Marches, poster campaigns
- Alternative energy consciousness amongst younger school-children.
- Plantation and beautification- Plantation of trees, their preservation and upkeep, developing NSS parks.
- Waste disposal- Proper methods of domestic waste disposal.

Production Oriented Programmes

5. Working with people and explaining and teaching improved agricultural practices
6. Rodent control and pest control practices;
7. Soil-testing, soil health care and soil conservation;
8. Assistance in repair of agriculture machinery;
9. Work for the promotion and strengthening of cooperative societies in villages;
10. Assistance and guidance in poultry farming, animal husbandry, care of animal health etc.;
11. Popularization of small savings and
12. Assistance in procuring bank loans

Relief & Rehabilitation work during Natural calamities

- g. Assisting the authorities in distribution of rations, medicine, clothes etc.;
- h. Assisting the health authorities in inoculation and immunization, supply of medicine etc.;

- i. Working with the local people in reconstruction of their huts, cleaning of wells, building roads etc.;
- j. Assisting and working with local authorities in relief and rescue operation; Collection of clothes and other materials, and sending the same to the affected areas;

Subject: Mathematics II

Subject Code: M 201

Contact: 3L: 1T: 0P

Credits: 4

Prerequisites: Any introductory course on calculus.

Course Outcomes (COs):

On successful completion of the learning sessions of the course, the learner will be able to:

M 201.1: Recall the distinctive characteristics of improper integral, Laplace Transform, ordinary differential equation, graph theory.

M 201.2: Understand the theoretical working of improper integral, Laplace Transform, ordinary differential equation, graph theory.

M 201.3: Apply the principles of improper integral, Laplace Transform, ordinary differential equation, graph theory.

M 201.4: Analyze the application of improper integral, Laplace Transform, ordinary differential equation, graph theory.

M 201.5: Evaluate the result for application to the problems on improper integral, Laplace Transform, ordinary differential equation, graph theory.

M 201.6: Design graph to solve different real life problems.

Module I: Ordinary differential equations (First order)

[10L]

First order and first degree Exact equations, Necessary and sufficient condition of exactness of a first order and first degree ODE (statement only), Rules for finding Integrating factors, Linear equation, Bernoulli's equation, General solution of ODE of first order and higher degree (different forms with special reference to Clairaut's equation), Applications related to Engineering problems.

Module II: Ordinary differential equations (Higher order)

[10L]

General linear ODE of order two with constant coefficients, C.F. & P.I., D-operator methods for finding P.I., Method of variation of parameters, Cauchy- Euler equations, Solution of simultaneous linear differential equations, Applications related to Engineering problems.

Module III: Basic Graph Theory

[10L]

Graphs, Digraphs, Weighted graph, Connected and disconnected graphs, Complement of a graph, Regular graph, Complete graph, Subgraph, Walks, Paths, Circuits, Euler Graph, Cut-sets and cut-vertices, Matrix representation of a graph, Adjacency and incidence matrices of a graph, Graph isomorphism, Bipartite graph, Tree, Binary tree, Spanning tree of a graph, Minimal spanning tree, properties of trees, Algorithms: Dijkstra's Algorithm for shortest path problem, Determination of minimal spanning tree using Kruskal's and Prim's algorithm.

**** Extra lecture hours may be taken for this module**

Module IV: Laplace Transform (LT)

[10L]

Definition and existence of LT, LT of elementary functions, First and second shifting properties, Change of scale property; LT of $t f(t)$, LT of $f(t)/t$, LT of derivatives of $f(t)$, L.T. of $\int f(u) du$. Evaluation of improper integrals using LT, LT of periodic and step functions, Inverse LT: Definition and its properties; Convolution Theorem (statement only) and its application to the evaluation of inverse LT, Solution of linear ODE with constant coefficients (initial value problem) using LT. Applications related to Engineering problems.

Beyond Syllabus:

Combinatorics: Fundamental Principles, Permutations, Combinations, Binomial Coefficients.

Paper Name: Physics – I

Paper Code: PH 201

Contact: 3L:1T:0P

Credit: 4

PH.201.1: Describe various types mechanical resonance and its electrical equivalence

PH.201.2: Explain basic principles of Laser, Optical fibers and various types of semiconductors

PH.201.3: Apply superposition to explain interference and diffraction as well as apply wave mechanics for attainment of Heisenberg's uncertainty principle

PH.201.4: Analyze importance of light as a carrier of information and examine different crystallographic structures according to their co-ordination number and packing factors

PH.201.5: Justify the need of quantum mechanics as remedy to overcome limitations imposed by classical physics

Course Content

Module 1: Oscillations (8L)

- 1.1. Simple harmonic motion: Concepts with examples, Superposition of SHMs in two mutually perpendicular directions: Lissajous' figures, Engineering Applications and related Numerical problems 2L
- 1.2. Damped vibration: Differential equation and its solution, Logarithmic decrement, quality factor, Engineering Applications and related Numerical problems. 3L
- 1.3. Forced vibration: Differential equation and solution, Amplitude and Velocity resonance, Sharpness of resonance, relevant applications including LCR circuits, Numerical problems. 3L

Module 2: Classical Optics (10L)

- 2.1. Interference of light: Wave nature of light (Huygen's principle), Conditions of sustained interference double slit as an example; qualitative idea of spatial and temporal coherence, conservation of energy and intensity distribution; Newton's ring (qualitative descriptions of working principles and procedures-no deduction required). Engineering applications, Numerical Problems. 3L

Fresnel's biprism (beyond the syllabus). 1L(ext)

- 2.2. Diffraction of light: Fresnel and Fraunhofer class, Fraunhofer diffraction for plane transmission grating (elementary treatment of intensity distribution for N-slits), single slit and double slits as examples, missing order, Rayleigh criterion, resolving power of grating and microscope (Definition and formula; no deduction required). Engineering Applications, Numerical Problems. 4L

- 2.3. Polarization: Definition, plane of polarization, plane of vibration, Malus law, fundamental concepts of plane, circular and elliptical polarizations (only qualitative idea) with examples, Brewster's law, Double refraction: ordinary and extraordinary rays, Nicol's prism, Engineering applications, Numerical problems. 3L

2.4.

Module 3: Quantum Physics (9L)

- 3.1. Quantum Theory: Inadequacy of classical physics; Planck's quantum hypothesis-Qualitative (without deductions), particle concept of electromagnetic wave (example: photoelectric and Compton effect; qualitative discussions only), wave particle duality; phase velocity and group velocity; de Broglie wave; Davisson and Germer experiment. 4L

- 3.2. Quantum Mechanics 1: Concept of wave function, Physical significance of wave function, Probability interpretation; wave function normalization condition and its simple numerical applications; uncertainty principle-applications, Schrödinger equation (no mathematical derivation). 4L

3.3.

Module 4: X-ray & Crystallography (6L)

- 4.1. X-rays – Origin of Characteristic and Continuous X-ray, Bragg's law (No derivation), Determination of lattice constant, Applications, Numerical problems. 2L

- 4.2. Elementary ideas of crystal structure - lattice, basis, unit cell, Fundamental types of lattices – Bravais lattice, Simple cubic, fcc and bcc, hcp lattices, (use of models in the class during teaching is desirable) Miller indices and miller planes, Co-ordination number and Atomic packing factor, Applications, Numerical problems. 4L

Module 5: Modern Optics – I (8L)

- 5.1. Laser: Concepts of various emission and absorption process, working principle of laser, metastable state, Population Inversion, condition necessary for active laser action, optical resonator, ruby laser, He- Ne laser, semiconductor laser, Einstein A and B coefficients and equations, industrial and medical applications of laser. 5L

- 5.2. Fibre optics and Applications: Principle and propagation of light in optical fibres- Numerical aperture and Acceptance angle, V number, Types of optical fibres (material, refractive index, mode), Losses in optical fibre- attenuation, dispersion, bending, Numerical problems. 3L

Recommended Text Books for Physics – I:

Oscillations:

1. Classical Mechanics- J. C. Upadhyay (Himalya Publishers)
2. Classical Mechanics-Shrivastav
3. Classical Mechanics-Takwal & Puranik (TMH)
4. Sound-N. K. Bajaj (TMH)
5. Advanced Acoustics-D. P. Roy Chowdhury (Chayan Publisher)
6. Principles of Acoustics-B.Ghosh (Sridhar Publisher)
7. A text book of sound-M. Ghosh (S. Chand publishers)
8. Electricity Magnetism-ChattoPadhyay & Rakshit (New Central Book Agency)
9. A text book of Light- K.G. Mazumder & B.Ghoshs, (Book & Allied Publisher)

10. R.P. Singh (Physics of Oscillations and Waves)
11. A.B. Gupta (College Physics Vol. II)
12. Chattopadhyaya and Rakshit (Vibration, Waves and Acoustics)

Classical Optics & Modern Optics – I:

13. A text book of Light- K.G. Mazumder & B.Ghosh (Book & Allied Publisher)
14. A text book of Light-Brijlal & Subhramaniam, (S. Chand publishers)
15. Modern Optics-A. B. Gupta (Book & Allied Publisher)
16. Optics-Ajay Ghatak (TMH)
17. Optics-Hecht
18. Optics-R. Kar, Books Applied Publishers
19. Möler (Physical Optics)
20. E. Hecht (Optics)
21. E. Hecht (Schaum Series)
22. F.A. Jenkins and H.E White
23. C.R. Dasgupta (Degree Physics Vol 3)

Quantum Physics:

24. Introduction to Quantum Mechanics-S. N. Ghoshal (Calcutta Book House)
25. Quantum Mechanics-Bagde Singh (S. Chand Publishers)
26. Perspective of Quantum Mechanics-S. P. Kuilla (New Central Book Agency)
27. Quantum Mechanics-Binayak Datta Roy (S. Chand Publishers)
28. Quantum Mechanics-Bransden (Pearson Education Ltd.)
29. Perspective of Modern Physics-A. Beiser (TMH)
30. Eisberg & Resnick is published by Wiley India
31. A.K. Ghatak and S Lokenathan
32. E.E. Anderson (Modern Physics)
33. 33 .Haliday, Resnick & Krane : Physics Volume 2 is Published by Wiley India
34. Binayak Dutta Roy [Elements of Quantum Mechanics]

X-ray & Crystallography:

35. Solid state physics-Puri & Babbar (S. Chand publishers)
36. Materials Science & Engineering-Kakani Kakani
37. Solid state physics- S. O. Pillai
38. Introduction to solid state physics-Kittel (TMH)
39. Solid State Physics and Electronics-A. B. Gupta, Nurul Islam (Book & Allied Publisher)
40. S.O. Pillai (a. Solid state physics b. Problem in Solid state physics)

General Reference:

1. Refresher courses in physics (Vol. 1, Vol. 2 & Vol. 3)-C. L. Arora (S. Chand Publishers)
2. Basic Engineering Physics-Amal Chakraborty (Chaya Prakashani Pvt. Ltd.)
3. Basic Engineering Physics-I -Sujoy Bhattacharya, Saumen Paul (TMH)
4. Engineering Physics Vol: 1-Sudipto Roy, Tanushri Ghosh, Dibyendu Biswas (S. Chand).

Course Name: Basic Electronics Engineering**Code: ECE 201****Contact: 3L: 0T: 0P****Total Contact Hours: 36****Credit: 3**

Prerequisites: A basic course in Electronics and Communication Engineering Progresses from the fundamentals of electricity, direct current (DC) devices and circuits, series and parallel circuits to the study of active and passive components, Ohm's Law, Kirchoff's Law i.e. KVL, KCL, Ampere's Law etc.

Course Outcome: EC201

EC 201.1: Understand the PN junction diode, ideal diode, diode models and its circuit analysis, Remember the application of diodes and special diodes.

EC 201.2: Analyze how operational amplifiers are modelled and analysed, and to design. Op-Amp circuits to perform operations such as integration differentiation on electronic signals.

EC 201.3: Assess both positive and negative feedback in electronic circuits.

EC 201.4: Develop the capability to analyse and design simple circuits containing non-linear elements such as transistors using the concepts of load lines, operating points and incremental analysis.

Course Content

Module – I: Basics of semiconductor

6L

Conductors, Insulators, and Semiconductors- crystal structure, Fermi Dirac function, Fermi level, E-k and Energy band diagrams, valence band, conduction band, and band gap; intrinsic, and extrinsic (p-type and n-type) semiconductors, position of Fermi level in intrinsic and extrinsic semiconductor, drift and diffusion current – expression only (no derivation) , mass action law , charge neutrality in semiconductor, Einstein relationship in semiconductor , Numerical problems on- Fermi level, conductivity, mass action law, drift and diffusion current .

Module – II: P-N Junction Diode and its applications

8L

p-n junction formation and depletion region , energy band diagram of p-n junction at equilibrium and barrier energy , built in potential at p-n junction , energy band diagram and current through p-n junction at forward and reverse bias, V-I characteristics and current expression of diode , temperature dependencies of V-I characteristics of diode , p-n junction breakdown – conditions , avalanche and Zener breakdown , Concept of Junction capacitance, Zener diode and characteristics.

Diode half wave and full wave rectifiers circuits and operation (IDC , Irms , V_{Dc} , V_{rms}) , ripple factor without filter, efficiency ,PIV,TUF; Reduction of ac ripples using filter circuit (Qualitative analysis); Design of diode clipper and clamper circuit - explanation with example, application of Zener diode in regulator circuit. Numerical problems.

Module – III: Bipolar junction transistor(BJT)

6L

Formation of PNP/NPN Transistors ,energy band diagram, current conduction mechanism, CE,CB,CC configurations, transistor static characteristics in CE,CB and CC mode, junction biasing condition for active, saturation and cut-off modes,current gain α , β and γ , early effect.

Biasing and bias stability; biasing circuits - fixed bias; voltage divider bias; collector to base bias , D.C. load line and Quiescent point, calculation of stability factors for different biasing circuits.

BJT as an amplifier and as a switch – Graphical analysis; Numerical Problems.

Module – IV: Field effect transistor (FET)

4L

Concept of field effect, channel width modulation Classification of FETs-JFET, MOSFET, operating principle of JFET.drain and transfer characteristics of JFET (n-channel and p-channel), CS,CG,CD configurations, Relation between JFET parameters. FET as an amplifier and as a switch– graphical analysis. E-MOSFET (n-channel and p-channel), D-MOSFET (n-channel and p-channel), Numerical Problems .

Module – V: Feedback and Operational Amplifier 10L

Concept of feedback with block diagram, positive and negative feedback, gain with feedback. Feedback topologies, effect of feedback on input and output impedance, distortion, concept of oscillation and Barkhausen criterion.

Operational amplifier – electrical equivalent circuit ,ideal characteristics , Non ideal characteristics of op-amp – offset voltages ;bias current ;offset current; Slew rate ; CMRR and bandwidth, Configuration of inverting and non-inverting amplifier using Op-amp, closed loop voltage gain of inverting and non-inverting amplifier , Concept of virtual ground, Applications op-amp – summing amplifier; differential amplifier; voltage follower ; basic differentiator and integrator .

Problems on Characteristics of Op-amp, CMRR, slew rate, amplifier and application of Op-amp to be discussed. Any other relevant problems related to topic may be discussed or assigned.

Module – VI: Cathode Ray Oscilloscope (CRO) 2L

Operating principle of CRO with block diagram, measurement of voltage, frequency and phase.

Module – VII: Digital Electronics 4L

Binary numbers and conversion, Basic Boolean algebra, Logic gates (AND,OR,NOR,NOT,NAND,XOR) and realization of functions.

Text Books:

Course Name: Computer Fundamentals & Principle of Computer Programming

Code: CS 201

Total No. of Lectures: 40

Credits: 4

Course Outcome:

CS201.1 To identify the working principle of input and output devices of Computers
memorize the basic terminology used in computer programming

CS201.2 To express programs in C language and use different data types for writing the programs

CS201.3 To implement programs using the dynamic behavior of memory by the use of pointers

CS201.4 To explain the difference between call by value and call by address

CS201.5 To write programs using basic data files and developing applications for real world problems

Course Content

Fundamentals of Computer:

(10L)

History of Computer, Generation of Computer, Classification of Computers

1L

Basic structure of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices

2L

Binary and Allied number systems representation of signed & unsigned numbers, BCD, ASCII, Binary number Arithmetic – Addition and Subtraction (using 1's complement and 2's complement)

2L

Logic gates – AND, OR, NOT, NAND, NOR, EX-OR, EX-NOR - only truth tables, logic gate symbols and logic equations for gates only

1L

Assembly language, high level language, machine level language, compiler and assembler (basic concepts)

1L

Basic concepts of operating systems like MS DOS, MS WINDOW, UNIX

1L

Problem solving-Algorithm & flow chart

2L

C Fundamentals:

(30L)

Variable and Data Types:

The C character set identifiers and keywords, data type & sizes, variable names, declaration, statements

3L

C Operators & Expressions:

Arithmetic operators, relational operators, logical operators, increment and decrement operators, bitwise operators, assignment operators, conditional operators, special operators - type conversion, C expressions, precedence and associativity.

Input and Output: Standard input and output, formatted output - printf, formatted input scanf, bit fields

5L

Branching and Loop Statements:

Statement and blocks, if - else, switch, goto and labels, Loops - while, for, do while, break and continue

3L

Fundamentals and Program Structures:

auto, external, static and register variables

Functions, function types, function prototypes, functions returning values, functions not returning values, scope rules, recursion, C preprocessor and macro

6L

Arrays, Strings and Pointers:

One dimensional arrays, Two-dimensional arrays, Multidimensional arrays. Passing an array to a function
Character array and string, array of strings, Passing a string to a function, String related functions

Pointers, Pointer and Array, Pointer and String, Pointer and functions, Dynamic memory allocation
6L

Files handling with C:

formatted and unformatted files, Command line arguments, fopen, fclose, fgetc, fputc, fprintf, fscanf function

4L

Structures and Unions:

Basic of structures, arrays of structures, structures and pointers, structures and functions

3L

Text Book:

1. Kerninghan B.W. & Ritchie D.M. - The C Programming Language
2. Gottfried - Programming with C Schaum

Course Name: Engineering Thermodynamics & Fluid Mechanics ME 201

Course Outcomes (COs):

On successful completion of the learning sessions of the course, the learner will be able to:

ME 201.1: Know about thermodynamic equilibrium, heat & work transfer, First law and its application.

ME 201.2: Understand the basic concepts of Heat Engine, Entropy from Second law of thermodynamics.

ME 201.3: Know the thermodynamic characteristics of a pure substance and its application in power cycles (Simple Rankine cycles, Air Standard cycles)

ME 201.4: Knowledge of basic principles of fluid mechanics, and ability to analyze fluid flow problems with the application of the momentum and energy equations

Course Content

Module 1:

8L+3T

Basic Concepts of Thermodynamics:

Introduction: Microscopic and Macroscopic viewpoints

Definition of Thermodynamic systems: closed, open and isolated systems Concept of Thermodynamics state; state postulate.

Definition of properties: intensive, extensive & specific properties. Thermodynamic equilibrium

Thermodynamic processes; quasi-static, reversible & irreversible processes; Thermodynamic cycles. Zeroth law of thermodynamics. Concept of empirical temperature.

Heat and Work:

Definition & units of thermodynamic work.

Examples of different forms of thermodynamic works; example of electricity flow as work. Work done during expansion of a compressible simple system

Definition of Heat; unit of Heat

Similarities & Dissimilarities between Heat & Work

Ideal Equation of State, processes; Real Gas:

Definition of Ideal Gas; Ideal Gas Equations of State.

Thermodynamic Processes for Ideal Gas; P-V plots; work done, heat transferred for isothermal, isobaric, isochoric, isentropic & polytropic processes.

Equations of State of Real Gases: Van der Waal's equation; Virial equation of state.

Properties of Pure Substances:

p-v, T-s & h-s diagrams of pure substance like H₂O

Introduction to steam table with respect to steam generation process; definition of saturation, wet & superheated status.

Definition of dryness fraction of steam, degree of superheat of steam.

Module 2:

4L+3T

1st Law of Thermodynamics:

Definition of Stored Energy & Internal Energy 1st Law of Thermodynamics for cyclic processes Non Flow Energy Equation.

Flow Energy & Definition of Enthalpy.

Conditions for Steady State Steady flow: Steady State Steady Flow Energy Equation.

Module 3:

6L+3T

2nd Law of Thermodynamics:

Definition of Sink, Source Reservoir of Heat.

Heat Engine, heat Pump & Refrigerator; Thermal efficiency of Heat Engines & co-efficient of performance of Refrigerators

Kelvin – Planck & Clausius statements of 2nd Law of Thermodynamics Absolute or Thermodynamic scale of temperature, Clausius Integral Entropy

Entropy change calculation for ideal gas processes. Carnot Cycle & Carnot efficiency PMM-2; definition & its impossibility

Module 4:

6L+3T

Air standard Cycles for IC engines:

Otto cycle; plot on P-V, T-S planes; Thermal efficiency Diesel cycle; plot on P-V, T-S planes; Thermal efficiency

Rankine cycle of steam

Chart of steam (Mollier's Chart)

Simple Rankine cycle plot on P-V, T-S, h-s planes Rankine cycle efficiency with & without pump work (Problems are to solved for each module)

Module 5:

9L+3T

Properties & Classification of Fluids:

Ideal & Real fluids

Newton's law of viscosity; Newtonian and Non-Newtonian fluids

Compressible and Incompressible fluids

Fluid Statics:

Pressure at a point

Measurement of Fluid Pressure:

Manometers: simple & differential U-tube

Inclined tube

Fluid Kinematics:

Stream line

Laminar & turbulent flow

external& internal flow

Continuity equation

Dynamics of ideal fluids:

Bernoulli's equation

Total head; Velocity head; Pressure

head Application of Bernoulli's equation

Measurement of Flow rate:

Basic principles

Venturimeter, Pilot tube, Orificemeter

(Problems are to be solved for each module)***Engineering Thermodynamics*****Text:**

Paper Name: Computer Fundamentals & Principle of Computer Programming Lab

Paper Code: CS291

Total Contact Hours: 36

Credit: 2

Prerequisites:

Basic Computer Knowledge

Course Outcome:

CS291.1. To identify the working of different operating systems like DOS, Windows, Linux

CS291.2. To express programs in C language

CS291.3. To implement programs connecting decision structures, loops

CS291.4. To experiment with user defined functions to solve real time problems

CS291.5. To write C programs using Pointers to access arrays, strings, functions, structures and files

Experiment should include but not limited to the following:

1. Some basic commands of DOS, Windows and Linux Operating System, File handling and Directory structures, file permissions, creating and editing simple C program, compilation and execution of C program.
2. Writing C Programs on variable, expression, operator and type-casting.
3. Writing C Programs using different structures of if-else statement and switch-case statement.
4. Writing C Programs demonstrating use of loop (for loop, while loop and do-while loop) concept and use of break and continue statement.
5. Writing C Programs demonstrating concept of Single & Multidimensional arrays.
6. Writing C Programs demonstrating concept of Function and Recursion.
7. Writing C Programs demonstrating concept of Pointers, address of operator, declaring pointers and operations on pointers.
8. Writing C Programs demonstrating concept of structures, union and pointer to structure.
9. Writing C Programs demonstrating concept of String and command line arguments.
10. Writing C Programs demonstrating concept of dynamic memory allocation.
11. Writing C Programs demonstrating concept of File Programming.

Paper Name: Physics – II Laboratory**Paper Code: PH 291****Contact: 0L:0T:3P****Credit: 2****Prerequisites:** Knowledge of Physics upto 12th standard.**Course Outcomes:**

At the end of the course students' should have the

PH 291.1 :Demonstrate experiments allied to their theoretical concepts**PH 291.2 :**Conduct experiments using LASER, Optical fiber, Torsional pendulum, Spectrometer**PH 291.3 :**Participate as an individual, and as a member or leader in groups in laboratory sessions actively**PH 291.4 :**Analyze experimental data from graphical representations , and to communicate effectively them in Laboratory reports including innovative experiments**General idea about Measurements and Errors (One Mandatory):**

- Error estimation using Slide calipers/ Screw-gauge/travelling microscope for one experiment.
- Proportional error calculation using Carrey Foster Bridge.

