

Department of Computer Science & Engineering

Curriculum Structure

1st Semester to 8th Semester

(Effective from 2021-22 Admission Batch)

Curriculum for B.Tech. under Autonomy Computer Science & Engineering

L – Lecture; T- Tutorial; P- Practical [1L=1Cr, 1T=1Cr, 1P =0.5 Cr]

**** MOOCS COURSES for HONOURS/MINOR Degree are Program specific and to be taken from MOOCS BASKET**

<u>1ST Year 1st Semester: 1st Semester</u>								
Sl. No	Category	Course Code	Course Title	Hours per week				Credits

COURSE NAME: PHYSICS –I
COURSE CODE: PH 101
CONTACT: 3:0:0
TOTAL CONTACT HOURS: 36
CREDIT: 3

Prerequisites: Knowledge of Physics up to 12th standard.

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to:

PH101.1: Describe various types mechanical resonance and its electrical equivalence

PH101.2: Explain basic principles of Laser, Optical fibers and various types of semiconductors

PH101.3: Apply superposition to explain interference and diffraction as well as apply wave mechanics for attainment of Heisenberg's uncertainty principle

PH101.4: Analyze importance of light as a carrier of information and examine different crystallographic structures according to their co-ordination number and packing factors

PH101.5: Justify the need of quantum mechanics as remedy to overcome limitations imposed by classical physics.

Course Content:

Module 1 (5L): -

Waves & Oscillations: -

Simple Harmonic Motion (Recap), superposition of waves, damped harmonic motion-over damped, critically damped and under damped motion, energy decay, logarithmic decrement, force vibration and resonance (amplitude, velocity resonance), sharpness of resonance, quality factor, related numerical problems. 5L

Module 2 (12L): -

Classical Optics:

2.01- Interference of light: Huygens's principle, conditions of sustained interference, classification of interference, Newton's ring (qualitative descriptions of working principles and procedures-no deduction required). Engineering applications, related numerical problems.4L

2.02-Diffraction of light: Fresnel and Fraunhofer class, Fraunhofer diffraction of a single slit, double slit, multiple slits, intensity distributions, missing order, Rayleigh criterion (no deduction) and resolving power of grating and microscope (no deduction), related numerical problems. 4L

2.03-Polarization: Definition, Plane of polarization, Plane of vibration, Malus Law, Fundamental concepts of plane, circular & elliptical polarizations (only qualitative idea) with examples, Brewster's law, Double refraction: Ordinary & Extra ordinary rays, positive and negative crystal, Nicol's prism, Numerical problems 4L

Module 3 (8L): -

Quantum Mechanics-I

3.01 Quantum Theory: Inadequacy of classical physics-concept of quantization of energy, particle concept of electromagnetic wave (example: photoelectric and Compton Effect; no

derivation required, origin of modified and unmodified lines), wave particle duality; phase velocity and group velocity; de Broglie hypothesis; Davisson and Germer experiment. 4L

3.02 Quantum Mechanics 1: Concept of wave function, physical significance of wave function, probability interpretation; normalization of wave functions; uncertainty principle, relevant numerical problems. Introduction of Schrödinger wave equation (only statement). 4L

Module 4 (3L): -

Solid State Physics-I:

4.01 Crystal Structure: Structure of solids, amorphous and crystalline solids (definition and examples), lattice, basis, unit cell, Fundamental types of lattices –Bravais lattice, simple cubic, fcc and bcc lattices, Miller indices and miller planes, co-ordination number and atomic packing factor, Bragg's equation, applications, numerical problems. 3L

Module 5 (8L):

Modern Optics-I:

5.01- Laser: Concepts of various emission and absorption processes, Einstein A and B coefficients and equations, working principle of laser, metastable state, population inversion, condition necessary for active laser action, optical resonator, illustrations of Ruby laser, He-Ne laser, Semiconductor laser, applications of laser, related numerical problems. 5L

5.02-Fibre Optics-Principle and propagation of light in optical fibres (Step index, Graded index, single and multiple modes) - Numerical aperture and Acceptance angle, Basic concept of losses in optical fibre, related numerical problems. 3L

Recommended Text Books for Physics I (PH 101):

Waves & Oscillations:

1. Sound-N. K. Bajaj (TMH)
2. Advanced Acoustics-D. P. Roy Chowdhury (Chayan Publisher)
3. Principles of Acoustics-B.Ghosh (Sridhar Publisher)
4. A text book of sound-M. Ghosh (S. Chand publishers)
5. A text book of Light- K.G. Mazumder &Ghosh's, (Book & Allied Publisher)
6. Physics of Oscillations and Waves- R.P. Singh
7. College Physics Vol. II - A.B. Gupta
8. Vibration, Waves and Acoustics- Chattopadhyay and Rakshit

Classical & Modern Optics:

1. A text book of Light- K.G. Mazumder &B.Ghoshs (Book & Allied Publisher)
2. A text book of Light-Brijlal&Subhramanium, (S. Chand publishers)
3. Modern Optics-A. B. Gupta (Book& Allied Publisher)
4. Optics-Ajay Ghatak (TMH)
5. Optics-Hecht
6. Optics-R. Kar, Books Applied Publishers
7. PhysicalOptics Möler
8. Optics -F.A. Jenkins and H.E White

Quantum Mechanics-I

1. Introduction to Quantum Mechanics-S. N. Ghoshal (Calcutta Book House)
2. Quantum Mechanics-Bagde and Singh (S. Chand Publishers)
3. Perspective of Quantum Mechanics-S. P. Kuilla (New Central Book Agency)

4. Quantum Mechanics-Binayak Datta Roy (S. Chand Publishers)
5. Quantum Mechanics-Bransden (Pearson Education Ltd.)
6. Perspective of Modern Physics-A. Beiser (TMH)
7. Quantum mechanics -A.K. Ghatak and S Lokenathan
8. Modern Physics -E.E. Anderson
9. Physics Volume 2 -Haliday, Resnick & Krane, Published by Wiley India

Solid State Physics-I:

1. Solid state physics-Puri & Babbar (S. Chand publishers)
2. Materials Science & Engineering-Kakani Kakani
3. Solid state physics- S. O. Pillai
4. Introduction to solid state physics-Kittel (TMH)
5. Solid State Physics and Electronics-A. B. Gupta and Nurul Islam (Book & Allied Publisher)
6. Problem in Solid state physics -S.O. Pillai (a. b.)

Text Books:

1. Refresher courses in physics (Vol. 1, Vol. 2 & Vol. 3)-C. L. Arora (S. Chand Publishers)
2. Basic Engineering Physics-Amal Chakraborty (Chaya Prakashani Pvt. Ltd.)
3. Perspective & Concept of Modern Physics -Arthur Baiser
4. Principles of engineering physics – Md. N Khan and S Panigrahi.
5. Basic Engineering Physics-Sujoy Bhattacharya, Saumen Pal (MG)
6. Engineering Physics (Vol. 1, Vol. 2)-S.P. Kuila(S. Chand Publishers)
7. Engineering Physics-A. S. Vasudeva

**Total marks of the questions set from each module should be in proportion to the number of lectures allotted.

Project Domains

1. Study of Superposition of waves: Lissajous figures.
2. Electrical analogue of mechanical vibrations: application to electrical circuit (LC and LCR circuits), Electrical and mechanical impedance, quality factor, complex representation, and phasor diagram.
3. Study of N-slit diffractions
4. Optical Fiber & its applications: Study of losses, estimation of numerical aperture in practical problems.
5. Photonic nature of electromagnetic waves
6. Optical Rotation

COURSE NAME: MATHEMATICS-I

COURSE CODE: M 101

CONTACT: 3:1:0

TOTAL CONTACT HOURS: 48

CREDITS: 4

Prerequisite: The students to whom this course will be offered must have the concept of (10+2) standard matrix algebra, calculus, and vector algebra.

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to:

M101.1: Recall the distinctive characteristics of matrix algebra, differential calculus, integral calculus, and vector analysis.

M101.2: Understand the theoretical working of matrix algebra, differential calculus, integral calculus, and vector analysis.

M101.3: Apply the principles of matrix algebra, differential calculus, integral calculus, and vector analysis for the solutions of the problems.

M101.4: Analyse the application of matrix algebra, differential calculus, integral calculus, and vector analysis.

M101.5: Evaluate the result for application to the problems on matrix algebra, differential calculus, integral calculus, and vector analysis.

Course Content:

Module I: Matrix Algebra

11L

Echelon form and Normal (Canonical) form of a matrix; Inverse and rank of a matrix; Consistency and inconsistency of system of linear equations, Solution of system of linear equations; Eigen values and eigenvectors; Diagonalization of matrices; Cayley-Hamilton theorem.

Module II: Differential Calculus and Infinite Series

10L

Rolle's Theorem, Mean value