Any 7 to be performed from the following experiments

Experiments on Oscillations & Elasticity:

1. Study of Torsional oscillation of Torsional pendulum & determination of time period using various load of the oscillator.
2. Experiments on Lissajous figure (using CRO).
3. Experiments on LCR circuit.
4. Determination of elastic moduli of different materials (Young's modulus and Rigidity modulus)

Experiments on Optics:

5. Determination of wavelength of light by Newton's ring method.
6. Determination of wavelength of light by Laser diffraction method.
7. Determination of numerical aperture and the energy losses related to optical fiber experiment
8. Measurement of specific rotation of an optically active solution by polarimeter.

Experiments on Quantum Physics:

9. Determination of Planck's constant using photoelectric cell.
10. Verification of Bohr's atomic orbital theory through Frank-Hertz experiment.

****In addition it is recommended that each student should carry out at least one experiment beyond the syllabus/one experiment as Innovative experiment.**

Probable experiments beyond the syllabus:

1. Determination of wavelength of light by Fresnel's bi-prism method (beyond the syllabus).
2. Study of half-wave, quarter-wave plate (beyond the syllabus)
3. Study of dispersive power of material of a prism.
4. Study of viscosity using Poyseullie's capillary flow method/using Stoke's law.
5. Measurement of nodal and antinodal points along transmission wire and measurement of wave length.
6. Any other experiment related to the theory.

Paper Name: Basic Electronics Engineering Laboratory

Paper Code: EC 291

Contact: 0L:0T:3P

Credit: 2

Prerequisites: A basic course in electronics and Communication engineering Progresses from the fundamentals of electricity, active and passive components, basic electronics laws like Ohm's law, Ampere's law

Course Outcome:

EC 291.1. Knowledge of Electronic components such as Resistors, Capacitors, Diodes, Transistors measuring equipment like DC power supply, Multimeter, CRO, Signal generator, DC power supply.

EC 291.2. Analyze the characteristics of Junction Diode, Zener Diode, BJT & FET and different types of Rectifier Circuits.

EC 291.3. Determination of input-offset voltage, input bias current and Slew rate, Common-mode Rejection ratio, Bandwidth and Off-set null of OPAMPs.

EC 291.4. Able to know the application of Diode, BJT & OPAMP.

EC 291.5. Familiarization and basic knowledge of Integrated Circuits

Course Contents

List of Experiments:

1. Familiarization with passive and active electronic components such as Resistors, Inductors, Capacitors, Diodes, Transistors (BJT) and electronic equipment like DC power supplies, millimeters etc.
2. Familiarization with measuring and testing equipment like CRO, Signal generators etc.
3. Study of I-V characteristics of Junction diodes.
4. Study of I-V characteristics of Zener diodes.
5. Study of Half and Full wave rectifiers with Regulation and Ripple factors.
6. Study of I-V characteristics of BJTs.
7. Study of I-V characteristics of Field Effect Transistors.
8. Determination of input-offset voltage, input bias current and Slew rate of OPAMPs.
9. Determination of Common-mode Rejection ratio, Bandwidth and Off-set null of OPAMPs.
10. Study of OPAMP circuits: Inverting and Non-inverting amplifiers, Adders, Integrators and Differentiators.
11. Study of Logic Gates and realization of Boolean functions using Logic Gates.
12. Study of Characteristic curves for CB, CE and CC mode transistors.
13. Innovative Experiment

Workshop Practice**Code: ME 292****Contact: 0L: 1T: 3P****Total Contact Hours: 36****Credit: 3****Prerequisites:** Higher Secondary with Physics, Chemistry & Mathematics**Course Outcomes (COs):**

On successful completion of the learning sessions of the course, the learner will be able to:

ME 292.1: Gain basic knowledge of Workshop Practice and Safety useful for our daily living.**ME 292.2:** Identify Instruments of a pattern shop like Hand Saw, Jack Plain, Chisels etc and performing operations like such as Marking, Cutting etc used in manufacturing processes.**ME 292.3:** Gain knowledge of the various operations in the Fitting Shop using Hack Saw, various files, Scriber, etc to understand the concept of tolerances applicable in all

kind of manufacturing.

ME 292.4: Get hands on practice of in Welding and various machining processes which give a lot of confidence to manufacture physical prototypes in project works.

Course Content

List of Activities:

| Sl. No. | Syllabus | Contact Hrs |
|----------|--------------------|-------------|
| Module 1 | Pattern Making | 6 |
| Module 2 | Sheet Metal Work | 6 |
| Module 3 | Fitting | 9 |

Paper Name: Soft Skill Development**Paper Code: MC 281****Contact: 0L:0T:2P****Course Objective:**The objectives of this course are as follows:

1. To expose the students to different aspects of corporate life and workplace behavior To introduce workplace behavioral norms, etiquettes and standards
2. To equip students to face interviews, presentations and other professional interactions

| Module | Content |
|--------|------------------------------------------------|
| One | Communication Training |
| Two | Communication Training (Accent Neutralization) |
| Three | Business Etiquette |
| Four | CV / Resume Writing |
| Five | Corporate Life and Protocols |
| Six | Group Discussion |

| | |
|--------|--------------------------------------|
| Seven | Leadership Skill |
| Eight | Team Work |
| Nine | Public Speaking and Interview Basics |
| Ten | Business Telephone Etiquette |
| Eleven | Reading skill |

Module 1: Communication Training (2L)

1. Organisational Communication and Structure.
2. Vocabulary related to Corporate Operation.
3. Modes of Communication (Telephone, Conference Call, Team Huddle, Public Relation etc.
4. Communication with Clients, Customers, Suppliers etc.
5. Verbal and Non-Verbal Communication, Proxemics and Para Language.
6. Vocabulary Building (Synonym / Antonym / One word Substitution etc.)

Module 2: Communication Training (Accent Neutralisation) (2L)

7. Mother Tongue Influence
8. Vowel Sounds and Consonantal Sounds
9. Pronunciation and Neutral Accent.
10. Intonation.
11. Rate of Speech, Pausing, Pitch Variation and Tone.

Module 3: Business Etiquette (2L)

12. Presenting oneself in the Business Environment.
13. Corporate Dressing and Mannerism.
14. Table Etiquette (Corporate Acculturation, Office parties, Client/Customer invitations etc.)
15. Multi Cultural Etiquette.
16. Cultural Difference.
17. E-mail Etiquette.

Module 4: Job Application And CV / Video Resume (2L)

18. Format (Chronological, Skill Oriented, Functional etc.)
19. Style and Appearance.
20. Writing Tips and Video Content Presentation tips.
21. Types of Cover Letter or Job Application Letter.

Module 5: Introduction To Corporate Life And Protocols (2L)

22. Introduction of Companies (Domain Specific)
23. Opportunities and Growth Plan.
24. Performance and Corporate Behaviour.
25. Service Level Agreement and Corporate Jargon.
26. Networking and Adapting to Culture, Technology and Environment.

Module 6: Group Discussion (2L)

27. Introduction, Definition and Purpose.

28. Types of Group Discussion.
29. Strategies and Protocols of Group Discussion.
30. Skills and Parameters of Evaluation.
31. Practice Session and Video Viewing Task.

Module 7: Leadership Skill (2L)

32. Leadership Theories.
33. Traits and Skills of the Leader.
34. Roles, Duties and Responsibilities.
35. Case Study of Leaders.
36. Interpersonal relationship with Team.

Module 8: Team Work (2L)

37. Concept of Team Culture.
38. Stages of Team Development (Forming, Storming, Norming, Performing, Adjourning)
39. Team Working Agreement (Participation, Decision Making, Problem Solving.
40. Conflict Management, Flexibility, Negotiation Skill.
41. Team Building (Assess, Plan, Execute and Evaluate)

Module 9: Public Speaking and Interview Basics (2L)

42. Extempore.
43. JAM.
44. Interview Skill
45. Interview over Telephone, Video Conference Interview etc.

Module 10: Business Telephone Etiquette (2L)

46. Five Phases of a Business Call.
47. Pitch, inflection, Courtesy and Tone.
48. Understanding, Rate of Speech, Enunciation.
49. Hold Procedure.
50. Cold and Hot Transfer protocols.
51. Dealing with Different Types of Customers (Irate, Talkative, Turnaround etc.)

Module 11: Reading Skill

52. Vocabulary from context, speed reading, skimming, inferring, comprehension test etc.

| ASSESSMENT | | |
|------------|--------------------------------|----|
| 1. | Viva | 10 |
| 2. | Personal Skill Enhancement Log | 25 |
| 3. | Movie Making: Video Resume | 25 |
| 4. | Term End Project | 40 |

Paper Name: Mathematics – III

Paper Code: M301

Contact: 3L: 1T: 0P

Credit: 4

Prerequisites: Any introductory course on Calculus and Combinatorics.

Course Outcome: On successful completion of the learning sessions of the course, the learner will be able to

M301.1 : Recall the distinctive characteristics of matrix algebra and calculus.

M301.2: Understand the theoretical working of matrix algebra and calculus.

M301.3: Apply the principles of matrix algebra and calculus to address problems in their disciplines.

M301.4: Examine the nature of system using the concept of matrix algebra and calculus.

Course Content

MODULE I: **Fourier series and Fourier Transform** **[10L]**

Introduction, Periodic functions: Properties, Even & Odd functions: Properties, Special wave forms: Square wave, Half wave Rectifier, Full wave Rectifier, Saw-toothed wave, Triangular wave.

Euler's Formulae for Fourier Series, Fourier Series for functions of period 2π , Fourier Series for functions of period π , Dirichlet's conditions, Sum of Fourier series. Examples. Theorem for the convergence of Fourier series (statement only). Fourier Series of a function with its periodic extension. Half Range Fourier series: Construction of Half range Sine Series, Construction of Half range Cosine Series.

Parseval's identity (statement only). Examples.

Fourier Transform:

Fourier Integral Theorem (statement only), Fourier Transform of a function, Fourier Sine and Cosine Integral Theorem (statement only), Fourier Cosine & Sine Transforms. Fourier, Fourier Cosine & Sine Transforms of elementary functions. Properties of Fourier Transform: Linearity, Shifting, Change of scale, Modulation. Examples. Fourier Transform of Derivatives. Examples. Convolution Theorem (statement only), Inverse of Fourier Transform, Examples.

Discussions on application of the topic related to EE

MODULE II: Probability Distributions [10L]

Definition of random variable. Continuous and discrete random variables. Probability density function & probability mass function for single variable only. Distribution function and its properties (without proof). Examples. Definitions of Expectation & Variance, properties & examples. Some important discrete distributions: Binomial, Poisson. Continuous distributions: Normal. Determination of Mean, Variance and standard deviation of the distributions. Correlation & Regression analysis, Least Square method, Curve fitting.

Discussions on application of the topic related to EE

| | | |
|--------------------|-------------------------------------|--------------|
| MODULE III: | Calculus of Complex Variable | [12L] |
|--------------------|-------------------------------------|--------------|

Introduction to Functions of a Complex Variable, Concept of Limit, Continuity and Differentiability. Analytic functions, Cauchy-Riemann Equations (statement only). Sufficient condition for a function to be analytic. Harmonic function and Conjugate Harmonic function, related problems. Construction of Analytic functions: Milne Thomson method, related problems.

Complex Integration:

Concept of simple curve, closed curve, smooth curve & contour. Some elementary properties of complex Integrals. Line integrals along a piecewise smooth curve. Examples. Cauchy's theorem (statement only). Cauchy-Goursat theorem (statement only). Examples. Cauchy's integral formula, Cauchy's integral formula for the derivative of an analytic function, Cauchy's integral formula for the successive derivatives of an analytic function. Examples. Taylor's series, Laurent's series. Examples.

Zeros and Singularities of an Analytic Function & Residue Theorem:

Zero of an Analytic function, order of zero, Singularities of an analytic function. Isolated and non-isolated singularity, essential singularities. Poles: simple pole, pole of order m . Examples on determination of singularities and their nature. Residue, Cauchy's Residue theorem (statement only), problems on finding the residue of a given function, Introduction Conformal transformation, Bilinear transformation, simple problems.

Discussions on application of the topic related to EE

MODULE IV: Basic concepts of Partial differential equation (PDE) [12L]

Origin of PDE, its order and degree, concept of solution in PDE. Introduction to different methods of solution: Separation of variables, Laplace & Fourier transforms methods.

Topic: Solution of Initial Value & Boundary Value PDE's by Separation of variables, Laplace & Fourier transform methods.

PDE I: One dimensional Wave equation.

PDE II: One dimensional Heat equation.

PDE III: Two dimensional Laplace equations.

Introduction to series solution of Ordinary differential equation (ODE): Validity of the series solution of an ordinary differential equation. General method to solve $P_0 y'' + P_1 y' + P_2 y = 0$ and related problems to Power series method. Brief review on series solution of Bessel & Legendre differential equation.

Concepts of generating functions.

Discussions on application of the topic related to EE

Paper Name: Digital Electronics

Paper Code: EC(EE) 301

Contact: 3L:1T:0P

Credit: 3

Prerequisites: Knowledge of Basic Electronics and mathematics.

Course Outcome: On successful completion of the learning sessions of the course, the learner will be able to

CO1: Acquired knowledge about solving problems related to number systems conversions and Boolean algebra and design logic circuits using logic gates to their simplest forms using De Morgan's Theorems; Karnaugh Maps.

CO2: Design of combinational circuits

CO3: Design of various synchronous and asynchronous sequential circuits using State Diagrams & Tables.

CO4: Understand DAC & ADC technique and corresponding circuits

CO5: Analyze logic family interfaces, switching circuits & memory storage devices to Plan and execute projects.

Course Content

Module – 1:

[12L]

Binary, Octal and Hexadecimal number system representation and their conversions; BCD, ASCII, EBCDIC, Gray codes and their conversions; Hamming Code. Signed binary number representation with 1's, 2's, 9's and 10's complement methods, Binary arithmetic.

Boolean algebra; Various Logic gates- their truth tables and circuits; Representation in SOP and POS forms; Minimization of logic expressions by algebraic method, K-map method, Quine-McCluskey minimization technique (Tabular Method).

Module – 2:

[11L]

Combinational circuits- Half Adder, Full Adder, Serial & Parallel Adder, Carry Look Ahead Adder, BCD Adder, Half Subtractor, Full Subtractor circuits, Adder-Subtractor Circuit. Encoder, Decoder, Multiplexer, De Multiplexer, Adder & Subtractor Design using decoder & multiplexer, Comparator and Parity Generator-Checker.

Module – 3:

[11L]

Sequential Circuits- latch & Flip Flops-S-R, J-K, D and T, Conversion of Flip Flops, Various types of Shift Registers-SISO, SIPO, PISO, PIPO, Bidirectional & Universal Shift. Counters-Synchronous, Asynchronous, Irregular, Self Correcting Ring & Johnson Counter. Application of Counter (Stepper motor control).

Module – 4:

[6L]

Parameters of D/A & A/D Converters. Different types of A/D -Flash Type, Successive Approximation and Dual Slope and D/A -R-2R Ladder.

Logic families- TTL, ECL, MOS and CMOS, their operation and specifications. TTL Equivalent Circuit.

Paper Name: Analog Electronic Circuits

Paper Code: EC(EE) 302

Contact: 3L:0T:0P

Credit: 3

Prerequisites: Basic knowledge about electronic components(R,L,C). Network Theorems (Kirchoffs law, Thevenin's theorem, Norton's theorem, Miller theorem etc.). Basic knowledge about the operation of semiconductor devices (Diode, Transistor, JFET, MOSFET, etc.), Basic idea of integrated circuit, Voltage current equations. Basic knowledge of Differentiation, Integration, Differential equation, matrix etc.

Course Outcome:

EC (EE) 302.1: Understand linear and nonlinear applications of OPAMP

EC (EE) 302.2: Understand effects of different feedback mechanism in amplifier circuit.

EC (EE) 302.3: Analyze transistor amplifier circuit.

EC (EE) 302.4: Student will be able to design power amplifier circuit.

Course Content

Module – 1: Filters and Regulators

[4L]

Capacitor filter, π -section filter, ripple factor, series and shunt voltage regulator, line and load regulation, 78xx and 79xx series, concept of SMPS.

Module – 2: Transistor Biasing and Stability

[4L]

Biasing technique, Q-point & its Stability, Self Bias-CE configuration, Bias Compensation techniques, h-parameter model of transistors, Expression for voltage gain, current gain, input and output impedance, power gain, Trans-resistance & Trans-conductance Emitter follower Circuit.

Module – 3: Transistor Amplifier

[5L]

Different coupling techniques, RC coupled amplifier, functions of all components, derivation of voltage gain, current gain, input impedance and output impedance, High frequency model of transistors (hybrid- π model), frequency response characteristics, Expression for lower and upper half frequencies, bandwidth, and concept of wide band amplifier

Module – 4: Feedback Amplifier and Oscillators [5L]

Concept of feedback, negative & positive feedback, Voltage/Current & Series/Shunt Feedback, Barkhausen criterion, RC Oscillators-Phase shift and Wein bridge oscillators, LC Oscillator-Colpitts, Hartley's and crystal oscillators.

Module – 5: Operational Amplifier [5L]

Ideal OPAMP, Differential amplifier, Constant current source (Current mirror etc), Level Shifter, CMRR, Open & closed loop circuits, importance of feedback loop (positive & negative), inverting & non-inverting amplifiers, Voltage follower/Buffer circuits,

Module – 6: Application of Operational Amplifiers [5L]

Adder & subtractor circuit, practical integrator & differentiator circuit, Instrumentation Amplifier, Log & Anti-log amplifiers, multipliers, Precision Rectifier, Comparator & Schmitt Trigger, Voltage to Current & Current to voltage converter.

Module – 7: Power Amplifier [3L]

Power amplifiers: Class A, B, AB, C, Conversion efficiency, Tuned amplifier.

Module – 8: Multivibrator [2L]

Multivibrators: Astable, Monostable, Bistable multivibrators; Astable and Monostable operation using 555 timers

Module – 9: Special Function Circuits [2L]

VCO, PLL

Paper Name: Circuit Theory and Network**Paper Code: EE301****Contact: 3L: 1T: 0P****Credit: 4****Prerequisites:** Concepts of Basic Mathematics. Concepts of Basic Electrical Engineering

Course Objective: Finds utility in understanding the concepts in other electrical subjects such as Electrical Power System, Electrical Measurement and Instrumentation, & Electrical Machines, Control System etc.

Course Outcome:**EE.301.1:** Understand the basic concepts of electric, magnetic and filter circuits.**EE.301.2:** Synthesize different electrical circuits with network theorems.**EE.301.3:** Analyze the transient condition of electrical circuits.**EE.301.4:** Analyze two port circuit behaviors.**Course Content****MODULE – I:****[3L]**

Continuous & Discrete, Fixed & Time varying, Linear and Nonlinear, Lumped and Distributed, Passive and Active networks, Independent & Dependent sources, Step, Ramp, Impulse, Sinusoidal, Square, Saw tooth signals, Source transformation, KVL & KCL.

MODULE – II:**[5L]**

Magnetic coupling, Polarity of coils, Polarity of induced voltage, Concept of Self and Mutual inductance, Coefficient of coupling, Modeling of coupled circuits, Solution of problems.

MODULE – III:**[8L]**

Definition of Laplace Transform, Advantages, Initial Value theorem and final value theorem, Poles, zeros, transfer function, Laplace Transform of different types of signals, Step & Impulse response of RL, RC, RLC circuits (series & parallel), Transient Analysis Of different Electric Circuits with & without initial conditions, using Laplace Transform, Laplace Transform of Periodic Functions.

MODULE – IV:**[9L]**

Loop variable analysis, Node variable analysis, Superposition Theorem, Thevenin's Theorem, Norton's Theorem, Maximum Power Transfer Theorem, Millman's Theorem, Tellegen and Reciprocity Theorems, Compensation theorem Solution of Problems with DC & AC sources.

MODULE – V:**[5L]**

Concept of Tree, Branch, Tree link, Incidence Matrix, Cut Set Matrix, Tie Set Matrix, Formation of incidence, tie set, cut set matrices of electric circuits.

MODULE – VI:**[8L]**

Open circuit Impedance & Short circuit Admittance parameter, Transmission parameter, Hybrid Parameter, Conditions of Reciprocity And Symmetry, Interrelation between different parameters, Driving point impedance & Admittance. Interconnection of Two Port Networks.

Solution of problems.

MODULE – VII:**[4L]**

Analysis and synthesis of Low pass, High pass, Band pass, Band reject, All pass Filters (first and second order only) using operational amplifier.

Text Books:

Paper Name: Field Theory

Paper Code: EE302

Contact: 3L: 0T: 0P

Credit: 3

Prerequisites: Concept of Mathematics, Physics and Basic Electrical Engineering

Course Outcome:

EE302.1: Know the orthogonal co-ordinates and their transformation to solve & analyze problems on vector calculus.

EE302.2: Know the basic laws of electrostatics and electromagnetism and define associated terms.

EE302.3: Understand Maxwell's equation in different forms.

EE302.4: Understand the propagation of EM waves associated with different Electrical Networks.

Course Content

Module – 1: Co-ordinate systems

[6L]

Cartesian coordinates, Circular cylindrical coordinates, Spherical coordinates & their transformation. Differential length, area and volume in different coordinate systems. Solution of problems.

Module – 2: Introduction to Vector Calculus

[4L]

DEL operator, Gradient of a scalar, Divergence of a vector & Divergence theorem, Curl of a Vector & Strokes theorem, Laplacian of a scalar, Solution of problems

Module – 3: Electrostatic Field

[5L]

Coulomb's law, field intensity, Gauss's law, Electric potential and potential gradient, Relation between E and V, an Electric dipole and flux lines. Energy density in electrostatic field. Boundary conditions: Dielectric-dielectric, Conductor –dielectric, Conductor-free space. Poisson's and Laplace's equation, General procedure for solving Poisson's and Laplace's equation. Solution of problems.

Module – 4: Magneto-Static Fields

[5L]

Biot- savart law, Ampere's circuit law, Magnetic flux density, Magnetic static and Vector potential, Forces due to magnetic field, Magnetic torque and moments, Magnetization in material, Magnetic boundary condition, Inductor and Inductances, Magnetic energy, Force on magnetic material, Magnetic friction, Solution of problems

Module – 5: Electromagnetic Fields

[6L]

Faraday's law, Transformer and motional emf, Displacement current, Maxwell's equations, Solution of problems.

Module – 6: Electromagnetic Wave Propagation

[6L]

Wave equation, Wave equation in conducting medium, Wave propagation in lossy dielectric, Plane waves in loss less dielectric, Plane wave in free space, Plane wave in good and dielectric conductor, Skin effect,

Skin depth, Power & Poynting vector, Reflection of a plane wave at normal incidence, Idea of diffraction, Polarisation, Solution of problems .

Module – 7: Transmission Line

[3L]

Concept of lump & distributed parameters, Line parameters, Transmission line equation & solutions, Physical significance of solutions.

Text Books:

1. Elements of Electromagnetic, Mathew N.O. Sadiku, 4h edition, Oxford University press.
2. Engineering Electromagnetic, W.H. Hyat & J.A. Buck, 7th Edition, TMH

Paper Name: Thermal Power Engineering

Paper Code: ME (EE) 301

Contact: 2L: 0T: 0P

Credit: 2

Prerequisites: Engineering Thermodynamics & Fluid Mechanics (ME201).

Course Objective: To learn minute details of thermal power generation systems based Vapor Power and Gas power and their components, working principle for solving industrial problems.

Course Outcome: Upon successful completion of this course, the student will be able to

ME(EE) 301.1. Get detailed knowledge on the working principle of mountings and accessories of fire tube and water tube boilers.

- ME(EE) 301.2.** Understand draught systems and carry out heat balance of a power plant to evaluate efficiency.
- ME(EE) 301.3.** Analyze the working of steam nozzles and variety of turbines to carry out design based project works and solution of industrial problems
- ME(EE) 301.4.** Evaluate the performance of I.C Engines and Gas turbines.

Course Content

MODULE – I:

[9L]

Boilers – Its function, classification – Water tube and Fire tube boilers. Circulating principles – Natural and Forced circulation, Super critical boiler. Boiler accessories: Super heaters, Reheaters, Economiser, Air preheater. Boiler Performances analysis and heat balance, Draught Systems, Calculation of Chimney height.

MODULE – II:

[5L]

Basics of steam nozzle, Isentropic flow through nozzle, Mass of Steam discharged, choked flow and critical pressure ratio, Use of Mollier Diagram

MODULE – III:

[6L]

Steam turbines – Principle of operation, Classification, Optimum velocity ratio, Calculation of work and efficiency for Simple impulse turbine, Pressure & Velocity compounded impulse turbine, and Reaction Turbine, Turbine losses and Governing

MODULE – IV:

[6L]

IC Engines – classifications, working principle, valve timings, and Engine performance: engine power, efficiency, mean effective pressure, Testing of IC engine, heat balance, engine exhaust emission and control

MODULE – V:

[4L]

Gas Turbine–Closed and open cycle, efficiencies, Optimum pressure ratio, Use of regenerator, intercooling and reheating.

Paper Name: Analog and Digital Electronics Laboratory

Paper Code: EC (EE) 391

Contact: 0L: 0T: 3P

Credit: 2

Prerequisites: Knowledge in electrical circuits and electronic devices.

Course Outcome:

EC(EE) 391.1: Able to understand, analyse the analog circuits pertaining to applications like amplifier, oscillators and timer, interfacing digital circuits with ADC & DAC.

EC (EE) 391.2: Able to understand the fundamental concepts and techniques used in digital electronics.

EC (EE) 391.3: Examine the structure of various number systems, De- Morgan's law, Boolean algebra and its application in digital design.

EC (EE) 391.4: Analyse the analog circuits pertaining to applications like amplifier, oscillators and timer.

Course Content

1. Study of Ripple and Regulation characteristics of full wave rectifier with and without capacitor filter.
2. Study of Zener diode as voltage regulator.
3. Construction of two stages R-C coupled amplifier & study of its gain and Bandwidth.
4. Study of class A, C & Push pull amplifier.
5. Realizations V-I & I-V converter using Operational Amplifier.
6. Study of timer circuit using NE 555 and configuration of Monostable and Astable Multivibrator.
7. Study of DAC & ADC
8. Realisation of basic gates using Universal logic gates.
9. Realisation of RS-JK & D flipflop using logic gates.
10. Design of Combinational circuit for BCD to decimal conversion to drive 7-segment display using Multiplexer.
11. Realisation of Synchronous Up/Down counter.
12. Construction of simple Decoder & Multiplexer circuits using logic gates.
13. Construction of adder circuit using Shift register & Full adder.

Paper Name: Technical Report Writing and Language Practice**Paper Code: HU 381****Contact: 0L:0T:2P****Credit: 1**

Prerequisites: A basic knowledge of listening and speaking skills and the ability to infer meaning from audio- video/online lessons.

Course Outcome: By the end of the course the student should be able to

HU 381.1. Understand and make use of a wide taxonomy of listening skills & sub-skills for comprehending & interpreting data in English

HU 381.2. Speak in English, using appropriate vocabulary and pronunciation in contextualized situations

HU 381.3. Understand and put into effective practice the pragmatics of Group Discussion

HU 381.4. Understand and write a detailed technical report as per organizational needs

HU 381.5. Understand and interact in professional presentations and interviews

Course Content**Module 1: The Need for a Language Laboratory****[2L+2P]**

- Introduction to the Language Lab
- Skill-building exercises in the lab

Module 2: Power Listening**[2L+3P]**

- Taxonomy of Listening Skills & Sub-skills [Aural Skimming, Scanning, Listening for Details, Note taking, Evaluative Listening, Empathetic Listening, Paralinguistic and Kinesic Inferencing]
- Audio-based Lessons
- Repairing Listening 'Gaps' through Learner Feedback

Module 3: Speaking Skills**[2L+6P]**

- a) The Need for Speaking: Content and Situation-based speaking
- b) Speaking Activities: [Just a Minute, Paired Role Play, Situational Speaking Exercises]
- c) The Pragmatics of Speaking—Pronunciation practice and learner feedback.

Module 4: Group Discussion**[2L+6P]**

- a) Teaching GD Strategies
- b) In-house video viewing sessions
- c) Group Activities [Topic Brainstorming, Situational Analysis, Frame Story]
- d) Extended Practice and feedback

Module 5: Writing a Technical Report**[2L+6P]**

- a) Organizational Needs for Reports and types
- b) Report Formats
- c) Report Writing Practice Sessions and Workshops

Module 6: SWOT Analysis**[2L+3P]**

- a) SWOT Parameters
- b) Organizational SWOT
- c) Case Study

Module 7: Presentation**[2L+6P]**

- a) Teaching Presentation as a Skill
- b) Speaking Strategies and Skills
- c) Media and Means of Presentation
- d) Extended Practice and Feedback

Module 8: Personal Interview**[2L+3P]**

- a) Preparing for the Interview: Interview Basics, Dressing and Grooming, Q & A
- b) Mock Interview sessions and feedback

Paper Name: Physics – II

Paper Code: PH (EE) 401

Contact: 3L:0T:0P

Credit: 3

Prerequisites: Knowledge of Physics up to B. Tech. 1st year Physics – I course

Course Outcome: After completion of this course student will be able to

PH (EE) 401.1. Explain electron transport in metal-insulators and semiconductors using energy Band theory.

PH (EE) 401.2. Apply Schrödinger equation in variety of atomic scale problems including nanomaterials.

PH (EE) 401.3. Analyze the physics of various kinds of electric and magnetic materials

PH (EE) 401.4. Justify the importance of Fermi energy level in turning electronic properties of various materials

Course Content

Module 1: Electric and Magnetic properties of materials (8L)

Module 1.01: Insulating materials:

Dielectric Material: Concept of Polarization, the relation between D, E and P, Polarizability, Electronic (derivation of polarizability), Ionic, Orientation & Space charge polarization (no derivation), behavior of Dielectric under alternating field (qualitative discussion only), Local electric field at an atom: Lorentz field, Lorentz relation; Dielectric constant and polarizability – Clausius-Mossotti equation (with derivation) ; Dielectric losses. Ferro electric and piezo electrics (Qualitative study).

4L

Module 1.02: Magnetic materials and storage devices:

Magnetic Field & Magnetization M, relation between B, H, M. Bohr magneton, susceptibility, Diamagnetism-Paramagnetism - Curie law (qualitative discussion), Ferromagnetism– Curie Temperature, Weiss molecular field theory (qualitative) & Curie-Weiss law, concept of θ_p , Hysteresis, Hard ferromagnets, Comparison and applications of permanent magnets (storage devices) and Soft ferromagnets (Permalloys, Ferrites etc.)

4L

Module 2: Quantum Mechanics – II**(7L)**

Formulation of quantum mechanics and Basic postulates- superposition principle, orthogonality of wave function, expectation value; operator correspondence, Commutator. Measurements in Quantum Mechanics-Eigen value, Eigen function, Schrödinger's equation as energy eigen value equation.

4L

Application of Schrödinger equation – Particle in an infinite square well potential (1-D and 3-D potential well; Discussion on degenerate levels), 1D finite barrier problem and concept of quantum tunnelling (solve only $E < V_0$).

3L

Module 3: Statistical Mechanics**(6L)****Module 3.01: Basics of Statistical Mechanics:**

Concept of energy levels and energy states. Microstates, macrostates and thermodynamic probability, MB, BE, FD, statistics (Qualitative discussions)- physical significance, conception of bosons, fermions, classical limits of quantum statistics, Fermi distribution at zero & non-zero temperature, Concept of Fermi level.

4L

Module 3.02: Applications of Statistical Mechanics:

Qualitative study: Fermi level in metals, total energy at absolute zero and total number of particles. Fermi level for intrinsic and extrinsic semiconductors (pictorial representations on temperature dependence and doping concentration viz. p type, n-type).

2L

Module 4: Elements of solid state physics**(6L)****Module 4.01: Free electron theory (qualitative):**

Electronic conduction in solids : Drude's theory, Boltzmann equation, Wiedemann Frantz Law, Idea of quantization of energy-Sommerfeld theory.

3L

Module 4.02: Band theory of solids:

Bloch Theorem-statement only, Kronig-Penny model (qualitative treatment)- Energy-band (E-k) diagram, allowed and forbidden energy bands, Brillouin Zone (qualitative study), Concept of effective mass – electrons and holes, crystal momentum, Hall effect-applications.

3L

Module 5: Physics of Nanomaterials**(3L)**

Reduction of dimensionality, properties of nanomaterials, Quantum wells (two dimensional), Quantum wires (one dimensional), Quantum dots (zero dimensional); Quantum size effect and Quantum confinement. Carbon allotropes. Application of nanomaterials (CNT, graphene, electronic, environment, medical).

3L

Module 6: Nuclear energy as future energy**(3L)**

Nuclear Binding Energy, Liquid drop model, Concept of Nuclear Fission, Nuclear Fusion & Energy output, Nuclear Reactor.

3L

Paper Name: Electrical Machines I

Paper Code: EE 401

Contact: 3L:1T:0P

Credit: 4

Prerequisites: Concept of Basic Electrical Engineering and Field Theory

Course Outcome:

EE 401.1: Describe the concept of magnetic circuits.

EE 401.2: Demonstrate the operation of different types of dc machines and its applications.

EE 401.3: Understand the equivalent circuit of Transformers, D.C. Machines, and Three-Phase Induction Motor.

EE 401.4: Analyse the connections of transformers and its operations.

Course Content**MODULE – I: General introduction to Electrical Machines 6L**

Faraday's laws of electromagnetic induction, Fleming's rule and Lenz's Law.

1L

Electromagnetic energy conversion principle, singly and doubly excited magnetic system. Physical concept of torque production, electromagnetic and reluctance torque.

1L

Concept of General terms pertaining to Rotating Machines: Electrical & Mechanical degree, Pole pitch, Coil, Generated EMF in full pitched coil, Generated EMF in a short pitched coil, EMF polygon.

2L

Distribution factor, Pitch factor. MMF produced by Distributed Windings, MMF of a coil, MMF of single phase distributed Winding, MMF waveform of Commutator machines.

2L

MODULE – II: Single-Phase Transformers 6L

Core construction and different parts of transformer and their function, Materials used for core, winding and insulation, Transformer oil, Different types of cooling methods (in brief), Name plate rating.

1L

Equivalent circuit and per unit representation and its importance, Regulation, Efficiency and All day efficiency, Numerical.

3L

Single-phase Auto transformer – Comparison of weight, copper loss with 2- Winding transformer.

1L

Sumpner Test, Applications of 2-winding transformer & Auto transformer.

1L

MODULE – III: Three-Phase Transformers 11L

Types of three-phase transformer. Construction – Core type 3-limb, 5-limb and Shell type, Flux distribution, Different types of windings.

1L

Polarity of transformer, Vector groups for various connections.

2L

Parallel operation and load sharing, Numerical.

2L

Effect of unbalanced loading and neutral shifting, Harmonics production and its Suppression, Tertiary windings.

2L

Scott-connected transformer and open-delta connection – working principle, Connection diagram, practical application.

2L

Tap-changing methods, Tap changers – Off load and On-load type.

1L

Special Transformer: Pulse transformer, Grounding transformer.

1L

MODULE – IV: Three Phase Induction Motor

10L

Induction motor as a transformer, Power stages in 3-phase induction motor and their relation, power-slip characteristics, Losses, Efficiency, Numerical.

3L

Determination of equivalent circuit parameters, Separation of losses, Numerical.

2L

Effect of change in rotor resistance in slip-ring machine and slip power recovery.

1L

Concept of Deep bar and Double cage rotor.

1L

Starting and speed control of three phase induction motor.

1L

Space harmonics: Crawling and Cogging, Brief idea of braking of Induction Motor.

1L

Industrial applications of 3-phase induction motor.

1L

MODULE – V: D.C. Machine

7L

EMF generation in armature, Methods of building up of e.m.f, Significance of Critical resistance and Critical speed.

1L

Armature reaction and its effect, Function of Interpole and Compensating Winding.

1L

Commutation method, Concept of reactance voltage.

1L

Power flow diagram, Losses and efficiency, Numerical.

2L

Testing of dc machines – Hopkinson's, Swinburne's test, Brake test (Tests Specified as per standards).

1L

Amplidyne, Industrial applications of dc machine.

1L

Paper Name: Electrical and Electronics Measurement

Paper Code: EE402

Contact: 3L:0T:0P

Credit: 3

Prerequisites: Concepts of Basic Electrical Engineering.

Course Outcome:

EE402 .1: Understand the operating principles of electrical and electronic measuring instruments.

EE402 .2: Understand the functions of different Sensors and Transducers

EE402 .3: Identify and measure various physical parameters using appropriate measuring instruments.

EE402 .4: Application of Current Transformer and Potential transformer in Power System protection

Course Content

Module – I:

Measurements: (3)

Method of measurement, Measurement system, Classification of instruments, Definition of accuracy, Precision, Resolution, Speed of response, Errors in measurement.

Analog meters: (3)

General features, Construction, Principle of operation and torque equation of Moving coil and Moving iron, Electrodynamometer, Induction instruments, Electrostatic, Thermoelectric, Rectifier type instruments, Extension of instrument ranges and multipliers.

Galvanometer: (1)

Classification, Principle of operation, Advantage, Disadvantage, Error and Application.

Module – II:

Instrument Transformer: (3)

Disadvantage of shunt and multipliers, Advantage of Instrument transformers, Principle of operation of Current & Potential transformer, errors.

Measurement of Power: (3)

Principle of operation of Electrodynamometer & Induction type wattmeter. Wattmeter errors.

Measurement of Resistance: (3)

Measurement of medium, low and high resistances, Megger.

Module – III:

Measurement of Energy: (2)

Construction, theory and application of AC energy meter. Testing of energy meters.

Potentiometer: (3)

Principle of operation and application of Crompton's DC potentiometer, Polar and Co-ordinate type AC potentiometer. Application.

AC Bridges: (4)

Measurement of Inductance, Capacitance frequency

Measurement of power factor: (1)

Power Factor Meter, 1- ϕ & 3- ϕ dynamometer type power factor meter, 1- ϕ moving iron power factor meter.

Module – IV:

Cathode Ray Oscilloscope (CRO): (2)

Measurement of voltage, current, frequency & phase by oscilloscope. Frequency limitation of CRO. Sampling and storage oscilloscope, Double beam CRO.

Electronic Instruments:

(3)

Digital voltmeter(Electronic), Resolution and sensitivity of digital meters, Digital multimeter, Digital frequency meter.

Sensors & Transducers:

(4)

Introduction to sensors & Transducers, Strain gauge, LVDT, Temperature transducers, Flow measurement using magnetic flow measurement.

Text Books:

1. A course in Electrical & Electronic Measurements & Instrumentation, A.K. Sawhney, Dhanpat Rai & sons.
2. Electrical Measurement & Measuring Instruments, E.W. Golding & F.C. Wides, Wheeler Publishing.
3. Electronic Instruments, H.S. Kalsi, Tata Mc-Graw hill, 2nd Edition.

Paper Name: Numerical Methods

Paper Code: M (CS) 401

Contact: 3L: 0T: 0P

Credit: 3

Pre requisites: Concept of Calculus and Algebra.

Course Objective: The purpose of this course is to provide basic understanding of the derivation and the use of the numerical methods along with the knowledge of finite precision arithmetic.

Course Outcome: On successful completion of the learning sessions of the course, the learner will be able to

- M(CS) 401.1.** Recall the distinctive characteristics of various numerical techniques and the associated error measures.
- M(CS) 401.2.** Understand the theoretical workings of various numerical techniques and to solve the engineering problems.
- M(CS) 401.3.** Apply the principles of various numerical techniques to solve various problems.

Course Content

MODULE – I: Numerical Method I

Approximation in numerical computation: Truncation and rounding errors, Propagation of errors. Propagation of errors, Fixed and floating-point arithmetic. (2L)

Interpolation: Newton forward/backward interpolation, Stirling & Bessel's Interpolation formula, Lagrange's Interpolation, Divided difference and Newton's divided difference Interpolation. (7L)

Numerical integration: Newton Cotes formula, Trapezoidal rule, Simpson's 1/3 rule, Weddle's Rule, Romberg Integration, Expression for corresponding error terms. (5L)

Numerical solution of a system of linear equations: Gauss elimination method, Tridiagonal matrix algorithm, LU Factorization method, Gauss-Seidel iterative method, Successive over Relaxation (SOR) method. (6L)

MODULE – II: Numerical Method II

Solution of polynomial and transcendental equations: Bisection method, Regula-Falsi, Secant Method, Newton-Raphson method. (5L)

Numerical solution of ordinary differential equation: Taylor series method, Euler's method, Euler's modified method, fourth order Runge-Kutta method and Milne's Predictor-Corrector methods. (6L)

Numerical solution of partial differential equation: Finite Difference method, Crank– Nicolson method. (2L)

Paper Name: Data Structure**Paper Code: CS (EE) 402****Contact: 3L: 0T: 0P****Credit: 3****Prerequisites:**

1. Familiarity with the fundamentals of C or other programming language.
2. A solid background in mathematics, including probability, set theory.

Course Outcome: On completion of the course students will be able to**CS (EE) 402. 1:** Differentiate how the choices of data structure and algorithm methods impact the performance of program.**CS (EE) 402. 2:** Solve problems based upon different data structure and also write programs.**CS (EE) 402. 3:** Identify appropriate data structure and algorithmic methods in solving problem.**CS (EE) 402. 4:** Discuss the computational efficiency of the principal algorithms for sorting, searching, and hashing.**CS (EE) 402. 5:** Compare and contrast the benefits of dynamic and static data structures implementations**Course Content****Module I: Linear Data Structure****Introduction:****[10L]****(2L)**

Concepts of data structures: a) Data and data structure b) Abstract Data Type and Data Type. Algorithms and programs, basic idea of pseudo-code (1L)

Algorithm efficiency and analysis, time and space analysis of algorithms – order notations (1L)

Array: (2L)

Different representations – row major, column major (1L)

Sparse matrix - its implementation and usage, Array representation of polynomials (1L)

Linked List: (6L)

Singly linked list – operations, Doubly linked list – operations (4L)

Circular linked list – operations, Linked list representation of polynomial and applications (2L)

Module II: Linear Data Structure [6L]

Stack and Queue: (4L)

Stack and its implementations (using array and linked list) (1L)

Applications (infix to Postfix, Postfix Evaluation) (1L)

Queue, circular queue de-queue (1L)

Implementation of queue- linear and circular (using array and linked list) (1L)

Recursion: (2L)

Principles of recursion - use of stack, tail recursion. (1L)

Applications - The Tower of Hanoi, Eight Queens Puzzle (1L)

Module III: Nonlinear Data structures [12L]

Trees: (8L)

Basic terminologies, forest, tree representation (using array and linked list) (1L)

Binary trees - binary tree traversal (pre-, in-, post- order) (1L)

Threaded binary tree (1L)

Binary search tree- operations (creation, insertion, deletion, searching) (1L)

Concept of Max-Heap and Min-Heap (creation, deletion) (1L)

Height balanced binary tree – AVL tree (insertion with examples only) (1L)

Height balanced binary tree – AVL tree (deletion with examples only) (1L)

m –Way Search Tree, B+ Tree – operations (insertion, deletion with examples only) (1L)

Graphs: (4L)

Graph theory review (1L)

Graph traversal and connectivity – Depth-first search (DFS), Breadth-first search (BFS) - concepts of edges used in DFS and BFS (tree-edge, back-edge, cross-edge, and forward-edge) (2L)

Minimal spanning tree – Prim’s algorithm, Kruskal’s algorithm (basic idea of greedy methods) (1L)

Module IV: Searching, Sorting [8L]

Sorting Algorithms: (4L)

Bubble sort, Insertion sort, Selection sort – with notion of complexity (1L)

Quick sort, Merge sort – with complexity (2L)

Radix sort – with complexity (1L)

Searching: (2L)

Sequential search – with complexity (1L)

Binary search, Interpolation Search– with complexity (1L)

Hashing: (2L)

Introduction to Hashing and Hashing functions
Collision resolution techniques

(1L)

(1L)

Paper Name: Physics – II Laboratory**Paper Code: PH (EE) 491****Contact: 0L: 0T: 3P****Credit: 2****Prerequisites:** Knowledge of Physics up B. Tech. 1st year Physics-I course**Course Outcome:****At the end of the course students’ will be able to****PH 491.1:** Demonstrate experiments allied to their theoretical concepts**PH 491.2:** Conduct experiments using semiconductors , dielectric and ferroelectrics

PH 491.3: Classify various types of magnetic materials

PH 491.4: Participate as an individual, and as a member or leader in groups in laboratory sessions actively

PH 491.5: Analyze experimental data from graphical representations, and to communicate effectively them in Laboratory reports including innovative experiments

Course Content

Module 1: Electric and Magnetic properties of materials

(8L)

1. Study of dipolar magnetic field behavior.
2. Study of hysteresis curve of a ferromagnetic material using CRO.
3. Use of paramagnetic resonance and determination of Lande-g factor using ESR setup. Measurement of Curie temperature of the given sample.
4. Determination of dielectric constant of given sample (frequency dependent)/Measurement of losses in a dielectric using LCR circuits.

Module 2: Quantum Mechanics – II

(6L)

1. Determination of Stefan's radiation constant.
2. To study current-voltage characteristics, load response, areal characteristics and spectral response of photo voltaic solar cells & measurement of maximum workable power.
3. Measurement of specific charge of electron using CRT.

Module 3: Solid state physics

(9L)

1. Determination of band gap of a semiconductor.
2. Determination of Hall co-efficient of a semiconductor and measurement of Magnetoresistance of a given semiconductor

*****In addition to regular 7 experiments it is recommended that each student should carry out at least one experiment beyond the syllabus/one experiment as Innovative experiment.***

Probable experiments beyond the syllabus:

1. Determination of thermal conductivity of a bad conductor by Lees and Chorlton's method. Determination of thermal conductivity of a good conductor by Searle's method.
2. Study of I-V characteristics of a LED. Study of I-V characteristics of a LDR
3. Study of transducer property: Determination of the thermo-electric power at a certain temperature of the given thermocouple.

Paper Name: Electrical Machines – I Laboratory

Paper Code: EE 491

Contact: 0L: 0T: 3P

Credit: 2

Prerequisites: Concepts of Electrical Machines.

Course Outcome:

After successful completion of this course, student will be able to

EE 491.1: Conduct different tests on Transformers, D.C. Machines, Three-Phase Induction Motor.

EE 491.2: Analyze the characteristics of Transformers, D.C. Machines, Three-Phase Induction Motor.

Course Content

List of Experiments:

At least ten experiments to be performed

1. Heat-run test of a single-phase transformer.
2. Regulation and Efficiency of single-phase transformer by direct loading method.
3. Parallel operation of two single-phase transformer and find out the load sharing between them.
4. Efficiency of a single-phase transformer by Back-to-Back test.
5. Polarity test and vector grouping of a three-phase transformer.
6. Swinburne test of a D.C. shunt motor.
7. Brake test of D.C. series motor
8. Voltage build-up of a D.C. shunt generator and find out critical resistance and critical speed.
9. Circle diagram of a three-phase Induction Motor.
10. Speed control of three-phase Induction Motor by V/f constant.
11. Separation of losses in three-phase Induction Motor.
12. Load test of a three-phase wound rotor Induction Motor.

Paper Name: Electrical and Electronics Measurement Laboratory

Paper Code: EE 492

Contact: 0L: 0T: 3P

Credit: 2

Prerequisites: Concepts of different measuring system.

Course Objective: Familiarization with different electrical measuring system

Course Outcome:

492.1: Understand the operations of instrument transformers, bridges and different types analog and digital instruments

492.2: Apply knowledge to conduct experiment to measure of Resistance, Inductance, Capacitance, Power and Energy.

492.3: Interpreting the process of calibration and standardization of the instruments

492.4: Experiment of applications of instrument transformers in power system.

Course Content

1. Instrument workshop – Observe the construction of PMMC, Dynamometer, Electro-thermal and Rectifier type of instruments, Oscilloscope and Digital multimeter.
2. Calibrate moving iron and electro-dynamometer type ammeter/voltmeter by potentiometer.
3. Calibrate dynamometer type wattmeter by potentiometer.
4. Calibrate AC energy meter.
5. Application of Kelvin double bridge by using D' Arsonval Galvanometer.
6. Measurement of power using Instrument transformer.
7. Measurement of power in Polyphase circuits.
8. Measurement of frequency by Wien Bridge.
9. Measurement of Inductance by Anderson bridge
10. Measurement of capacitance by De Sauty Bridge.
11. Measurement of capacitance by Schering Bridge.
12. Testing of Energy Meter
13. Calibration of Electronic Volt meter
14. F/V and V/F converter application

Paper Name: Numerical Methods Laboratory**Paper Code: M (CS) 491****Contact: 0L: 0T: 2P****Credit: 1****Prerequisite:** Any introductory course on C/ Matlab.**Course Objective:** The purpose of this course is to provide basic programming skills for solving the problems in numerical methods.**Course Outcome:** On successful completion of the learning sessions of the course, the learner will be able to

- M(CS) 491.1.** Apply the programming skills to solve the problems using multiple numerical approaches.
- M(CS) 491.2.** Analyze if the results are reasonable, and then interpret and clearly communicate the results.

Course Content

1. Assignments on Newton forward /backward, Lagrange's interpolation, Sterling & Bessel's Interpolation formula, Newton's divided difference Interpolation.
2. Assignments on numerical integration using Trapezoidal rule, Simpson's 1/3 rule, Weddle's rule and Romberg Integration.
3. Assignments on numerical solution of a system of linear equations using Gauss elimination, Tridiagonal matrix algorithm, Gauss-Seidel iterations. Successive over Relaxation (SOR) method, LU Factorization method.
4. Assignments on numerical solution of Algebraic Equation by Bisection method, Regula-Falsi method, Secant Method, Newton-Raphson method
5. Assignments on ordinary differential equation: Euler's method, Euler's modified method, Runge-Kutta methods, Taylor series method and Predictor-Corrector method.
6. Assignments on numerical solution of partial differential equation: Finite Difference method, Crank–Nicolson method.
7. Implementation of numerical methods on computer through C/C++ and commercial Software Packages: Matlab / Scilab / Labview / Mathematica/NAG (Numerical Algorithms Group/Python).

Paper Name: Data Structure Laboratory

Paper Code: CS (EE) 492

Contact: 0L: 0T: 2P

Credit: 1

Prerequisites: Familiarity with the fundamentals of C or other programming language. A solid background in mathematics, including probability, set theory.

Course Outcomes: After successful completion of this course, student will be able to

CS (EE) 492.1. Choose appropriate data structure as applied to specified problem definition.

CS (EE) 492.2. Handle operations like searching, insertion, deletion, traversing mechanism on various data structures.

CS (EE) 492.3. Have practical knowledge on the applications of data structures.

CS (EE) 492.4. Store, manipulate and arrange data in an efficient manner.

CS (EE) 492.5. Implement queue and stack using arrays and linked list. Implementation of queue, binary tree and binary search tree.

Course Content

Module 1:

1. Write a C program that uses functions to perform the following:
 - a) Create a singly linked list of integers.
 - b) Delete a given integer from the above linked list. Display the contents of the above list after deletion.
2. Write a C program that uses functions to perform the following:
 - a) Create a doubly linked list of integers.
 - b) Delete a given integer from the above doubly linked list. Display the contents of the above list after deletion.
3. Write a C program to implement Polynomial addition and Polynomial multiplication using Linked List.
4. Write a C program that uses stack operations to convert a given infix expression into its postfix Equivalent, Implement the stack using an array.
5. Write C programs to implement a queue ADT using i) array and ii) doubly linked list respectively.

Module 2:

6. Write a C program that uses functions to perform the following:
 - a) Create a binary search tree of characters.
 - b) Traverse the above Binary search tree recursively in Postorder.
7. Write a C program that uses functions to perform the following:
 - a) Create a binary search tree of integers.
 - b) Traverse the above Binary search tree non recursively in inorder.

Module 3:

8. Write C programs for implementing the following sorting methods to arrange a list of integers in ascending order:
 - a) Insertion sort
 - b) Merge sort
9. Write C programs for implementing the following sorting methods to arrange a list of integers in ascending order:
 - a) Quick sort
 - b) Selection sort
10. Write C programs for implementing the following searching methods:
 - a) Linear Search
 - b) Binary Search
11. Write a C program to implement all the functions of a dictionary (ADT) using hashing.

Module 4:

12. Write C programs for implementing the following graph traversal algorithms:
 - a) Depth first search
 - b) Breadth first search

Text Books:

Paper Name: Technical skill Development

Paper Code: MC 481

Contact: 0L: 0T: 2P

Credit: 2 Units

Prerequisites: Knowledge of electrical circuit and component.

Course Outcome: On completion of the course students will be able to

MC 481.1. Prepare lists of material for a mini project.

MC 481.2. Design an electric circuit as per the requirement of application.

Course Content

1. Voltage regulator for household appliances.
2. Solar Mobile Charger.
3. Electric field Detector
4. Power Bank
5. Level control mechanism.
6. Op-amp trainer kit
7. Modern dielectric power plant
8. Power Generation by wind mill
9. Smoke detector/Clap switch.

Paper Name: Environmental Science

Paper Code: HU 501

Contact: 2L: 0T: 0P

Credit: 2

Prerequisites: Qualified B.Tech 1st year

Course Objective:

1. Be able to understand the natural environment and its relationships with human activities.
2. Be able to apply the fundamental knowledge of science and engineering to assess environmental and health risk.
3. Be able to understand environmental laws and regulations to develop guidelines and procedures for health and safety issues.
4. Be able to solve scientific problem-solving related to air, water, noise & land pollution.

Course Outcomes (COs):

On successful completion of the learning sessions of the course, the learner will be able to:

HU501.1: To understand the natural environment and its relationships with human activities.

HU501.2: To apply the fundamental knowledge of science and engineering to assess environmental and health risk.

HU501.3: To develop guidelines and procedures for health and safety issues obeying the environmental laws and regulations.

HU501.4: Acquire skills for scientific problem-solving related to air, water, noise & land pollution.

Course Content

Module – 1: General

6L

- 1.1. Natural Resources: Forest Resource, water resource, mineral resource, energy resources: alternative source of energy

- 1.2. Population Growth: Exponential Growth, logistic growth, Maximum sustainable yield, demography
- 1.3. Disaster Management: Types of disasters (Natural & Man-made), Floods, Earthquake, Tsunamis, Cyclones, landslides (cause, effect & control)
- 1.4. Ecology & Ecosystem: Elements of ecology, definition of ecosystem- components types and function, Food chain & Food web, Structure and function of the following ecosystem: Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems
- 1.5. Environmental Management: Environmental impact assessment, Environmental laws and protection act of India(The Environment protection Act, Air pollution Act, Water Act, Wildlife Protection Act) , Hazardous waste(management and Handling) Rules.

Module – 2: Air Pollution and Control

7L

- 2.1. Sources of Pollutants: point sources, nonpoint sources and manmade sources primary & secondary pollutant
- 2.2. Types of air pollutants: primary & secondary pollutant ; Suspended particulate matter, oxides of carbon, oxides of nitrogen, oxides of sulphur, particulate, PAN, Smog (Photochemical smog and London smog),
- 2.3. Effects on human health & climate: Greenhouse effect, Global Warming, Acid rain, Ozone Layer Depletion
- 2.4. Air pollution and meteorology: Ambient Lapse Rate, Adiabatic Lapse Rate, Atmospheric stability & Temperature inversion
- 2.5. control of air pollution (ESP, cyclone separator, bag house, catalytic converter, scrubber (ventury)).

Module – 3: Water Pollution

7L

- 3.1. Classification of water (Ground & surface water)
- 3.2. Pollutants of water, their origin and effects: Oxygen demanding wastes, pathogens, nutrients, Salts, heavy metals, pesticides, volatile organic compounds.
- 3.3. Surface water quality parameters: pH, DO, 5 day BOD test, BOD reaction rate constants, COD. Numerical related to BOD
- 3.4. Lake: Eutrophication [Definition, source and effect].
- 3.5. Ground water: Aquifers, hydraulic gradient, ground water flow (Definition only), ground water pollution (Arsenic & Fluoride; sources, effects, control)
- 3.6. Quality of Boiler fed water: DO, hardness, alkalinity, TDS and Chloride
- 3.7. Layout of waste water treatment plant (scheme only).

Module – 4: Land Pollution

2L

- 4.1. Types of Solid Waste: Municipal, industrial, commercial, agricultural, domestic, hazardous solid wastes (bio-medical), E-waste
- 4.2. Solid waste disposal method: Open dumping, Land filling, incineration, composting, recycling (Advantages and disadvantages).
- 4.3. Waste management: waste classification, waste segregation, treatment & disposal

Module – 5: Noise Pollution

2L

- 5.1. Definition of noise, effect of noise pollution on human health,

- 5.2. Average Noise level of some common noise sources
- 5.3. Definition of noise frequency, noise pressure, noise intensity, noise threshold limit value, equivalent noise level, L10 (18 hr Index) .
- 5.4. Noise pollution control.

Paper Name: Electric Machine – II**Paper Code: EE501****Contact: 3L: 1T: 0P****Credit: 4****Prerequisites:** Concept of Basic Electrical Engineering and Field Theory.**Course Objective:**

1. Provide knowledge to select the electrical machine for particular machine.

2. Study the performance and troubleshoot the operation of synchronous machine and fractional kW motors.

Course Outcomes (COs):

On successful completion of the learning sessions of the course, the learner will be able to:

EE501.1. Describe the concept of rotating magnetic fields.

EE501.2. Demonstrate the operation of AC Machines.

EE501.3. Understand the principle of operation and know performance of synchronous machine and fractional kW motors.

EE501.4 Analyse performance characteristics of ac machines.

Course Content

MODULE – I: Synchronous Machines

23L

Construction of 3-phase Synchronous Machines, Description of salient & non-salient rotor, Advantages of Stationary armature and Rotating field system, Name plate rating. 2L

Methods of excitation systems: Static excitation, Brushless excitation, DC generator. 1L

Armature reaction at various p.f, concept of Synchronous reactance. 2L

Phasor diagrams of alternator at lagging, leading and unity p.f. loads. 1L

Voltage regulation of alternator by synchronous impedance method, Numericals. 2L

Open circuit characteristics, Short circuit characteristics of alternator and determination of synchronous reactance. 1L

Theory for salient pole machine, Two reaction theory, phasor diagram at different loads. 2L

Power angle characteristics of Synchronous machines, Numericals. 2L

Short circuit ratio (SCR) – concept and significance. 1L

Method of control of Active & Reactive Power of an alternator. 1L

Reasons and advantages of Parallel operation. 1L

Synchronization of two or more alternators: Three lamps method, Synchroscope. 1L

Parallel operation of (i) an alternator and infinite bus and (ii) Between two alternators and Load sharing between them.Numericals. 2L

Methods of starting of Three-Phase Synchronous Motor: by auxiliary motor and Damper winding. 1L

Effect of variation of excitation at infinite bus (over and under excitation) – V curves and inverted V-curves. 1L

Hunting and its prevention. 1L

Applications of synchronous motor, Synchronous condenser. 1L

MODULE – II: Single-Phase Induction Motor**12L**

| | |
|---------------------------------------------------------------------------------------------------------------------------|----|
| Construction, Concept of Pulsating Torque. | 1L |
| Double-revolving field theory and Cross-Field Theory. | 2L |
| Development of equivalent circuit, Determination of equivalent circuit parameters, Numericals. | 2L |
| Methods of starting using auxiliary winding, Selection of capacitor value during starting and running, Numericals. | 2L |
| Speed-Torque characteristics, Phasor diagram, Condition of Maximum torque. | 2L |
| Constructional features and performance characteristics of Universal Series Motors, Compensated and uncompensated motors. | 2L |
| Testing of Single phase motors and Applications. | 1L |

MODULE – III: Special Machines**5L**

| | |
|---------------------------------------------------------------------------------------------------------------------------------------------|----|
| Principle and construction of switched Reluctance motor, Permanent magnet machines, Brushless DC machines, Hysteresis motor, Stepper Motor. | 3L |
| Construction and Operational characteristics of Induction generator and Linear Induction motor. | 2L |

Paper Name: Power Systems – I

Paper Code: EE502

Contact: 3L:1T:0P

Credit: 4

Prerequisites: Concepts of Basic Electrical Engineering, Circuit Theory and Electrical Machine.

Course Objective:

1. To teach and learn basic structure of power system networks and generation of power.
2. To teach and learn of different power system components and stability analysis.

Course Outcome:

EE502.1: Illustrate the concepts of power system components and its associated terms.

EE502.2: Classify different types of power generation.

EE502.3: Interpreting mechanical and electrical design of overhead transmission lines.

EE502.4: Analyze performances of power system.

Course Content

Module – 1: Basic Concept of Electrical Supply System

2L

Structure of Power system, basic idea of transmission, distribution, tie lines, Grid networks etc.

Module – 2: Generation of Electric Power

6L

General layout of a typical coal fired power station, Hydroelectric power station, and Nuclear power station, their components and working principles, comparison of different methods of power generation, Introduction to Solar & Wind energy system.

Module – 3: Mechanical Design of Overhead Transmission Line

6L

Design of Conductors, Line supports:- Towers, Poles, Insulators: Types, Voltage distribution across a suspension insulator string, String efficiency, Arching shield & rings, Methods of improving voltage distribution across Insulator strings, Electrical tests on line Insulators Sag, Tension and Clearance, Effect of Wind and Ice on Sag, Stringing Chart Dampers.

Module – 4: Electrical Design of Overhead Transmission Line**8L**

Choice of frequency, Choice of voltage, Types of conductors, Inductance and Capacitance of a single phase and three phases' symmetrical and unsymmetrical configurations. Bundle conductors. Transposition. Concept of GMD and GMR. Influence of Earth on conductor capacitance.

Module – 5: Corona**4L**

Principle of Corona formation, Critical disruptive voltage, Visual critical corona discharge potential, Corona loss, advantages & disadvantages of Corona. Methods of reduction of Corona.

Module – 6: Cables**4L**

Types of cables, cable components, capacitance of single core & 3 core cables, dielectric stress, optimum cable thickness, grading, dielectric loss and loss angle.

Module – 7: Performance of Lines**8L**

Short, medium (nominal, T) and long lines and their representation. A.B.C.D constants, Voltage regulation, Ferranti effect, Power equations and line compensation, Power Circle diagrams.

Module – 8: Tariff**2L**

Introduction of Economics of power. Guiding principle of Tariff, different types of tariff. Indian Electricity Rule-1956 & 2003: General Introduction

Text Books:

1. Electrical Power System, Subir Roy, Prentice Hall
2. Power System Engineering, Nagrath & Kothery, TMH
3. Elements of Power System Analysis, C.L. Wadhwa, New Age International.

Paper Name: Control Systems – I

Paper Code: EE 503

Contact: 3L:1T:0P

Credit: 4

Prerequisites: Concept of Basic Electrical Engineering, Circuit Theory and Engineering Mathematics.

Course Objective: Find the utility to understand the concept of advance control system.

Course Outcome:

On completion of this course, students will be capable of

EE503.1: Get knowledge of basic structure of control systems, define basic terminologies, components.

EE503.2: Modelling physical systems using transfer function to analyze system dynamic and steady state behaviour.

EE503.3: Design compensators in frequency domain and understand the concept of feedback system and controllers.

Course Content

Module – 1: Introduction to Control System

[2]

Concept of feedback and Automatic control, Types and examples of feedback control systems, Definition of transfer function. Poles and Zeroes of a transfer function.

Module – 2: Mathematical Modeling of Dynamic Systems

[6]

Writing differential equations and determining transfer function of model of various physical systems including -Translational & Rotational mechanical systems, Basic Electrical systems & transfer function ,

Liquid level systems, Electrical analogy of Spring–Mass- Dashpot system. Block diagram representation of control systems. Block diagram algebra. Signal flow graph. Mason’s gain formula.

Module – 3: Control System Components

[2]

Potentiometer, Synchros, Resolvers, Position encoders. DC and AC tachogenerators. Actuators.

Module – 4: Time Domain Analysis

[8]

Time domain analysis of a standard second order closed loop system. Determination of time-domain specifications of systems. Step and Impulse response of first and second order systems. Stability by pole location. Routh-Hurwitz criteria and applications. Control Actions: Basic concepts of PI, PD and PID control, Steady-state error and error constants.

Module – 5: Stability Analysis by Root Locus Method

[4]

Root locus techniques, construction of Root Loci for simple systems. Effects of gain on the movement of Pole and Zeros.

Module – 6: Frequency Domain Analysis of Linear System

[8]

Bode plots, Polar plots, Nichols chart, Concept of resonance frequency of peak magnification. Nyquist criteria and Nyquist plots, measure of relative stability, phase and gain margin. Determination of margins in Bode plot.

Module – 6: Control System Performance

[4]

Improvement of system performance through compensation. Lead, Lag and Lead-lag compensation.

Module – 7: Control System Performance

[4]

Case-studies: Block diagram level description of feedback control systems for position control, speed control of DC motors, temperature control, liquid level control, voltage control of an Alternator.

Numerical problems to be solved in the tutorial classes.

Paper Name: Microprocessor and Microcontroller**Paper Code: EE 504****Contact: 3L:0T:0P****Credits: 3****Prerequisites:** Knowledge in Digital Electronics.**Course Objective:** To develop an in-depth understanding of the operation of microprocessors and microcontrollers, machine language programming & interfacing techniques.**Course Outcome:**

On completion of this course, students will be capable of

EE504.1: Remember the architecture, instructions, timing diagrams, addressing modes, memory interfacing, interrupts, data communication of 8085.**EE504.2:** Remember the 8086 microprocessor-Architecture, Pin details, memory segmentation, addressing modes, basic instructions, interrupts..**EE504.3:** Recognize 8051 micro controller hardware, input/output pins, ports, external memory, counters and timers, instruction set, addressing modes, serial data i/o, interrupts.**EE504.4:** Apply instructions for assembly language programs of 8085, 8086 and 8051.**Course Content****Module – 1: 8085 Microprocessor****12L**

Introduction to Microcomputer based system, Evolution of Microprocessor and microcontrollers and their advantages and disadvantages, Architecture of 8085 Microprocessor, Address / Data Bus multiplexing and demultiplexing, Status and Control signal generation, Instruction set of 8085 Microprocessor, Classification of instructions, addressing modes, timing diagram of the instructions, Memory interfacing, IO interfacing, ADC / DAC interfacing, Stack and Subroutine, Delay Calculation, Interrupts of 8085 processor, classification of interrupts, Serial and parallel data transfer – Basic concept of serial I/O, DMA, Asynchronous and synchronous serial transmission using SID and SOD pins of 8085.

Module – 2: Assembly Language Programming with 8085

2L

Addition, Subtraction, Multiplication, Block Transfer, Ascending order, Descending order, Finding largest & smallest number, Look-up table etc. Programming using interrupts (programming using INTR is not required).

Module – 3: 8086 Microprocessor

5L

8086 Architecture, Pin details, memory segmentation, addressing modes, Familiarization of basic Instructions, Interrupts, Memory interfacing, ADC / DAC interfacing.

Module – 4: Assembly Language Programming with 8086

2L

Addition, Subtraction, Multiplication, Block Transfer, Ascending order, Descending order, Finding largest & smallest number etc.

Module – 5: 8051 Microcontroller

4L

8051 architecture, hardware, input/output pins, ports, internal and external memory, counters and timers, instruction set, addressing modes, serial data i/o, interrupts, Memory interfacing, ADC / DAC interfacing.

Module – 6: Assembly Language Programming using 8051

3L

Moving data: External data moves, code memory read only data moves, PUSH and POP opcodes, data exchanges; Logical operations: Byte-level, bit-level, rotate and swap operations; Arithmetic operations: Flags, incrementing and decrementing, addition, subtraction, multiplication and division, decimal arithmetic; Jump and call instructions: Jump and call program range, jumps, calls and subroutines, interrupts and returns.

Module – 7: Support IC Chips

6L

8255, 8253 and 8251: Block Diagram, Pin Details, Modes of operation, control word(s) format. Interfacing of support IC chips with 8085, 8086 and 8051.

Module 8: Brief introduction to PIC microcontroller (16F877)

1L

Architecture, PIN details, memory layout.

Text Books:

1. Microprocessor architecture, programming and application with 8085 – R. Gaonkar, Penram International
2. The 8051 microcontroller - K. Ayala, Thomson
3. Microprocessors & interfacing – D. V. Hall, Tata McGraw-hill

4. Ray & Bhurchandi, Advanced Microprocessors & Peripherals, TMH
5. The 8051 microcontroller and Embedded systems - Mazidi, Mazidi and McKinley, Pearson An Introduction to Microprocessor and Applications –Krishna Kant,Macmillan

Paper Name: Electric Machine – II Laboratory**Paper Code: EE591****Contact: 0L: 0T: 3P****Credit: 2****Prerequisites:** Concepts of Electrical Machine.

Course Objective: Provide knowledge to select the fractional kW motors for particular machine. Study the performance of synchronous machine.

Course Outcomes:

After successful completion of this course, student will be able to

EE591.1. Perform different tests on Three-Phase A.C. Generators, Synchronous Motors and Single-Phase Induction Motor.

EE591.2. Interpret the observed result using theoretical knowledge and hence calculate unknown parameters.

Course Content

List of Experiments:

1. To observe the effect of excitation and speed on induced e.m.f of a 3-phase alternator and plot the O.C.C. of the alternator.
2. Determination of regulation of Synchronous machine by
 - a) Potier reactance method.
 - b) Synchronous Impedance method
3. To determine the direct axis resistance [X_d] and quadrature reactance [X_q] of a 3-phase synchronous machine by slip test.
4. Parallel operation of 3 phase Synchronous generators.
5. V-curve of Synchronous motor.
6. Determination of equivalent circuit parameters of a single phase Induction motor.
7. Load test on single phase Induction motor to obtain the performance characteristics.
8. To study the performance of Induction generator.
9. To study the effect of capacitor on the starting and running condition of a single-phase Induction motor, and to determine the method of reversing the direction of rotation.

Paper Name: Power Systems – I Laboratory

Paper Code: EE 592

Contact: 0L:0T:3P

Credit: 2

Prerequisites: Concept of Power System.

Course Objective: To allow student to practically verify several concepts and procedures learn in power system modelling and analysis.

EE592.1. Estimate performance of Transmission Line and Distribution line.

EE592.2. Select line support for a particular Transmission Line.

EE592.3. Explain methods of active and reactive power control.

EE592.4. Test the reliability of different components of Transmission Line and Distribution Line.

Course Content

1. Draw the Schematic diagram of structure of power system and power transmission line and Symbol of Electrical Equipments.
2. Simulation of DC distribution by network analyzer.
3. Measurement of earth resistance by earth tester.
4. Dielectric strength test of insulating oil, solid Insulating Material.
5. Different parameter calculation by power circle diagram
6. Study of different types of insulator.
7. Determination of the generalized constants A,B, C, D of long transmission line.
8. Active and reactive power control of alternator.
9. Study and analysis of an electrical transmission line circuit with the help of software.
10. Dielectric constant, tan delta, resistivity test of transformer oil.
11. Any Innovative experiment according to knowledge of Power Systems– I.

Paper Code: EE 593

Contact: 0L:0T:3P

Credit: 2

Prerequisite: Concept of Simulation Software and control system.

Course Objective: Provide knowledge of basics of control system and learning of different systems with their stability analysis.

Course Outcomes: After successful completion of this course, student will be able to

EE593.1: Simulate system behaviour using software simulator.

EE593.2: Analyze system behaviour using software simulator/hardware

EE593.3: Design compensators, controllers to meet desired performance of system.

Course Content

1. Familiarization with MAT-Lab control system tool box, MAT-Lab- simulink tool box & PSPICE
2. Determination of Step response for first order & Second order system with unity feedback on CRO & calculation of control system specification like Time constant, % peak overshoot, settling time etc. from the response.
3. Simulation of Step response & Impulse response for type-0, type-1 & Type-2 system with unity feedback using MATLAB & PSPICE.
4. Determination of Root locus, Bode plot, Nyquist plot using MATLAB control system tool box for 2nd order system & determination of different control system specification from the plot.
5. Determination of PI, PD and PID controller action of first order simulated process.
6. Determination of approximate transfer functions experimentally from Bode plot.
7. Evaluation of steady state error, setting time, percentage peak overshoot, gain margin, phase margin with addition of Lead

Paper Name: Microprocessor and Microcontroller Laboratory

Paper Code: EE 594

Contact: 0L:0T:3P

Credits: 2

Prerequisites: Knowledge in Digital Electronics

Course Objective: To apply ALP Programming for arithmetic-logical solutions and also to interpret the interfacing programming by conducting experiments.

Course Outcome:

EE594.1. Apply arithmetic and Logical operations, using assembly language programming in 8085 & 8086 Trainer Kits.

EE594.2. Apply arithmetic, logical and bit manipulation instructions in programming of 8051.

EE594.3. Correlate interfacing technique of 8255 Trainer kit with 8085 & 8086 through Subroutine Call and IN/OUT instructions like glowing LEDs accordingly, to control stepper motor rotation, interfacing Seven Segment Display and to display a string etc.

EE594.4. Illustrate Timer/Counter and Interrupt handling in 8051.

Course Content

1. Familiarization with 8085 register level architecture, the basic instruction sets (data transfer, arithmetic, logical, branching) and the trainer kit components including the memory map.
2. Familiarization with the process of storing, executing and viewing the contents of memory as well as registers in the trainer kit 8085 and simulator through small assignments.
3. Programming using 8085 kit and simulator for:
Addition, Subtraction, Multiplication by repeated addition method, Square, Complement, Look up table, Copying a block of memory, Shifting, Packing and unpacking of BCD numbers, Addition of BCD numbers, Binary to ASCII conversion, Smallest and Largest number from an array of numbers, Ascending order, Descending Order, String Matching, Multiplication using shift and add method.

4. Program using subroutine calls and IN/OUT instructions using 8255 PPI on the trainer kit e.g. subroutine for delay, reading switch state and glowing LEDs accordingly, glowing of seven segment display.
5. Program for serial communication between two trainer kits.
6. Interfacing of 8255: Keyboard, Stepper motor rotation.
7. Study of 8051 Micro controller kit and writing programs.

Paper Name: Electrical System Design – I**Paper Code: EE 581****Contact: 0L:1T:3P****Credits: 2****Prerequisites:** Knowledge of applications of Electrical Circuit, devices and machines**Course Objective:** To develop confidence in young professionals in electrical system design.**Course Outcome:****EE 581.1.** Able to design Electrical Systems.**EE 581.2.** Able to develop an idea of preparing bill of materials for a particular design.**Course Content****List of Experiments:**

1. Familiarization of synchronous machine, single phase and three phase induction machine, DC machine, single phase and three phase transformers with the help of cut section models.
2. Design and fabrication of air and iron cored inductor.
3. Designing a heating element with specified wattage, voltage and ambient temperature.
4. Designing a split phase squirrel cage induction motor for a ceiling fan or domestic pump.

5. Design and fabrication of small single phase transformer, 100VA, 220/12V
6. Wiring and installation design of multistoried residential building(G+4, not less than 16 dwelling flats with lift and common pump)
7. Designing of power distribution system for a small township.
8. Designing of a substation.
9. Introduction to computer aided machine design.

Paper Name: Control System II

Paper Code: EE 601

Contact: 3L:0T:0P

Credit: 3

Prerequisite: Any introductory course on matrix algebra, calculus, Engineering Mechanics.

Course Objective: The purpose of this course is to provide

1. Fundamental concepts of State Variable Model of Continuous Dynamic System.
2. Knowledge of sampled data systems using Z transform, inverse z transform and stability in z domain. Basic knowledge of nonlinear systems with stability analysis using different methods.

Course Outcome:

EE601.1: Interpreting state-variable equations for different systems.

EE601.2: Express and solve system equations in state-variable form (state variable models).

EE601.3: Examine the stability of nonlinear systems using appropriate methods.

EE601.4: Analyze and design of discrete time control systems using z transform.

Course Content

Module – I: State Variable Model of Continuous Dynamic Systems [15L]

Converting higher order linear differential equations into state variable form. Obtaining SV model from transfer functions. Obtaining characteristic equation and transfer functions from SV model. Obtaining SV equations directly for R-L-C and spring-mass-dashpot systems.

Concept and properties associated with state equations. Linear Transformations on state variables. Canonical forms of SV equations. Companion forms. Solutions of state equations, state transition matrix, properties of state transition matrix.

Controllability and Observability. Linear State variable feedback controller, the pole allocation problems. Linear system design by state variable feedback.

Module – II: Analysis of Discrete Time (Sampled Data) Systems using Z-Transform [10L]

Difference Equations. Inverse Z transform. Stability and damping in z-domain. Practical sampled data systems and computer control. Practical and theoretical samplers. Sampling as Impulse modulation. Sampled spectra and aliasing. Anti-aliasing filters. Zero order hold. Approximation of discrete

(Z- domain) controllers with ZOH by Tustin transform and other methods.State variable analysis of sampled data system.Digital compensator design using frequency response.

Module – III: Introduction to Non-Linear Systems

[15L]

Block diagram and state variable representations. Characteristics of common nonlinearities.Phase plane analysis of linear and non-linear second order systems. Methods of obtaining phase plane trajectories by graphical method – isoclines method. Qualitative analysis of simple control systems by phase plane methods.Describing Function method. Limit cycles in non-linear systems. Prediction of limit cycles using describing function.Stability concepts for nonlinear systems. BIBO vs. State stability.Lyapunov's definition.Asymptotic stability, Global asymptotic stability.The first and second methods of Lyapunov methods to analyze nonlinear systems.

Paper Name: Power System II

Paper Code: EE 602

Contact: 3L:0T:0P

Credit: 3

Prerequisite: Power System 1, Machine-I, Basic Electrical, Circuit theory.

Course Objective: The purpose of this course is to provide knowledge of advance structure of power and power network and analysis of complex power network by different load flow methods and get a clear idea about different types of power system faults and protection schemes. By end of the course, the students should be able to gather high quality of electrical power system engineering in above mentioned fields.

Course Outcome: On successful completion of the learning sessions of the course, the learner will be able to

- EE 602.1.** Understand and explain the balanced three phase networks, per unit (PU) system, representation of one-line diagram, power system stability
- EE 602.2.** Apply the knowledge of load flow solution technique and solve problem load flow analysis using Gauss-Siedel method, Newton-Raphson method under loaded and unloaded conditions and analyse different power system faults(Symmetrical and unsymmetrical)
- EE 602.3.** Understand and explain the principle of operation and performance of different types of relay, circuit breakers and implies it in different protection scheme.

Course Content

Module – 1: Representation of Power system components

[6L]

Single-phase representation of balanced three phase networks, the one-line diagram and the Impedance or reactance diagram, per unit (PU) system.

Distribution substation:Types of substations, location of substations, substation equipments and accessories, Earthling (system & equipment), feeder and distributors, radial and loop systems.

Module – 2: Basic Idea of Real and Reactive Power Control

[2L]

Introduction to Real and Reactive Power Control (SMIB)Single machine connected to Infinite Bus.

Module – 3: Load Flow Studies**[8L]**

Network model formulation, formation of Ybus, load flow problem, Gauss-Siedel method, Newton-Raphson method, Decoupled load flow studies with flowchart, comparison of load flow methods.

Module –4: Power System Stability**[4L]**

Steady state stability, transient stability, equal area criteria, swing equation, multi machine Stability concept, Introductory idea of Voltage Stability and Voltage Collapsed

Module –5: Faults in Electrical Systems**[8L]**

Transient on a transmission line, short circuit of a synchronous machine under no load and Loaded condition. Symmetrical component transformation, sequence impedance and sequence network of power system, synchronous machine, transmission lines and transformers. Symmetrical component analysis of unsymmetrical faults, single line-to –ground fault, line to-line fault, double line-to- ground fault.

Module –6: Power System Protection**[16L]****i) Operating Principles and Relay Constructions:**

Functions of protective Relaying, different terminologies used in protective relaying, Basic Operation of relay, Electromagnetic Attraction Relays (Plunger type, Hinged armature type, Balanced beam type, Polarized moving iron type) advantages, disadvantages, applications of Electromagnetic attraction relays. Electromagnetic Induction type relays, theory of Induction relay torque, Induction Type Over current relay (non-directional), Induction Type Directional Power Relay, Directional over current relay. Distance Relay (Impedance relays, Reactance relay, MHO relay), Differential relay (Current differential relay, Voltage Balance Differential relay) Translay relay, Directional relay (Single phase directional relays), Negative Sequence Relays, Under Frequency Relays, over current Relays, Static Relays (Transducer relays, rectifier bridge relays, Transistors relays, Hall effect relays, Gauss effect relays). Over current Relays (Static time over current relays, Directional Static over current relay, static differential relay, static distance relays, Microprocessor Based relays, Universal relay torque equations, protection scheme for transformer, generators, motors, Bus Zone Protection, Protection of Transmission lines, C.T s and P.T s and their applications in the protective Schemes. Static Relays and Numerical Protections.

ii) Construction and operating principle of circuit Breaker:

Brief description of Circuit Breakers, Operating principle of Circuit breaker, Arc Phenomenon, principles of Arc Extinction, methods of arc Extinction, Voltage breaking transients, transient recovery voltage, current chopping and resistance switching, circuit breaker rating, arc and arc extinction, circuit breaker types, oil circuit breaker, vacuum circuit breaker, air blast circuit breaker, SF6 circuit breaker and Operating mechanism, advantages and disadvantages of different types of circuit breaker. Testing of Circuit Breakers.

Numerical problems to be solved in the tutorial classes.

Paper Name: Power Electronics

Paper Code: EE 603

Contact: 3L:0T:0P

Credit: 3

Prerequisites: Concept of Basic Electronics Course Objective

Course Objective:

1. Ability to understand and explain the principle of operation and performance of different power electronics devices.
2. Ability to prepare the students to analyze and design different power converter circuits. Ability to troubleshoot the operation of different power semiconductor devices.
3. Ability to study the various applications of power electronics to practical industrial applications, home appliances, power supply and controlling the flow of power.

Course Outcome: On successful completion of the learning sessions of the course, the learner will be able to

- EE 603.1.** Acquire knowledge about fundamental concepts and techniques used in power electronics.
- EE 603.2.** Analyze various single phase and three phase power converter circuits and understand their applications.
- EE 603.3.** Identify basic requirements for power electronics based design application.
- EE 603.4.** Develop skills to build, and troubleshoot power electronics circuits.
- EE 603.5.** Understand the use of power converters in commercial and industrial applications.

Course Content

Module– 1: Introduction [4L]

Concept of power electronics, application of power electronics, uncontrolled converters, advantages and disadvantages of power electronics converters, power electronics systems, power diodes, power transistors.

Module –2: Advances in Power Electronics Power Semiconductor Switches [7L]

Rectifier diodes, fast recovery diodes, Schottky barrier diode, BJT, Power MOSFET, SCR, TRIAC, IGBT,IGCT and GTO.Ratings, Static and Dynamic Characteristics, triggering and switching characteristics and cooling. SCR turn –on and turn - off methods, Triggering circuits, SCR Commutation circuits, SCR Series and Parallel operation, Snubber Circuit.

Module– 3: Phase Controlled Converters [7L]

Principle of operation of single phase and three phase half wave, half controlled, full controlled converters with R, R-L and RLE loads, effects of freewheeling diodes and source inductance on the performance of converters. Performance parameters of converters, Dual converters.

Module– 4: DC-DC Converters [5L]

Principle of operation, control strategies, Step up and Step down choppers, Buck, Boost, Buck - Boost and Cuk Converters, Concept of Resonant Switching.

Module– 5: Inverters [6L]

Principle of operation of single phase inverter, 120° and 180° conduction mode of operation of three phase inverter, performance parameters of inverters, PWM techniques, Sinusoidal PWM, modified Sinusoidal PWM - multiple PWM Voltage and harmonic Control, introduction to Space vector modulation method, Series resonant inverter-Current Sources Inverter.

Module –6: AC Controllers [5L]

AC Voltage Controllers, Single phase and three phase Cycloconverters – Power factor control and Matrix Converters.

Module –7: Applications [6L]

Speed control of AC and DC motors. HVDC transmission.Static circuit breaker, UPS, static VAR controller.

Paper Name: Digital Signal Processing**Paper Code: EC(EE)604****Contact: 3L:0T:0P****Credits: 3**

Prerequisites: Prerequisites for Digital signal Processing are required a thorough understanding of various signals, systems, and the methods to process a digital signal and also the knowledge of arithmetic of complex numbers and a good grasp of elementary calculus. The questions reflect the kinds of calculations that routinely appear in Signals. The candidates are expected to have a basic understanding of discrete mathematical structures. The candidates required the concept of Z-transform, Relation between Fourier transform and Z transform, Properties of ROC and properties of Z transform, Initial value theorem and final value theorem, stability considerations for LTI systems using Z-transform, Parseval's relation, Inverse Z-transform by Residue method, power series & partial-fraction expansions.

Course Objective:

1. To study the z-transform, convolution, correlation and applications of z -transform.
2. To introduce students with transforms for analysis of discrete time signals and systems.
3. To understand the digital signal processing, sampling and aliasing.
4. To use and understand implementation of digital filters. To study filter design techniques.
5. To study Discrete Fourier Transforms. To study Fast Fourier Transforms.
6. To study fixed point and floating point digital signal processors.

Course Outcome:

EC(EE)604.1: Define discrete systems in the Frequency domain using Fourier analysis tools like DFT, FFT.

EC(EE)604.2: Interpret the properties of discrete time signals in time domain and frequency domain.

EC(EE)604.3: Describe finite word length effects and digital filters.

EC(EE)604.4: Analyze convolution for long sequences of data.

EC(EE)604.5: Implement digital filters.

Course Outcome:

EC(EE) 604.1. Able to define discrete systems in the Frequency domain using Fourier analysis tools like DFT, FFT.

EC(EE) 604.2. Able to interpret the properties of discrete time signals in time domain and frequency domain.

EC(EE) 604.3. Able to describe finite word length effects and digital filters.

EC(EE) 604.4. Able to analyse convolution for long sequences of data.

EC(EE) 604.5. Able to implement digital filters.

Course Content

Module – 1: Discrete Fourier Transform and Fast Fourier Transform

Definition of DFT and IDFT, Twiddle factors and their properties, multiplication of DFTs, circular convolution, computation of circular convolution by graphical, DFT/IDFT and matrix methods, aliasing error, filtering of long data sequences using Overlap-Save and Overlap-Add methods.

Difference between DFT and FFT. Radix-2 algorithm, Decimation-In-Time, Decimation-In-Frequency algorithms, signal flow graphs Butterflies, Bit reversal.

Module – 2: Filter Design

Basic concepts of IIR and FIR filters, difference equations, Realization of Filters using Direct form –I, II & Cascade Form Design of IIR Filter using impulse invariant and bilinear transforms, approximation & Design of analog Butterworth Filter, Design of linear phase FIR filters, Concept of Symmetric & anti-Symmetric FIR Filter, Various kinds of Window: Rectangular, Hamming and Blackman windows.

Module – 3: Finite word Length Effects in Digital Filters

Input Quantization error, Product Quantization error, Coefficient, Quantization error, Zero- input Limit cycle Oscillations, Dead band, limit cycle Oscillations.

Module – 4: Application of DSP

Introduction to DSP Hardware TMS320C 5416/6713 processor. Concept of Sub-band coding, Speech analysis etc.

Text Books:

1. Digital Signal Processing – Principles, Algorithms and Applications, J.G.Proakis & D.G.Manolakis, Pearson Ed.
2. Digital Signal Processing, S.Salivahanan, A.Vallabraj & C. Gnanapriya, TMH Publishing Co. Digital Signal Processing, P. Rameshbabu, Scitech Publications (India).
3. Digital Signal processing – A Computer Based Approach, S.K.Mitra, TMH Publishing Co.

Reference Books:

Paper Name: Non-conventional Energy Sources and Applications

Paper Code: EE 605A

Contact: 3L:1T:0P

Credit: 4

Prerequisites: Any introductory course on non-conventional energy resources and their application.

Course Objective: The purpose of this course is to provide knowledge on different renewable energy sources for energy production for future growth and development.

Course Outcome: On successful completion of the learning sessions of the course, the learner will be able to

- EE 605A.1.** Student will be able to understand the importance of Renewable energy over conventional process and learn different methods of Power generation from the Non-conventional sources like Solar, Wind Energy, Biomass, Geothermal energy, OTEC, Tidal energy, MHD Power generation schemes.
- EE 605A.2.** Students will be able to analyze the different techniques of grid integration of the power generated from renewable energy sources with the initiation of power electronic converters and drives.
- EE 605A.3.** Students will be able to design different hybrid energy systems and energy storage systems.

Course Content

Module – 1: Introduction to Energy Sources

2L

Renewable and non-renewable energy sources, energy consumption as a measure of Nation's development; strategy for meeting the future energy requirements Global and National scenarios, Prospects of renewable energy sources. Impact of renewable energy generation on environment, Kyoto Protocol.

Module – 2: Solar Energy

10L

Solar Energy: Solar radiation - beam and diffuse radiation, solar constant, earth sun angles, attenuation and measurement of solar radiation, local solar time, derived solar angles, sunrise, sunset and day length.

Solar Thermal Systems: Flat plate collectors, Concentrating collectors, Solar air heaters-types, solar driers, storage of solar energy-thermal storage, solar pond, solar water heaters, solar distillation, solar still, solar cooker, solar heating & cooling of buildings,

Solar Photovoltaic Systems: Theory of solar cells, different types of PV Cells, Mono-poly Crystalline and amorphous Silicon solar cells. Concept of module, array. Classification of PV systems, Advantages and limitations. Efficiency and cost of PV systems & its applications in battery charging, and Lighting.

Module – 3: Wind Energy

6L

Principle of wind energy conversion; Basic components of wind energy conversion systems; wind mill components, various types and their constructional features; design considerations of horizontal and vertical axis wind machines: analysis of aerodynamic forces acting on wind mill blades and estimation of power output from wind turbine; wind data and site selection considerations, characteristics of different types of wind generators used with wind turbines.

Module – 4: Biomass Energy

5L

Biomass conversion technologies, Biogas generation plants, classification, advantages and disadvantages, constructional details, site selection, digester design consideration, filling a digester for starting, maintaining biogas production, Fuel properties of bio gas, utilization of biogas, Biodiesel

Module – 5: Geothermal Energy

3L

Estimation and nature of geothermal energy, geothermal sources and resources like hydrothermal, geo-pressured hot dry rock, magma. Advantages, disadvantages and application of geothermal energy, prospects of geothermal energy in India.

Module – 6: Energy from Ocean

4L

Thermal Electric Conversion (OTEC) systems like open cycle, closed cycle, Hybrid cycle, prospects of OTEC in India. Ocean Energy from tides, basic principle of tidal power, single basin and double basin tidal power plants, advantages, limitation and scope of tidal energy. Wave energy and power from wave, wave energy conversion devices, advantages and disadvantages of wave energy.

Module – 7: Magneto Hydrodynamic Power Generation

3L

Principle of MHD power generation, Classification of MHD system, Design problems and developments, gas conductivity, materials for MHD generators and future prospects.

Module – 8: Hydrogen Energy

3L

Introduction, Hydrogen Production methods, Hydrogen storage, hydrogen transportation, utilization of hydrogen gas, hydrogen as alternative fuel for vehicles.

Module – 9: Fuel Cell

2L

Introduction, Design principle and operation of fuel cell, Types of fuel cells, conversion efficiency of fuel cell, application of fuel cells, limitations and application of fuel cells.

Module – 10: Hybrid Systems

2L

Introduction to hybrid systems, Need for Hybrid Systems, Different type of Hybrid systems like Diesel-PV, Wind-PV, Microhydel-PV, Biomass-Diesel systems.

Text Books:

1. Non Conventional Energy Resources by S Hasan Saeed, D K Sharma
2. Non conventional Energy sources, G.D. Rai, Khanna Publishers
3. Non Conventional Energy Resources, B.H Khan, Mc Graw Hill Education (Chennai)

Reference Books:

1. Solar Energy: Principles of Thermal Collection and Storage, S. P. Sukhatme and J. K. Nayak, TMH, New Delhi.
2. Non Conventional Energy Resources And Utilisation. Er R.K Rajput, S Chand Publishers.

Paper Name: Introduction to Robotics

Paper Code: EE 605C

Contact: 3L:1T:0P

Credit: 4

Prerequisites: Computer Programming and Problem Solving

Course Objective:

1. To develop the student's knowledge in various robot structures and their workspace
2. To develop student's skills in performing spatial transformations associated with rigid body motions.
3. To provide the student with some knowledge and skills associated with robot control.

Course Outcome: On successful completion of this course, students should have the skills and knowledge to

EE 605C.1. Demonstrate the basics knowledge and skills in practical robotics applications

EE 605C.2. Ability to apply mechanical structures of industrial robots and their operational workspace characteristics

EE 605C.3. Students will demonstrate knowledge of robot controllers.

EE 605C.4. Understand and demonstrate an ability to simulate, program, and control commercial Robots through hands-on experiments

EE 605C.5. Understand industrial environment for robotics system

Course Content

Module – 1: Introduction

[3L]

Introduction to Robotics, brief history, types, classification and usage, The Engineering Design Process, Science and Technology of robots, Some useful websites, textbooks and research journals.

Module – 2: Elements of Robots

[2L]

Joints, links - Position and orientation of a rigid body, Homogeneous transformations, Representation of joints, link representation using D-H parameters, Examples of D-H parameters and link transforms,

Module – 3: Actuators and Sensors

[4L]

Different kinds of actuators – stepper, DC servo and brushless motors, model of a DC servo motor, Types of transmissions, Purpose of sensors, internal and external sensors, common sensors – encoders,

tachometers, strain gauge based force-torque sensors, proximity and distance measuring sensors, and vision.

Module –4: Introduction to Robot Mechanics

[4L]

Power and torque, Acceleration and velocity, Design models for ground mobile robots, Design models for mechanic arms and lifting systems

Module– 5: Fundamentals of Kinematics

[4L]

Introduction, Direct and inverse kinematics problems, Examples of kinematics of common serial manipulators, workspace of a serial robot, Inverse kinematics of constrained and redundant robots, Tractrix based approach for fixed and free robots and multi-body systems, simulations and experiments, Solution procedures using theory of elimination, Inverse kinematics solution for the general 6R serial manipulator.

Module– 6: Velocity and Statics of Robot Manipulators

[6L]

Linear and angular velocity of links, Velocity propagation, Manipulator Jacobians for serial and parallel manipulators, Velocity ellipse and ellipsoids, Singularity analysis for serial and parallel manipulators, Loss and gain of degree of freedom, Statics of serial and parallel manipulators, Statics and force transformation matrix of a Gough-Stewart platform, Singularity analysis and statics.

Module –7: Motion Planning and Control

[6L]

Joint and Cartesian space trajectory planning and generation, Classical control concepts using the example of control of a single link, Independent joint PID control, Control of a multi-link manipulator, Non-linear model based control schemes, Simulation and experimental case studies on serial and parallel manipulators, Control of constrained manipulators, Cartesian control, Force control and hybrid position/force control, Advanced topics in non-linear control of manipulators

Module – 8: Advanced Topics in Robotics

[5L]

Sensing distance and direction, Line Following Algorithms, Feedback Systems, Other topics on advance robotic techniques

Text Books:

1. John J. Craig: Mechanics and Control (3rd Edition) 3rd Edition
2. Schilling: Fundamentals of Robotics - Analysis And Control Paperback – 2006
3. Frank Casale (Author), Rebecca Dilla (Author): Introduction to Robotic Process Automation: a Primer Kindle Edition

Reference Books:

1. Robotics: Fundamental Concepts and Analysis, Oxford University Press, Second reprint, May 2008.
2. Material from other textbooks and robotics journals as mentioned.

All modules have Additional Material for self-study and reference.

Course Name: Mechatronics**Course Code: EE 605D****Contact: 3L:1T:0P****Credit: 4****Prerequisites:** Electronics, Basics of Electrical & Mechanical Engineering, Control System – I.**Course Objective:**

1. To provide with basic knowledge of sensors, actuators, their control and robotics.
2. To make students understand about the process of integration of sensors & actuators, control system, signal processing, power electronics to perform complex tasks.
3. To make students familiar with real time controller operation.

Course Outcome: After successful completion of the course students

EE 605D.1. can realize the importance of mechatronic system to perform complex tasks, can elaborate the step wise integration of sensors & actuators, control system, signal processing, power electronics.

EE 605D.2. will be able to demonstrate basic operations of PLC, different control theory and understand mechatronic applications.

Course Content

Module – 1: Introduction**(2)**

Introduction to Mechatronic & measurement systems, Evolution, Scope, components of mechatronic systems, advantages & disadvantages, examples, Control Systems, open and close loop systems, sequential controllers, microprocessor based controllers, mechatronics approach.

Module – 2: Review of Basic Electronics**(4)**

Review of fundamentals of electronics, logic gates and their operations, Data conversion devices, electrical contacts, actuators, and switches, contactless input devices, signal processing devices, Data Acquisition systems.

Module – 3: Sensors and Transducers**(6)**

Introduction, performance terminology-Displacement, Position and Proximity, Velocity and motion, force, flow sensor, Temperature Sensors-Light Sensors, LVDT, Strain gauge load cell, Selection of Sensors-Signal Processing.

Module – 4: Actuation System**(6)**

Pneumatic and Hydraulic Systems – Directional Control Valves, Rotary Actuators. Mechanical Actuation Systems – Cams – Gear Trains – Ratchet and pawl – Belt and Chain Drives – Bearings. Electrical Actuation Systems – Mechanical Switches – Solid State Switches – Solenoids – relays. Construction and working principle of DC and AC Motors. Speed control of AC and DC drives, Stepper Motors-switching circuitries for stepper motor – AC & DC Servo motors

Module – 5: Controllers**(6)**

Continuous and discrete process Controllers– Control Mode – Two – Step mode –Proportional Mode – Derivative Mode– Integral Mode – PID Controllers – Digital Controllers – Velocity Control – Adaptive Control – Digital Logic Control. Microprocessor based Temperature control, Stepper motor control, Traffic light controller.

Module – 7: Programmable Logic Controller**(5)**

Introduction, Basic structure, Input/ Output Processing, Programming, Mnemonics, Timers, Internal relays and counters, Data handling, Analog Input/Output, Selection of a PLC.

Module - 8: Application of Robots and Other Mechatronic Applications**(5)**

Handling, loading, & unloading, Welding, Spray painting, Assembly, Machining, Inspection, Rescue robots, Underwater robots, Parallel robot, and Medical robot. Electronic Thermostat, Automatic Camera, Air fuel ratio controller in Automobiles, Digital Engine Control, Vehicle Motion Control, Mobile robots etc.

Course Name: Introduction to Programming in JAVA

Course Code: CS(EE) 606A

Contact: 3L:0T:0P

Credit: 3

Prerequisites:

1. Computer Fundamentals.
2. Basic understanding of Computer Programming and related Programming Paradigms.
3. Problem Solving Techniques with proper logic Implementation.
4. Basic Computer memory architecture with data accession.

Course Objective:

1. It allows to map with real world Object (Object orientation) rather than action(Procedure) that comes to produce softwares as separated code modules which rise updecoupling and increases code re-usability.
2. It demonstrates that how can you change the implementation of an object withoutaffecting any other code by increasing data security and protecting unwanted data access.(Encapsulation).
3. It allows you to have many different functions, all with the same name, all doing thesame job, but depending upon different data. (Polymorphism).
4. It guides you to write generic code: which will work with a range of data, so you don'thave to write basic stuff over, and over again. (Generics).
5. It lets you write a set of functions, then expand them in different direction withoutchanging or copying them in any way. (Inheritance).

Course Outcome:

- CS(EE) 606A.1.** Design the process of interaction between Objects, classes & methods w.r.t. Object Oriented Programming.
- CS(EE) 606A.2.** Acquire a basic knowledge of Object Orientation with different properties as well as different features of Java.
- CS(EE) 606A.3.** Analyze various activities of different string handling functions with various I/O operations.
- CS(EE) 606A.4.** Discuss basic Code Reusability concept w.r.t. Inheritance, Package and Interface.
- CS(EE) 606A.5.** Implement Exception handling, Multithreading and Applet (Web program in java) programming concept in Java.

Course Content

Module – 1: Introduction

[5L]

Object Oriented Analysis & Design-Concepts of object oriented programming language, Object, Class.[1L]; Relationships among objects and classes-Generalization, Specialization, Aggregation, Association, Composition, links, Meta-class.[1L]; Object Oriented Programming concepts - Difference between OOP and other conventional programming – advantages and disadvantages. Class, object, Method.[1L]; Properties of OOP- message passing, inheritance, encapsulation, polymorphism, Data abstraction.[1L]; Difference between different OOPs Languages. [1L]

Module – 2: Java Basics

[9L]

Basic concepts of java programming - Advantages of java, Byte-code & JVM, Data types, Different types of Variables.[1L]; Access specifiers, Operators, Control statements & loops.[1L]; Array.[1L]; Creation of class, object, method.[1L]; Constructor- Definition, Usage of Constructor, Different types of Constructor. [1L]; finalize method and garbage collection, Method & Constructor overloading. [1L]; this keyword, use of objects as parameter & methods returning objects. [1L]; Call by value & call by reference. [1L]; Static variables & methods. Nested & inner classes.[1L].

Module – 3: Basic String handling & I/O

[4L]

Basic string handling concepts- Concept of mutable and immutable string, Methods of String class- charAt(), compareTo(), equals(), equalsIgnoreCase(), indexOf(), length(), substring(). [1L]; toCharArray(), toLowerCase(), toString(), toUpperCase(), trim(), valueOf() methods, Methods of String buffer class- append(), capacity(), charAt(), delete(), deleteCharAt(). [1L]; ensureCapacity(), getChars(), indexOf(), insert(), length(), setCharAt(), setLength(), substring(), toString(). [1L]; Command line arguments, basics of I/O operations – keyboard input using BufferedReader & Scanner classes. [1L].

Module – 4: Inheritance and Java Packages

[8L]

Inheritance - Definition, Advantages, Different types of inheritance and their implementation. [1L]; Super and final keywords, super() method. [1L]; Method overriding, Dynamic method dispatch.[1L]; Abstract classes & methods.[1L]; Interface - Definition, Use of Interface.[1L]; Multiple inheritance by using Interface.[1L]; Java Packages -Definition, Creation of packages.[1L]; Importing packages, member access for packages. [1L]

Module – 5: Exception handling, Multithreading and Applet Programming

[10L]

Exception handling - Basics, different types of exception classes. Difference between Checked & Unchecked Exception. [1L]; Try & catch related case studies.[1L]; Throw, throws & finally. [1L]; Creation of user defined exception. [1L]; Multithreading - Basics, main thread, thread life cycle.[1L]; Creation of multiple threads-yield(), suspend(), sleep(n), resume(), wait(), notify(), join(), isAlive().[1L]; Thread priorities, thread synchronization.[1L]; Interthread communication, deadlocks for threads[1L]; Applet Programming - Basics, applet life cycle, difference between application & applet programming[1L]; Parameter passing in applets. [1L]

Paper Name: Object Oriented Programming using C++**Code: CS(EE) 606B****Contact: 3L:0T:0P****Credit: 3****Prerequisites:**

1. Computer Fundamentals and Principle of Computer Programming.
2. Basic Understanding of C++.

Course Objective:

1. Provide flexible and powerful abstraction
2. Allow programmers to think in terms of the structure of the problem rather than in terms of the structure of the computer.
3. Decompose the problem into a set of objects
4. Objects interact with each other to solve the problem
5. Create new type of objects to model elements from the problem space

Course Outcome:

CS (EE) 606B.1 Creating simple programs using classes and objects in C++.

CS (EE) 606B.2 Implement Object Oriented Programming Concepts in C++.

CS (EE) 606B.3 Develop applications using stream I/O and file I/O.

CS (EE) 606B.4 Implement simple graphical user interfaces.

CS (EE) 606B.5 Implement Object Oriented Programs using templates and exceptional handling concepts.

Course Content

Module 1: Principles of Objective Oriented Programming 6L

Object Oriented Programming Paradigm, Basic Concepts of ObjectOriented Programming, Benefits of Object Oriented Programming, Object Oriented Languages, Applications of Object Oriented Programming, Beginning with C++.

Module 2: Token Expressions and Control Structures 6L

Tokens, Keywords, Identifiers and Constants, Data Types, TypeCompatibility, Variables, Operators in C++, Implicit Conversions, Operator Overloading, Operator Precedence, Control Structures.

Module 3: Functions in C++, Classes and Objects 10L

The Main Function, Function Prototyping, Call by Reference, Returnby Reference, Inline Functions, Function Overloading, Friend and Virtual Functions. Specifying a class, Member Functions, Arrays within a class, Static Member Functions, Arrays of Objects, Friendly Functions.

Module 4: Constructors and Destructors, Operator Overloading, Inheritance 10L

Constructors, Parameterized Constructors, Copy Constructors, Dynamic Constructors, Destructors, Defining Operator Overloading, Overloading Operators, Rules for Overloading Operators, TypeConversions

Module 5: Pointers, Virtual Functions and Polymorphism, Working with Files, Exception handling 10L

Pointers, Pointers to Objects, this pointer, Pointer to Derived, Classes, Virtual Functions, Classes for File Stream Operations, Opening and Closing a File, File Modes, File Pointers, InputOutput Operations, Updating a File.

Module 6: An Object Oriented Approach in Real Life Problems 6L

Object Orientation O Development O Themes, Modelling, Abstraction Models

Text Books:

1. Object Oriented Design by Rumbaugh, Pearson publication.
2. Object-oriented programming in Turbo C++ By Robert Lafore, Galgotia Publication.
3. Object-oriented programming with C++ by E. Balagurusamy, 2nd Edition, TMH.

Reference Books:

1. Ashok N. Kamthane, Object oriented Programming with ANSI & Turbo C++, 5th Edition, Pearson India.
2. D. Ravichandran, Programming with C++, 2nd Edition, Tata McGraw- Hill.

Paper Name: Computer Architecture and Operating Systems**Code: CS(EE) 606C****Contact: 3L:0T:0P****Credit: 3****Prerequisites:**

1. Microprocessors and Microcontrollers
2. Knowledge of C
3. Elementary data structures and algorithms

Course Objective: The overall objective of this course is to provide a comprehensive overview of the basic features of a computer. It puts together basic computer organization, systems software and operating systems. The course lays the basis for more advanced topics in computer science, both hardware and software.

Course Outcomes:

- CS(EE) 606C.1.** Recognise the main components of a typical computer, analyse and communicate their individual behaviour, as well as their interactions.
- CS(EE) 606C.2.** Identify the main components of an operating system (OS), analyse and communicate the structure and behaviour of OS components in isolation, as well as their interactions.

- CS(EE) 606C.3.** Apply the principles of resource management and concurrency to analyse the main design problems at the Operating System level, and critically evaluate the approaches taken by modern-day operating systems in solving them.
- CS(EE) 606C.4.** Critically evaluate security risks in operating systems and the role operating systems can and should play in establishing security.

Course Content

| | |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| Module 1: Fundamentals of Computer Architecture Information coding, Boolean functions, arithmetic. | 3L |
| Module 2: Digital Design Combinational circuits, sequential circuits, special purpose architectures (control unit + data path), programmable units. | 4L |
| Module 3: Computer Architecture Basic principles, instruction set, processor, memory hierarchy, I/O organization. | 3L |
| Module 4: Operating Systems Evolution and role of the operating system. Architectural concepts. Organization and functionality of an operating system. | 3L |
| Module 5: Process Management Processes. Process status. Context switch. Process creation and termination. Thread. User-level threads and kernel-level threads. Process cooperation and communication: shared memory, messages. Direct and indirect communication. | 5L |
| Module 6: Scheduling CPU and I/O burst model. Long term, short term and medium term scheduling. Preemption. Scheduling criteria. Scheduling algorithm: FCFS, SJF, priority-based, RR, HRRN, multiple queues with and without feedback. Algorithm evaluation: deterministic and probabilistic models, simulation. | 5L |
| Module 7: Process Synchronization Data coherency, atomic operations. Critical sections. SW approaches for mutual exclusion: Peterson and Dekker's algorithms, baker's algorithm. HW for mutual exclusion: test and set, swap. Synchronization constructs: semaphores, mutex, monitor. | 4L |
| Module 8: Deadlock Deadlock conditions. Resource allocation graph. Deadlock prevention. Deadlock avoidance. Banker's algorithm. Deadlock detection and recovery. | 3L |
| Module 9: Memory Management <i>Main Memory:</i> | 9L |

Logical and physical addressing. Relocation, address binding. Swapping. Memory allocation. Internal and external fragmentation. Paging. HW for paging: TLB. Page table. Multi-level paging. Segmentation. Segment table. Segmentation with paging.

Virtual Memory:

Paging on demand. Page fault management. Page substitution algorithms: FIFO, optimal, LRU, LRU approximations. Page buffering. Frame allocation: local and global allocation. Thrashing. Working set model. Page fault frequency.

Secondary Memory:

Logical and physical structure of disks. Latency time. Disk scheduling algorithms: FCFS, SSTF, SCAN, C-SCAN, LOOK, C-LOOK. RAID.

Module 10: File System

5L

File, attributes and related operation. File types. Sequential and direct access. Directory structure. Access permissions and modes. Consistency semantics. File system structure. File system mounting. Allocation techniques: adjacent, linked, indexed. Free space management: bit vector, lists. Directory implementation: linear list, hash table.

Module 11: I/O Subsystem

4L

I/O Hardware. I/O techniques: programmed I/O, interrupt, DMA. Device driver and application interface. I/O kernel services: scheduling, buffering, caching, spooling.

Paper Name: Software Engineering

Code: CS(EE) 606D

Contact: 3L:0T:0P

Credit: 3

Prerequisites: An understanding of basic computer software Object Oriented programming skills.

Course Objective:

1. To understand the working environment in industry and aware of cultural diversity, who conduct themselves ethically and professionally.
2. Graduates use effective communication skills and technical skills to assure production of quality software, on time and within budget.
3. Graduates build upon and adapt knowledge of science, mathematics, and engineering to take on more expansive tasks that require an increased level of self-reliance, technical expertise, and leadership.

Course Outcomes:

- CS(EE) 606D.1.** To identify, formulate, and solve software engineering problems, including the specification, design, implementation, and testing of software systems that meet specification, performance, maintenance and quality requirements
- CS(EE) 606D.2.** To analyze, elicit and specify software requirements through a productive working relationship with various stakeholders of the project
- CS(EE) 606D.3.** To design applicable solutions in one or more application domains using software engineering approaches that integrates ethical, social, legal and economic concerns.
- CS(EE) 606D.4.** To acquire the ability to function effectively in teams.
- CS(EE) 606D.5.** To develop the code from the design and effectively apply relevant standards and perform testing, and quality management and practice.
- CS(EE) 606D.6.** To identify modern engineering tools necessary for software project management, time management and software reuse, and an ability to engage in life-long learning.

Course Content

Module – 1:

(6L)

Software Engineering -Characteristics, Components, Application, Definitions, Software Process models - Waterfall Model, Prototype model, RAD, Evolutionary Models, Incremental, Spiral.Agile Method.
Software Project Planning - Feasibility Analysis, Technical Feasibility, Cost- Benefit Analysis, COCOMO (Basic, intermediate, Complete) model.

Module – 2:

(3L)

System Analysis:Principle of Structure Analysis, Requirement Analysis, DFD, Entity Relationship Diagram, Data Dictionary, Data Modelling, Software Requirements Specification

Module – 3:

(3L)

Software Design Aspects:Objectives, Principles, Concepts, Top-Down and Bottom-Up design; Decision tree, decision table and structured English, Structure chart, Transform analysis Functional vs. Object-Oriented approach.

Module – 4:**(4L)**

Unified Modelling Language: Class diagram, interaction diagram: collaboration diagram, sequence diagram, state chart diagram, activity, diagram, implementation diagram, Use Case diagram.

Module – 5:**(14L)**

Coding & Documentation – Structured Programming, Modular Programming, Module Relationship- Coupling, Cohesion, OO Programming, Information Hiding, Reuse, System Documentation.[4L]

Testing – Levels of Testing, Integration Testing, System Testing. [4L]

Test Cases- White Box and Black Box testing Software Quality, Quality Assurance, Software Maintenance, Software Configuration Management, Software Architecture. [6L]

Module – 6:**(6L)**

Software Project Management – Project Scheduling, Staffing, Quality Assurance, Risk Management: Reactive vs. Proactive Risk strategies, software risks, Risk identification, Risk projection, Risk refinement Project Monitoring.

Paper Name: Control System II Laboratory

Code: EE 691

Contact: 0L:0T:3P

Credit: 2

Prerequisites: Knowledge of MATLAB.

Course Objective: Provide knowledge of position control system and non-linear control systems with their response analysis.

Course Outcomes: On completion of the course students will be able to

EE691.1: Conduct experiments on Position Control with proper tuning of P, PI and PID controller.

EE691.2: Demonstrate Lead-Lag Compensators.

EE691.3: Investigate the response of a Real Time System using State Variable Analysis.

EE691.4: Analyse Performance of Discrete-Time System and Non-Linear System.

Course Content

List of Experiments:

1. ***Study of a Practical Position Control System:***
Obtaining closed step responses for gain setting corresponding to over-damped and under-damped responses. Determination of rise time and peak time using individualized components in SIMULINK. Determination of un-damped natural frequency and damping ratio from the experimental data.
2. ***Tuning of P, PI, and PID Controller for First Order Plant with Dead Time using Z-N Method:***
Process parameters (time constant and delay/lag) will be provided, the students would compute controller gains by using Z-N method. Steady state and transient performance of the closed loop plant with and without steady disturbances will have to be noted. Theoretical phase and gain margins will have to be manually computed for each gain settings.
3. ***Design of Lead and Lag Compensation using Cascade Tools:***
Plant transfer function will be provided. Step response is to be obtained (PSPICE, MATLAB, SciLab may be used).
4. ***State Variable Analysis using Cascade Command Tool:***
Familiarization and use of *CASCADE* command for state variable analysis. Obtaining transfer function from SV model and vice versa. Obtaining step response for a SISO system given in SV form (PSPICE, MATLAB, SciLab may be used).
5. ***State Variable Analysis using Cascad Block Diagram Tool:***
Familiarization and use of *CASCADE BLOCK DIAGRAM TOOL* for state variable analysis. Obtaining step response and initial condition response for a single input, two output system given in SV form (PSPICE, MATLAB, SciLab may be used).
6. ***Performance Analysis of a Discrete Time System using Cascade Tool:***

Familiarization and use of CACSAD block diagram tool for Digital Control System. Study of closed response of a continuous system with a digital controller with sample and hold (PSPICE, MATLAB, SciLab may be used).

7. ***Studying The Effects of Nonlinearity in a Feedback Controlled System using Time Response:***
Determination of step response with a limiter nonlinearity introduced into the forward path of 2nd order unity feedback control systems. The open loop plant will have one pole at the origin and the other pole will be in LHP or RHP. To verify that (i) with open loop stable pole, the response is slowed down for larger amplitude input and (ii) for unstable plant, the closed loop system may become oscillatory with large input amplitude (PSPICE, MATLAB, SciLab may be used).
8. ***Studying The Effects of Nonlinearity in a Feedback Controlled System using Phase Plane Plots:***
Determination of phase plane trajectory and possibility of limit cycle of common nonlinearities. CASCADE block diagram tool will be used (PSPICE, MATLAB, SciLab may be used).

Reference Books:

Paper Name: Power System II Laboratory

Paper Code: EE692

Contact: 0L:0T:3P

Credit: 2

Prerequisites: Power Systems - I, Electrical Machines - I, Circuit Theory

Course Objective:

1. To design and conduct experiments on various power system components-analyze and interpret data.
2. To give hands on experience in using modern software tools for simulation of various power system controls.
3. Acquiring these knowledge Students are ready to perform to industrial and research power system laboratory.

Course Outcomes: On completion of the course students will be able to

EE692.1. Analyse the testing, operation and response of protection of electrical instruments.

EE692.2.Conduct experimental investigation and gain knowledge of various parts of relays and its operation.

EE692.3.Able to incorporate the measuring error with actual value and calibrate the instrument transformers.

EE692.4. Enhance the capability of software analysis by load flow solution in ETAP, MATLAB etc.

Course Content

List of Experiments:

1. Study on (i) on load Time Delay Relay (ii) off load Time Delay Relay
2. Polarity, Ratio and Magnetization Characteristics Test of CT & PT
3. Testing on (i) Under Voltage Relay and (ii) Earth Fault Relay
4. Study on D C Load Flow
5. Study of A C Load Flow Using Gauss – Seidel Method
6. Study of A C Load Flow Using Newton -Raphson Method
7. Study of IEEE 30,66 bus Load Flow by Software Simulation(ETAP, MATLAB or others)
8. Study on Economic Load Dispatch by software
9. Study of Transformer Protection by Simulation
10. Study of Generator Protection by Simulation
11. Study of Motor Protection by Micom Relay
12. Study of Different Characteristics of Over Current Relay

Paper Name: Power Electronics Laboratory

Paper Code: EE693

Contact: 0L:0T:3P

Credit: 2

Prerequisites: Concept of Basic Electronics

Course Objective: The objectives of this course are

1. To prepare students to perform the analysis of any power electronics circuit.
2. To study of the characteristics of different power electronics devices and how it's work.
3. Familiar with PSIM Software to study of the operation of different power electronics converter.
4. Using PSIM Software plot different circuit wave response and also find out the average value, peak value and RMS value of different voltages & currents.

Course Outcome: On successful completion of the learning sessions of the course, student will be able to:

EE693.1: Acquire knowledge about fundamental concepts and techniques used in power electronics.

EE693.2: Understand the use of power converters in commercial and industrial applications.

EE693.3: Analyze various single phase and three phase power converter circuits and understand their applications.

EE693.4: Identify basic requirements for power electronics based design application.

EE693.5: Develop skills to build, and troubleshoot power electronics circuits.

Course Content

List of Experiments:

1. Study of the characteristics of an SCR.
2. Study of the characteristics of a TRIAC
3. Study of different triggering circuits of an SCR.
4. Study of the operation of a single phase full controlled bridge converter with R and R-L load.
5. Study of performance of single phase half controlled symmetrical and asymmetrical bridge converters.
6. Study of performance of step down chopper with R and R-L load.
7. Study of performance of single phase controlled converter with and without source inductance (simulation)
8. Study of performance of step up and step down chopper with MOSFET, IGBT and GTO as switch (simulation).
9. Study of performance of single phase half controlled symmetrical and asymmetrical bridge converter. (Simulation)
10. Study of performance of three phase controlled converter with R & R-L load (simulation)
11. Introduction to PLC and different industrial applications.

Paper Name: Introduction to Programming in JAVA Laboratory**Paper Code: CS(EE) 696A****Contact: 0L:0T:2P****Credit: 1****Prerequisites:** Knowledge of C programming language**Course Objective:**

1. Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
2. Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc.
3. Be aware of the important topics and principles of software development.
4. Have the ability to write a computer program to solve specified problems.
5. Be able to use the Java SDK environment to create, debug and run simple Java programs.

Course Outcomes: After successful completion of the course, the students are able to**CS(EE)696A.1.** Use the syntax and semantics of java programming language and basic concepts of OOP.**CS(EE)696A.2.** Develop reusable programs using the concepts of inheritance, polymorphism, interfaces and packages.**CS(EE)696A.3.** Apply the concepts of Multithreading and Exception handling to develop efficient and error free codes.**CS(EE)696A.4.** Design event driven GUI and web related applications which mimic the real word scenarios.

Course Content

List of Experiments:

1. Assignments on Basic Object oriented programming in java using class-object & method, constructor (Default constructor, parameterized constructor, Copy constructor), method/constructor overloading.
2. Assignments on Inheritance (Single Inheritance, Multilevel Inheritance, Hierarchical Inheritance) method overriding.
3. Assignments on Dynamic method Dispatch, encapsulation, this keyword, super keyword & super () method, static keyword, final keyword.
4. Assignments on developing Data abstraction- Abstract class & abstract methods, interfaces- multiple inheritance, extending interfaces.
5. Assignments on creating and accessing packages, exception handling (Different case studies of try-catch-finally block, chained exception, user defined exception with throw and throws keyword.)
6. Assignments on multithreaded programming-Thread creation, different method implementation of Thread life cycle (yield(),suspend(),resume(),sleep(n),join(),isAlive(), wait(), notify()), Thread priority, Thread Synchronization.
7. Assignments on applet programming.

Text Books:

1. Herbert Schildt – "Java: The Complete Reference " – 9th Ed. – TMH
2. E. Balagurusamy – " Programming With Java: A Primer " – 3rd Ed. – TMH.

Paper Name: Software Engineering Laboratory

Paper Code: CS(EE) 696D

Contact: 0L:0T:2P

Credit: 1

Prerequisites: For Software Engineering Laboratory, design a project proposal which will be used throughout the lab for performing different experiments using CASE Tools.

Course Objective:

1. To learn software development skill through various stages of software life cycle.

- To ensure the quality of software through software development with various protocol based environment.

Course Outcome:

CS(EE) 696D.1. To handle software development models through rational method.

CS(EE) 696D.2. To prepare SRS document, design document, test cases and software configuration management and risk management related document.

CS(EE) 696D.3. To Develop function oriented and object oriented software design using tools like rational rose.

CS(EE) 696D.4. To perform unit testing and integration testing.

CS(EE) 696D.5. To apply various white box and black box testing techniques.

Course Content***Assignments to be given from the following:***

- Preparation of requirement document for standard application problems in standard format. (e.g. Library Management System, Railway Reservation system, Hospital management System, University Admission system). DFD of standard application problems.
- Project Schedule preparation. Software Requirement Analysis: Describe the individual Phases/ modules of the project, Identify deliverables.
- Use Case diagram, Class Diagram, Sequence Diagram, Activity Diagram and prepare Software Design Document using tools like Rational Rose.(For standard application problems)
- Software Development and Debugging. Estimation of project size using Function Point(FP) for calculation.
- Design Test Script/Test Plan(both Black box and White Box approach)
- Compute Process and Product Metrics (e.g. Defect Density, Defect Age, Productivity, Cost etc.) Cost Estimation models. COCOMO

Recommended Book:

- Software Engineering: A practitioner's approach– Pressman(TM)
- Software Engineering- Pankaj Jalote (Wiley-India)

Paper Name: Object Oriented Programming using C++ Laboratory

Paper Code: CS(EE) 696B

Contact: 0L:0T:2P

Credit: 1

Prerequisites: Computer Fundamentals and Principle of Computer Programming Laboratory.

Course Objective: The objective of course is to develop programming skills of students, using object oriented programming concepts, learn the concept of class and object using C++ and develop classes for simple applications.

Course Outcomes: On successful completion of the course, the student will be able to

CS(EE) 696B.1. identify importance of object oriented programming and difference between structured oriented and object oriented programming features.

CS(EE) 696B.2. demonstrate use of objects and classes for developing programs.

CS(EE) 696B.3. apply various object oriented concepts to solve different problems.

Course Content

1. To find the sum of two numbers using function.
2. To find Simple Interest and Compound Interest.
3. To demonstrate the working of following Loops: While, Do While, For, If-Else, switch
4. To find greatest of three numbers.
5. To check whether a number is even or odd.
6. To check whether a year is leap year or not.
7. To add and subtract two matrices.
8. To display elements of an array.
9. To calculate Sum and Average of an array.
10. To sort elements of an array using Bubble sort.
11. To calculate Factorial of a number.
12. To check whether a given number is Prime or not.
13. To generate Fibonacci series.
14. To show function Overloading.
15. To create a class and access member function of a class
16. To show Constructor and Destructor in a class
17. To convert the temperature in Fahrenheit to Celsius and vice-a-verse
18. To show the concept of Single inheritance in classes

Paper Name: Computer Architecture and Operating Systems Laboratory

Paper Code: CS(EE) 696C

Contact: 0L:0T:2P

Credit: 1

Prerequisites:

1. Digital Systems
2. Introduction to Computers
3. Systems Programming

Course Objective:

1. To learn Unix commands and shell programming
2. To implement various CPU Scheduling Algorithms
3. To implement Process Creation and Inter Process Communication.
4. To implement Deadlock Avoidance and Deadlock Detection Algorithms
5. To implement Page Replacement Algorithms
6. To implement File Organization and File Allocation Strategies

Course Outcome: At the end of the course, the student should be able to

CS(EE) 696C.1. Compare the performance of various CPU Scheduling Algorithms.

CS(EE) 696C.2. Implement Deadlock avoidance and Detection Algorithms.

CS(EE) 696C.3. Implement Semaphores.

CS(EE) 696C.4. Create processes and implement IPC.

CS(EE) 696C.5. Analyze the performance of the various Page Replacement Algorithms.

CS(EE) 696C.6. Implement File Organization and File Allocation Strategies.

Course Content

List of Experiments:

1. Basics of UNIX commands
2. Write programs using the following system calls of UNIX operating system fork, exec, getpid, exit, wait, close, stat, opendir, readdir
3. Write C programs to simulate UNIX commands like cp, ls, grep, etc.
4. Shell Programming
5. Write C programs to implement the various CPU Scheduling Algorithms
6. Implementation of Semaphores
7. Implementation of Shared memory and IPC
8. Bankers Algorithm for Deadlock Avoidance
9. Implementation of Deadlock Detection Algorithm
10. Write C program to implement Threading & Synchronization Applications
11. Implementation of the following Memory Allocation Methods for fixed partition
 - a) First Fit

- b) Worst Fit
- c) Best Fit
- 12. Implementation of Paging Technique of Memory Management
- 13. Implementation of the following Page Replacement Algorithms
 - a) FIFO
 - b) LRU
 - c) LFU
- 14. Implementation of the various File Organization Techniques
- 15. Implementation of the following File Allocation Strategies
 - a) Sequential
 - b) Indexed
 - c) Linked

Paper Name: Electrical System Design II**Paper Code: EE 681****Contact: 0L:1T:3P****Credit: 2**

Prerequisites: Concept of Stationary and Rotating machines, Magnetic Circuit and coupling, basic knowledge of computer aided drawing.

Course Objective:

1. Ability to understand the various parts and performance of Machines.
2. Ability to design and estimate for a particular machine.
3. Ability to design magnetic circuit of machines and performance and characteristics study.

Course Outcome: On completion of the course students will be able to

EE 681.1. Gain knowledge of designing a system.

EE 681.2. Synchronize different machines in a system.

EE 681.3. Use of theoretical designing concept to implement a practical model.

EE 681.4. Estimate and planning system.

Course Content

List of Experiments:

1. Designing the power distribution system for a small township.
2. Designing a double circuit transmission line for a given voltage level and power (MVA) transfer.
3. Designing a three phase squirrel cage induction motor.
4. Designing a permanent magnet fractional hp servo motor
5. Project module using computer aided machine design.

Paper Name: ELECTRIC DRIVES

Paper Code: EE701

Total Contact Hours: 30

Credit: 3

Pre requisites:

Concept of Electrical Machines and Power Electronics.

Course Objective:

1. Provide knowledge to select electrical machines for particular drive requirement.
2. Study the characteristics and the operation of electrical machines for specific requirement.

Course Outcomes:

EE701.1. Student will be able to select electric motors for a particular drive based on their characteristics.

EE701.2. Student will be able to accrue the knowledge of speed-control of DC motors and Induction motors.

EE701.3. Student will be able to accrue the knowledge of power electronic converters used for DC motor and Induction motor speed control.

Course contents:

Module – I: Electric Drive (4L)

Concept, classification, parts and advantages of electrical drives, Types of Loads, Fundamental torque equations, Equivalent value of drive parameters for loads with rotational and translational motion.
2L

Determination of moment of inertia, Steady state stability, Transient stability. Multi-quadrant operation of drives.
2L

Module – II: Motor Power Rating (3L)

Thermal model of motor for heating and cooling, classes of motor duty, determination of motor rating for continuous, short time and intermittent duty, equivalent current, torque and power methods of determination of rating for fluctuating and intermittent loads. 3L

Module – III: Starting of Electric Drives (2L)

Effect of starting on Power supply, motor and load. Methods of starting of electric motors. Acceleration time Energy relation during starting, methods to reduce the Energy loss during starting. 2L

Module – IV: DC Motor Drives (11L)

Review of fundamental equations of DC machines, torque-speed characteristics of separately excited DC motor, conventional method of speed control – armature voltage control and field flux control. 1L

Single phase and three phases fully controlled and half controlled DC drives, Dual converter control of DC drives. Power factor, supply harmonics and ripple in motor current. 3L

Chopper fed DC motor for speed control, armature current waveform and ripple, calculation of losses in DC motor and chopper, efficiency of DC drive. 2L

Motoring and generating modes operation of a separately excited dc machine, four quadrant operation of DC machine; single-quadrant, two-quadrant and four-quadrant choppers; steady-state operation of multi-quadrant chopper fed DC drive, regenerative braking. 2L

Control structure of DC drive, inner current loop and outer speed loop, dynamic model of DC motor – dynamic equations and transfer functions, plant transfer function, current controller specification and design, speed controller specification and design. 3L

Module – V: Induction Motor Drives (7L)

Review of induction motor equivalent circuit and torque-speed characteristic, variation of torque speed curve with (i) applied voltage, (ii) applied frequency and (iii) applied voltage and frequency, constant flux operation, flux weakening

operation.

2L

Review of three-phase voltage source inverter, generation of three-phase PWM signals, sinusoidal modulation, space vector theory, conventional space vector modulation; constant V/f control of induction motor, steady-state performance analysis based on equivalent circuit.

3L

Impact of rotor resistance of the induction motor torque-speed curve, operation of slip-ring induction motor with external rotor resistance, starting torque, power electronic based rotor side control of slipring motor, slip power recovery.

3L

Module – V: Industrial Applications (2L)

Drive consideration for Textile mills, Steel rolling mills, Cement mills, Paper mills, Machine tools. Cranes & hoist drives.

2L

Paper Name : Utilization of Electric**Power Code:- EE702A****Total Contact Hours: 36****Credit: 4****Branch :EE****Semester : 7th****Course Outcomes (COs):**

EE702A.1.Ability to formulate and then analyze the working of traction motor & their control using mathematical model under loaded and unloaded conditions.

EE702A.2.Ability to understand and explain the principle of operation and performance of traction motor. Skill to analyze the response of d.c. motor, induction motor and transformer.

EE702A.3.Ability to troubleshoot the operation of d.c. motor, induction motor and transformer. Ability to analyze the working of Electric Heating, welding processes.

EE702A.4.Ability to calculate illumination level for a given application and then select the suitable specification for installation.

Detail Syllabus:

Module1:

16L

Electric Traction

Requirement of an ideal traction system, Supply system for electric traction, Train movement (speed time curve,

simplified speed time curve, average speed and schedule speed), Mechanism of train movement (energy consumption, tractive effort during acceleration, tractive effort on a gradient, tractive effort for resistance, power & energy output for the driving axles, factors affecting specific energy consumption, coefficient of adhesion).

Electric traction motor & their control:

Parallel and series operation of Series and Shunt motor with equal and unequal wheel diameter, effect of sudden change of in supply voltage, Temporary interruption of supply, Tractive effort and horse power. Use of AC series motor and Induction motor for traction.

Traction motor control:

DC series motor control, Multiple unit control, Braking of electric motors, Electrolysis by current through earth, current collection in traction system, Power electronic controllers in traction system.

Module2:

08L

Illumination

The nature of radiation, Polar curve, Law of illumination, Photometry (Photovoltaic cell, distribution photometry, integrating sphere, brightness measurement),

Types of Lamps:

Conventional and energy efficient, Basic principle of light control, Different lighting scheme & their design methods, Flood and Street lighting.

Module3:

06L

Electric Heating welding

Types of heating, Resistance heating, Induction heating, Arc furnace, Dielectric heating, Microwave heating.

Module4:

06L

Electrolytic processes

Basic principles, Faraday's law of Electrolysis, Electro deposition, Extraction and refining of Metals, Power supply of Electrolytic processes.

Reference Books:

Generation Distribution and Utilization of Electrical Energy, C.L. Wadhawa, New Age International Publishers.

Art and Science of Utilization of Electrical Energy, H. Partab, Dhanpat Rai & Sons. Utilisation of Electric Energy, E. Openhaw Taylor, Orient Longman.

Paper Name: Advanced Power Electronics

Paper Code: EE702B

Total Contact hours : 36

Credits : 3

Prerequisite : Knowledge in Power Electronics.

Course Objective : After successful completion of this course, the students will be able to understand the concept of different converters, multilevel inverters and compensators.

Course Outcome :

EE702B.1. Describe the basic concepts of resonant converters, matrix converter and multilevel inverter.

EE702B.2. Describe the basic concepts of matrix converter and multilevel inverter.

EE702B.3. Apply the knowledge of contemporary technical issues in Power electronics field and Compensators currently used in modern industries.

Course Contents

Module 1

Advanced Switch Mode Power Converters: Cuk dc-dc converter, Full bridge dc-dc converter, Half-bridge converter, Forward converter, Flyback converter, Push-pull converter, voltage & current mode control of DC-DC converter, SEPIC converter, different protection schemes. 11L

Module 2

Resonant Converters: Introduction, classification of resonant converters, series and parallel resonant inverters, load resonant converters, resonant switch converters, zero voltage and zero current switching resonant converters. 9L

Module 3

Multilevel Inverters: Concept, types of multilevel inverters, diode-clamped, flying-capacitor, and cascaded multilevel inverters, SPWM techniques of multilevel inverter, applications, comparison. 7L

Module 4

FACTS: Principles of shunt and series compensation.

3L Module 5

compensators: TCR, TCS, SVC, TSSC, TCSC, UFC, comparison, Matrix converters: Basic principles and analysis, applications. 6L

Paper Name: Advance Power System

Paper Code: EE703A

Total Contact Hours: 40

Credit: 3

Prerequisite:

Electrical Machines (EE501), Power System I (EE 502), Power System II (EE 602), Control System I (EE503), Control System II (EE 603).

Course Objective: The purpose of this course is to provide advance industry oriented knowledge of power system.

Course outcome:

On successful completion of the learning sessions of the course, the learner will be able to:

EE 703A.1: Acquire in-depth advance knowledge in the domain of modern and industrial oriental power systems.

EE 703A.2: Ability to critically analyze various power systems components, models and their operation, optimization of cost criteria.

EE 703A.3: Ability to apply fundamentals and concepts to analyze, formulate and solve complex problems of electrical power systems and its components and control of frequency and voltages.

EE 703A.4: Ability to use advanced techniques, skills and modern scientific and engineering tools for professional practice for power system to enhanced power quality, Stability, reliability, security and load ability.

Course contents:

MODULE I [6L]

Objectives of Power System Operation

Power Systems in Restructured Environment; Distributed and Dispersed Generation; Environment Aspects of Electric

Power Generation.

MODULE II [10L]

Economic Operation of Energy Generation Systems 10

Generation Cost Curves; Economic Operation of Thermal System; Plant Scheduling; Transmission Loss and Penalty

Factor; Hydro-Thermal Scheduling; Concept of Reserves and Constraints; Unit Commitment

MODULE III [8L]

Automatic Generation Control

Concept of AVR and ALFC Loops, Significance of Double Loop in ALFC; Exciter and VAR Control; Single Area

Load Frequency Control; Two Area Load Frequency Control; Frequency Response.

MODULE IV [8L]

Compensation in Power System

Reactive Power Sensitivity and Voltage Control; Load Compensation with Capacitor Banks; Line

Compensation with Reactors; Shunt and Series Compensation; Fixed Series Capacitors; Thyristor Controlled Series Capacitors (TCSC); Introduction to SVC and STATCOM, UPFC.

MODULE V [8L]

Power System Transients

Types of System Transients; Overvoltage in Transmission Lines; Propagation of Surges and Travelling Waves; Protection against Lightning and Surges;

Text Books

Paper Name: Power Generation and Economics

Paper Code: EE 703B

Total Contact Hours: 40

Credit: 3

Pre requisites:

Concepts of basic electrical engineering, circuit theory and electrical machine.

Course Objective:

The objectives of this course are

To introduce students to different aspects of power generation. • To understand the electrical power plant operation and control with respect to its economic aspect

To familiarize the students to the working of power plants based on different fuels. To expose the students to the principles of safety and environmental issues.

To inculcate research attitude and lifelong learning among graduates.

Course Outcomes:

At the end of the course, a student will be able to:

EE 703B.1. Describe and analyze different types of sources and mathematical expressions related to withpower generation andeconomics.

EE 703B.2. Combine concepts of previously learnt courses to define the working principle of diesel powerplant, its layout, safety principles and compare it with plants of othertypes.

EE 703B.3. Discuss the working principle and basic components of the steam power plants, hydro electric plants, nuclear power plant and the economic principles and safety precautions involved withit.

EE 703B.4. Discuss and analyze the mathematical and working principles of different electricalequipments involved in the generation ofpower

EE 703B.5. Solve the problems related to the economic dispatch of power, plant scheduling, unit commitment and formulate strategies to minimize transmission line losses and penalties imbibed & analyze various power systems components, models and their operation, optimization of cost criteria

EE 703B.6. Use advanced techniques, skills and modern scientific and engineering tools for professional practice for power system to enhanced power quality, reliability, security and loadability.

Course contents:

MODULE I [7L]

Economics of Generation :

Introduction: Energy sources and their availability, Principle types of power plants, their special features and applications, Present status and future trends.

Cost of power generation- Thermal, Hydro and Nuclear. Types of Consumers in a distribution system- Domestic, Commercial, Industrial etc. Concept of load factor, plant capacity factor, plant use factor, diversity factor, demand factor. Choice of size and number of generation units.

MODULE II [8L]

Tariff:-

Block rate, flat rate, two part, maximum demand, Power factor and three part tariffs. Subsidization and Cross subsidization. Availability tariff of generation companies. Pool tariff of transmission companies. Availability based tariff (ABT).

MODULE III [7L]

Unit Commitment:

Constraints in Unit Commitment, Spinning reserve, Thermal unit constraints, Hydro constraints, Must run, Fuel constraints. Unit commitment solution methods,

MODULE IV[10L]

EconomicDispatch:

Transmission loss formulae and its application in economic load scheduling.Computational methods in economic load scheduling.Active and reactive power optimization.

MODULE V [8L]

State Estimation and load forecasting in power system:

Introduction, state estimation methods, concept of load forecasting, load forecasting technique and application in power system.

Text Books:

1. Economic operation of Power System, L.K. Kirchmayar John Wiely,Newyork.
2. Power system Analysis, operation & control, Chakrabarty & Haldar, 2nd edition,PHI.

Name of the Paper: COMPUTER NETWORKING

Paper Code: CS(EE)705C

No. of Lectures: 36

Contact (Periods/Week):=3L/Week

Credit Point: 3

Prerequisite:

Familiarity and knowledge of Operating Systems and Computer Architecture Also require little bit programming languages concepts like C, Java.

Course Objective(s)

To educate basic knowledge of networking technologies and network management concepts To interpret the layering concepts in computer networks.

To analyze the functions of each layer and gain knowledge in different applications that use computer networks.

To emphasize the hand-on experience of network topology in a laboratory environment

To be familiar with contemporary issues in networking technologies.

Course Outcome(s)

CS(EE)705C 1: Understand OSI and TCP/IP models.

CS(EE)705C 2: Analyze MAC layer protocols and LAN technologies. CO3: Design applications using internet protocols.

CS(EE)705C 4: Implement routing and congestion control algorithms.

CS(EE)705C 5: Develop application layer protocols and understand socket programming

Module I: Introduction [6L] Introduction(3L):

Introduction: Computer Network, data communication, topology, OSI & TCP/IP Reference Models, layers and characteristics, Wireless Network, comparison to wired and wireless network.

Physical Layer: [3L]

Overview of data (analog & digital), signal (analog & digital), transmission (analog & digital) & transmission media (guided & unguided); Circuit switching: time division & space division switch, TDM bus; Telephone Network;

Module II: Data Link Layer [10L]

Framing, Error Control, Error Detection and Correction, Flow Control, Data Link Protocols, Simple Stop-and-Wait Protocol, ARQ mechanism, Sliding Window Protocols, One-Bit Sliding Window Protocol, Go-Back-N and Selective Repeat, HDLC, PPP Medium Access Control Sub-layer, The Channel Allocation. [5L]

Multiple Access Protocols : ALOHA, Carrier Sense Multiple Access Protocols, IEEE 802.x Ethernet, Switched Ethernet, Fast Ethernet, Gigabit Ethernet, 10 Gigabit Ethernet, Wireless LANs - IEEE 802.xx , Bluetooth, RFID, Bridges, Virtual LANs, Switching.[5L]

Module III: Network Layer [10L]

IP Addressing, IPv4 and IPv6. Difference IPv4 and IPv6, Conversion of IPv4 and IPv6 , Subnetting, Supernetting, Design Issues, Store-and-Forward Packet Switching, Virtual-Circuit and Datagram Networks, ARP, IP, ICMP, IPV6, BOOTP and DHCP–Delivery protocols Other Protocols such as mobile IP in wireless Network.. [5L]

Routing: Shortest Path Algorithms, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing, Broadcast Routing, Multicast Routing, Anycast Routing, : RIP, OSPF, BGP; Routing for Mobile Hosts. [5L]

Module IV: Transport layer: [6L]

Process to Process delivery; UDP; TCP, SCTP, TCP RENO, TCP/IP in Wireless environment, Congestion control in TCP :Congestion Control: Open Loop, Closed Loop choke packets; Quality of service: techniques to improve QoS: Leaky bucket algorithm, Token bucket algorithm. [5L]

Advanced topic such as Remote Procedure Call, Delay Tolerant Networks.[1L]

Module V: Application Layer [4L]

Introduction to DNS, SMTP, SNMP, FTP, HTTP & WWW: Cryptography (Public, Private Key based), Digital Signature, Firewalls

Module VI: Socket Programming [2L]

Introduction to Socket Programming, UDP socket and TCP Socket

Text books:

PAPER NAME: DATABASE MANAGEMENT SYSTEM

PAPER CODE: CS(EE)705D

Contact: 3L

Credits: 3

Prerequisite:

1. Logic of programming language
2. Basic concepts of data structure and algorithms

Course Objectives

1. To learn the data models, conceptualize and depict a database system
2. To design system using E-R diagram.
3. To learn SQL & relational database design.
4. To understand the internal storage structures using different file and indexing techniques.
5. To know the concepts of transaction processing, concurrency control techniques and recovery procedure.

Course Outcomes(COs)

On completion of the course students will be able to

CS(EE)705D .1. Apply the knowledge of Entity Relationship (E-R) diagram for an application.

CS(EE)705D .2. Create a normalized relational database model

CS(EE)705D .3. Analyze real world queries to generate reports from it.

CS(EE)705D .4. Determine whether the transaction satisfies the ACID properties.

CS(EE)705D .5. Create and maintain the database of an organization.

Module 1:

Introduction [3L]

Concept & Overview of DBMS, Data Models, Database Languages, Database Administrator, Database Users, Three Schema architecture of DBMS.

Module 2:

Entity-Relationship and Relational Database Model [11L]

Basic concepts, Design Issues, Mapping Constraints, Keys, Entity-Relationship Diagram, Weak Entity Sets, Extended E-R features, case study on E-R Model. Structure of relational Databases, Relational Algebra, Relational Calculus, Extended Relational Algebra Operations, Views, Modifications Of the Database.

Module 3:

SQL and Integrity Constraints [6L]

Concept of DDL, DML, DCL. Basic Structure, Set operations, Aggregate Functions, Null Values, Domain Constraints, Referential Integrity Constraints, assertions, views, Nested

Subqueries, Database security application development using SQL, Stored procedures and triggers.

Module 4:

Relational Database Design [8L]

Functional Dependency, Different anomalies in designing a Database., Normalization using functional dependencies, Decomposition, Boyce-Codd Normal Form, 3NF, Normalization using multi-valued dependencies, 4NF, 5NF , Case Study

Module 5:

Internals of RDBMS [9L]

Physical data structures, Query optimization: join algorithm, statistics and cost based optimization. Transaction processing, Concurrency control and Recovery Management: transaction model properties, state serializability, lock based protocols; two phase locking, Dead Lock handling

Module 6:

File Organization & Index Structures [6L]

File & Record Concept, Placing file records on Disk, Fixed and Variable sized Records, Types of Single-Level Index (primary, secondary, clustering), Multilevel Indexes

Text Books:

1. Henry F. Korth and Silberschatz Abraham, "Database System Concepts", Mc.GrawHill.

Paper Name: VALUE AND ETHICS IN PROFESSION

Paper Code: HU 702

Total Contact Hours: 24

Credit: 2

Pre requisites:

Course Objective: To create awareness on professional ethics and Human Values

Course Outcome:

On Completion of this course student will be able to

| | |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------|
| HU 702.1 | Understand the core values that shape the ethical behavior of an engineer and Exposed awareness on professional ethics and human values. |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------|

| | |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HU 702.2 | Understand the basic perception of profession, professional ethics, various moral issues & uses of ethical theories |
| HU 702.3 | Understand various social issues, industrial standards, code of ethics and role of professional ethics in engineering field |
| HU 702.4 | Aware of responsibilities of an engineer for safety and risk benefit analysis, professional rights and responsibilities of an engineer. |
| HU 702.5 | Acquire knowledge about various roles of engineers in variety of global issues and able to apply ethical principles to resolve situations that arise in their professional lives |

Course contents:

Module: 1. Introduction: Definition of Ethics; Approaches to Ethics: Psychological, Philosophical, Social.

Module: 2. Psycho-social theories of moral development: View of Kohlberg; Morality and Ideology, Culture and Morality, Morality in everyday Context.

Module: 3. Ethical Concerns: Work Ethics and Work Values, Business Ethics, Human values in organizations: Values Crisis in contemporary society Nature of values: Value Spectrum of a good life.

Module: 4. Ethics of Profession:

Engineering profession: Ethical issues in Engineering practice, Conflicts between business demands and professional ideals. Social and ethical responsibilities of Technologists. Codes of professional ethics. Whistle blowing and beyond, Case studies.

Module: 5. Self Development: Character strengths and virtues, Emotional Intelligence, Social intelligence, Positive cognitive states and processes (Self-efficacy, Empathy, Gratitude, Compassion, and Forgiveness).

Module: 6. Effects of Technological Growth:

Rapid Technological growth and depletion of resources, Reports of the Club of Rome. Limits of growth: sustainable development Energy Crisis: Renewable Energy Resources, Environmental degradation and pollution. Eco-friendly Technologies. Environmental Regulations, Environmental Ethics Appropriate Technology, Movement of Schumacher; Problems of man, machine, interaction.

Paper Name: ELECTRIC DRIVES LAB

Paper Code: EE791

Total Contact Hours: 30

Credit: 3

Pre requisites:

Concept of Electrical Machines and Power Electronics.

Course Objective:

1. Provide knowledge to operate electrical machines for a specific drive.
2. Study the speed control techniques of electrical machines for particular drive requirement.

Course Outcomes:

| | | |
|-----------|---------|-----------------------------------------------------------------------------------------------------|
| Applying | EE791.1 | Student will be able to apply power electronic converters for motor speed control |
| Analyzing | EE791.2 | Student will be able to analyze the characteristics of electric motors for different type of loads. |

Course contents:

1. Study of thyristor controlled DC Drive.
2. Study of Chopper fed DC Drive
3. Study of AC Single phase motor-speed control using TRIAC.
4. PWM Inverter fed 3 phase Induction Motor control using PSPICE / MATLAB / PSIM Software.
5. VSI fed Induction motor Drive analysis using MATLAB/DSPICE/PSIM Software.
6. CSI fed Induction motor Drive analysis using MATLAB/DSPICE/PSIM Software.
6. Study of V/f control operation of 3F induction motor drive.
7. Study of permanent magnet synchronous motor drive fed by PWM Inverter using Software.
8. Regenerative / Dynamic braking operation for DC Motor - Study using software.
9. Regenerative / Dynamic braking operation of AC motor - study using software.
10. PC/PLC based AC/DC motor control operation.

Name of the Paper: COMPUTER NETWORKING**Lab Paper Code: EE795C****Contact (Periods/Week):=3L/Week****Credit Point: 2****No. of Lectures: 36****Prerequisite:**

Familiarity and knowledge of Computer Network and Computer Architecture

Also require strong knowledge of programming languages like C, Java and UNIX or Linux environment.

CourseObjectives:

To provide students with an overview of the concepts and fundamentals of data communication and computernetworks

To familiarize with the basic taxonomy and terminology of computer networking area. 3

To experience the designing and managing of communication protocols while getting a good exposure to the TCP/IP protocol suite

Course Outcome(s)

EE795C 1: Demonstrate the socket program using TCP &UDP. CO2: Develop simple applications using TCP &UDP.

EE795C2: Develop the code for Data link layer protocol simulation. CO4: Examine the performances of Routing protocol.

EE795C3: Experiment with congestion control algorithm using network simulator
Syllabus

Familiarization of UNIX or Linux environment, UNIX or Linux general Commands specially Network Commands. Familiarization of Internetworking - Network Cables - Color coding - Crimping.

Internetworking Operating Systems - Configurations. [6L] Implementation of flow control mechanisms [3L]

Socket Programming using TCP and UDP [15L] Implementing routing protocols such as RIP, OSPF. [2L]

Familiarization of advanced simulators like Packet Tracer, NS2/NS3, OMNET++, TinyOS[4L] Server Configuration: only web server (If time permit..instructor can do more than that) [6L]

Text books:

TCP sockets in C programs-Practical guide for Programmers By Micheal J Donahoo and Kenneth L calvert.

Socket Programming by rajkumar Buyaa.

PAPER NAME: DATABASE MANAGEMENT SYSTEM LAB**PAPER CODE: CS(EE)795D****Contact: 3P****Credits: 2****Prerequisite:**

1. Logic of programming language
2. Basic concepts of data structure and algorithms

Course Objectives

1. To learn the data models, conceptualize and depict a database system
2. To learn the fundamental concepts of SQL queries.
3. To understand the concept of designing a database with the necessary attributes.
4. To know the methodology of Accessing, Modifying and Updating data & information from the relational databases
5. To learn database design as well as to design user interface and how to connect with database.

Course Outcome(s)

On completion of the course students will be able to

CS(EE)795D 1. Understand the basic concepts regarding database, know about query processing and techniques involved in query optimization and understand the concepts of database transaction and related database facilities including concurrency control, backup and recovery.

CS(EE)795D 2. Understand the introductory concepts of some advanced topics in data management like distributed databases, data warehousing, deductive databases and be aware of some advanced databases like partial multimedia and mobile databases.

CS(EE)795D 3. Differentiate between DBMS and advanced DBMS and use of advanced database concepts and become proficient in creating database queries.

CS(EE)795D 4. Analyze database system concepts and apply normalization to the database.

CS(EE)795D 5. Apply and create different transaction processing and concurrency control applications.

- Structured Query Language
- 1. Creating Database Creating a Database
Creating a Table Specifying Relational Data Types Specifying Constraints
Creating Indexes
- 2. Table and Record Handling INSERT statement
Using SELECT and INSERT together DELETE, UPDATE, TRUNCATE
statements DROP, ALTER statements
- 3. Retrieving Data from a Database The SELECT statement
Using the WHERE clause
Using Logical Operators in the WHERE clause
Using IN, BETWEEN, LIKE, ORDER BY, GROUP BY and HAVING Clause
Using Aggregate Functions
Combining Tables Using JOINS Sub-queries
- 4. Database Management Creating Views
Creating Column Aliases
Creating Database Users Using GRANT and REVOKE
- PL/SQL
- Database design using E-R model and Normalization
- Design and implementation of some on line system [Library Management System]

Text Book:

- 1) SQL, PL/SQL by Ivan Bayross, BPB Publications
- 2) Oracle PL/SQL Programming, 6th Edition - O'Reilly Media By Steven Feuerstein, Bill Pribyl

Course Name: HVDC TRANSMISSION

Course Code: EE-801A

Course Credit: 3

Total Contact Hours: 40

Contact Hour: 3L

Prerequisite: Concept of Power System & Power Electronics.

Course Objective:

The objectives of this course are

Ability to understand the concept of HVDC Transmission system.

Ability to familiarize the students with the HVDC converters and their control system.

Ability to expose the students to the harmonics and faults occur in the system and their prevention. Ability to understand Multiterminal HVDC and FACTS Devices.

Course Outcome:

On successful completion of the learning sessions of the course, the learner will be able to:

EE-801A.1: Acquire knowledge of HVDC transmission and HVDC converters and the applicability and advantage of HVDC transmission over conventional AC transmission.

EE-801A.2: Formulate and solve mathematical problems related to rectifier and inverter control methods and learn about different control schemes as well as starting and stopping of DC links.

EE-801A.3: Analyze the different harmonics generated by the converters and their variation with the change in firing angles.

EE-801A.4: Study and understand the nature of faults happening on both the AC and DC sides of the converters and formulate protection schemes for the same.

EE-801A.5: Understand the existing HVDC systems along with MTDC systems and modern transmission system.

Course contents:**MODULE I[4L]**

Introduction: Introduction of DC power transmission technology, comparison of AC and DC transmission, limitation of HVDC transmission, reliability of HVDC systems, application of DC transmission, description of DC transmission system, planning for HVDC transmission, modern trends in DC transmission.

MODULE II [6L]

Analysis of HDVC converters: Choice of converter configuration, simplified analysis of Graetz circuit, converter bridge characteristics, Characteristics of a twelve pulse converter, detailed analysis of converters.

MODULE III [8L]

Control of HVDC converter and systems: Necessity of control of a DC link, rectifier control, compounding of rectifiers, power reversal of DC link, voltage dependent current order limit(VDCOL) characteristics of the converter, inverter extinction angle control, pulse phase control, starting and stopping of DC link, constant power control, control scheme of HVDC converters.

MODULE IV [10L]

Harmonics and filters: Generation of harmonics by converters, characteristics of harmonics on DC side, characteristics of current harmonics, characteristic variation of harmonic currents with variation of firing angle and overlap angle, effect of control mode on harmonics, non characteristic harmonic. Harmonic model and equivalent circuit, use of filter, filter configuration, design of band-pass and high pass filter, protection of filters, DC filters, power line communication and RI noise, filters with voltage source converter HDVC schemes.

MODULE V [4L]

Fault and protection schemes in HVDC systems: Nature and types of faults, faults on AC side of the converter stations, converter faults, fault on DC side of the systems, protection against over currents and over voltages, protection of filter units.

MODULE VI [8L]

Multiterminal HVDC systems: Types of multiterminal (MTDC) systems, parallel operation aspect of MTDC Series and shunt devices and principle of operation and control, UPFC and IPFC, modeling of FACTS devices for power system studies.

Text Books:

Paper Name: Energy management & audit

Paper Code: EE801B

Total Contact Hours: 40

Credits: 3

Pre requisites:

Power System I .Power System II, Control

System I ,Control System II **Course**

Objective:

The objectives of this course are

EE801B .1: Ability to identify the energy management skills and strategies in the energy managementsystem.

EE801B .2: Ability to understand various energy conservation methods useful in a particularindustry.

EE801B .3: Ability to select appropriate energy conservation method for the critical areaidentified.

EE801B .4: Ability to prepare a energy auditreport.

Course Outcome :

On completion of the course students will be able to

1. Identify the demand supply gap of energy in Indian scenario
2. Carry out energy audit of an industry/Organization.
3. Draw the energy flow diagram of an industry and identify the energy wasted or a wastestream.
4. Select appropriate energy conservation method to reduce the wastage of energy.
5. Evaluate the techno economic feasibility of the energy conservation technique adopted.

Course contents:

Module 1(5L)

Energy Management & Audit:

Definition, Energy audit- need, Types of energy audit, Energy management (audit) approach- understanding energy costs, Bench marking, Energy performance, Matching energy use to requirement, Maximizing system efficiencies, Optimizing the input energy requirements, Fuel and energy substitution, Energy audit instruments and intervals of EA regulation. General Principles of Energy Management.

Energy Management Skills, Energy Management Strategy. Economics of implementation of energy optimization projects, it's constraints, barriers and limitations, Financial Analysis: Simple Payback, IRR, NPV, Discounted Cashflow. Case studies of implemented energy cost optimization projects in electrical utilities as well as thermal utilities

Module 2(5L)

Commercial and Non-Commercial Energy, Primary Energy Resources, Commercial Energy Production, Final Energy Consumption, Energy Needs of Growing Economy, Long Term Energy Scenario, Energy Pricing, Energy Sector Reforms, Concept of smart grid, Tariff.

Module 3(5L)

Energy Conservation Act-2001 and related policies:

Energy Conservation Act-2001 and its features, Notification Under the act,

Designated agencies, Schemes of Bureau of Energy Efficiency(BEE)-ECBC, S & L, DSM, BLY, SME's, Designated Consumers, Electricity Act 2003, Integrated Energy Policy

Module 4(6L)

Energy Efficiency and Climatechanges:

Energy and environment, Air pollution, Climate change, United Nations Framework Convention on climate change (UNFCCC), Kyoto Protocol, Clean Development Mechanism (CDM), CDMmethodology and Procedures, Sustainabledevelopment.

Module 5 (5L)

Non-Conventional Energy Sources:

Concept of renewable Energy and importance, Different types of renewable Energy, Solar energy, Wind energy, Biomass energy, Hydro-energy, Fuel cells, Energy from wastes, Wave, Tidal and geothermal.
Concept of energy storing device.

Module 6 (6L)

Energy Efficient Technologies in Electrical Systems:

Maximum demand controllers, Automatic power factor controllers, Energy efficient motors, Soft starters with energy saver, Variable speed drives, Energy efficient transformers, Electronic ballast, Occupancy sensors, Energy efficient lighting controls, Energy saving potential of each technology

Module 7(8L)

Electrical Distribution and Utilization:

Electrical Systems, Transformers loss reductions, parallel operations, T & D losses, P.F. improvements, Demand Side management (DSM), Load Management, Harmonics & its improvements, Energy efficient motors and Soft starters, Automatic power factor Controllers, Variable speed drivers, Electronic Lighting ballasts for Lighting, LED Lighting, Trends and Approaches. Study of 4 to 6 cases of Electrical Energy audit and management (Power factor improvement, Electric motors, Fans and blowers, Cooling Towers, Industrial/Commercial Lighting system, etc.)

Paper Name: Sensors and Transducers Paper

Code: EE802A

Contact periods/week): 3L

Credit point: 3

Total number of lectures: 32

Course Objective:

To deals with various types of Sensors & Transducers and their working principle.

To deal with Resistive, Capacitive and Inductive transducers.

To deals with some temperature transducers.

To know the overview of miscellaneous sensors.

Course Outcome:

EE802A.1: Students should be able to illustrate the fundamental principles of various types of sensors.

EE802A.2: Students should be able to compare the different types of transducers available.

EE802A.3: Students should be familiar with criteria to recommend appropriate sensors to perform engineering tasks and scientific researches.

EE802A.4: Students will be able to understand the design of different Sensors.

Module I:

Introduction to Sensors and Transducers

Introduction to sensors and transducers, Measurement system, Principles of sensing & transduction, Classification of sensors

Resistive Sensing Element

Potentiometer: Loading effect, Strain gauge: theory, types, temperature compensation, and applications: force, velocity and torque measurements.

Inductive Sensing Element

Self-inductive transducer, Mutual inductive transducers, Variable Reluctance type, Linear Variable Differential Transformer (LVDT): construction,

Characteristic Curve, application: LVDT Accelerometer, LVDT displacement sensors
12L

Module II:

Capacitive Sensing Element

Capacitive transducer: Variable Area Type, Variable distance type , Variable Permittivity type, calculation of sensitivities, applications.

Piezoelectric & Piezoresistive Sensing Element

Piezoelectric effects, charge and voltage coefficients, crystal model, materials, natural and synthetic types
– their comparison, force and stress sensing, piezoelectric accelerometer, piezoresistive sensor.

Temperature Sensing Element

Material expansion type: solid, liquid, gas and vapour Resistance change type: RTD, materials, construction, tip sensitive and stem sensitive type, Thermister materials, shapes, ranges, accuracy specifications. Thermocouple: types, thermoelectric powers, general consideration, Thermopile.

12L

Module III:

Magnetic Sensors

Sensors based on Villari effect for assessment of force, torque, rpm meters, Hall effect and Hall drive, performance characteristics

Miscellaneous Sensors

Optical sensors: Light Dependent Resistor, Optocoupler, solar cell, Geiger counters, Scintillation detectors, Tachometers: Stroboscopes, Encoders, seismic accelerometer, Measurement of vibration, Proximity switches, Load cell, Introduction to Smart sensors and Sensor network.

Paper Name: PROCESS CONTROL AND INSTRUMENTATION

Code: EE802B

Contact: 3L Credits: 3

Total Number of Lectures: 33

Prerequisite:

Knowledge of Control Theory

Course Objective:

This course helps the student

1. To have a knowledge on basic process control loop & characteristics
2. To understand the different controllers mode
3. To know about methods of tuning of controllers
4. To have a knowledge of final control element & different actuators
5. To apply the knowledge of Cascade, Ratio, Feed forward control to control a complicated process
6. To provide knowledge levels needed for PLC programming and operating.

Course Outcome:

Upon successful completion of the course students will be able to:

EE802B.1 Design controller by applying the knowledge of different control action

EE802B.2 Calculate controller parameters by applying different tuning methods

EE802B.3 Describe different advanced control strategy

EE802B.4 State the operation and use of final control element

EE802B.5 Develop ladder diagram

Module I: [10]

General Review of Process, Process Control and Automation. Servo and Regulatory Control, Basic process Control loop block diagram. Characteristic parameters of a process – Process Quantity, Process Potential, Process Resistance, Process Capacitance, Process Lag, Self Regulation

Characteristics and functions of different modes of control actions : Schemes and analysis of On-Off, Multistep, Floating, Time Proportional, Proportional, Integral, Derivative, PI, PD & PID control Electronic PID controller design Pneumatic Controllers - brief analysis

Module II:[5]

Process Reaction Curves, Controllability - using (i) deviation reduction factors (ii) gain bandwidth product, State Controllability

Tuning of Controllers : both Closed and Open loop methods (Ziegler – Nichols, Cohen – Coon, PRC method and 3-C method of parameter adjustment)

Module III:[10]

Different control strategies - schemes, brief analysis and uses

(i) Ratio control (ii) Cascade control (iii) Feed forward control (iv) Multivariable control

Final Control Element: Actuators (Pneumatic Actuators, Electrical Actuators) and Control Valves (Globe, Ball, Butterfly, Gate, Pinch), Different Parts, Fail Position, Valve characteristics, Cv, Single & Double Seated Valves, Valve sizing, Valve selection, Cavitation, Flashing, Noise

Control Valve Accessories – Air Filter Regulator, I/P Converter

Brief study of Safety Valves and Solenoid valves

Module IV:[8]

Introduction to Programmable Logic Controllers – Basic Architecture and Functions; Input-Output Modules and Interfacing; CPU and Memory; Relays, Timers, Counters and their uses; PLC Programming and Applications.

Introduction to DCS

Books:

- 1) D. Patranabis, Principles of Process Control, TMH , New Delhi, 2ndEd.
- 2) D. P. Eckman, Automatic Process control, John Wiley, NewYork
- 3) Surekha Bhanot, Process Control Principal & Application ,Oxford
- 4) B. W. Bequette, Process Control – Modeling, Design and Simulation, PHI
- 5) D. R. Coughanowr, Process Systems Analysis and Control, McGrawHill
- 6) G. Stephanopoulos, Chemical process Control, PHI
- 7) C. D. Johnson, Process Control Instrumentation Technology, PHI
- 8) B. G. Liptak, Instrument Engineers Handbook, Chilton Book Co., Philadelphia

Paper name: INDUSTRIAL & FINANCIAL MANAGEMENT

Code: HU805

Contact: 3L +1T Credits: 4

Total Number of Lectures: 39

Course Outcomes: At the end of the course, the student will be able to

HU805.1. Explain and describe various technology-based business models and the dynamics of Value creation, value proposition, and value capture in industrial enterprises.

HU805.2. Select, interpret and use different costing techniques as a basis for decisions in various Business situations.

HU805.3. Understand the basic principles of financial accounting and reporting.

HU805.4. Explain how the industrial company markets and price its products considering GST.

Course Structure and Syllabus:

| Syllabus Content | |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Module 1 | |
| [12L] | Introduction to Accounting a) Important Definitions b) Basic concepts and conventions c) Types of Accounts with Golden Rule of Accounting d) Journal, Ledger and Trial Balance e) Preparation of Trading Account, Profit & Loss A/C and Balance Sheet for business organizations. |
| Module 2 | |

| | |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 3L] | <p>Financial Management</p> <p>Introduction to Financial Management</p> <p>Introduction, Definition and concept, scope, objective, functions of Finance Manager.</p> <p>Ratio Analysis: a) Definition, Objectives, Advantages & Disadvantages.</p> <p>b) Classification of Ratios: Liquidity ratios, Capital Structure ratios, Activity ratios & Profitability Ratios</p> <p>Capital Budgeting: Nature of Investment Decision, Importance of Capital Budgeting, capital budgeting process, Investment criteria, payback period, Rate of return, cash flow, discounting cash flow NPV method and IRR method, Benefit cost ratio, ARR.</p> |
| Module 3 | |
| [8L] | <p>Cost Accounting: a) Introduction to cost accounting-Cost Centre, Cost unit, Elements of costs b) Statement of cost or cost sheet</p> <p>c) Marginal cost & C-V-P analysis with BEC.</p> <p>Budget and Budgetary Control: Concepts of Budget, Budgeting and budgetary control, advantages, disadvantages, uses, Master Budget, Zero Based Budget, Cash budget, Flexible budget.</p> |
| Module 4 | |
| [6L] | <p>Working capital management</p> <p>Introduction-working capital concept-financing working capital-importance of working capital-management of working capital-working capital cycle-management of different components of working capital-working capital forecast.</p> |
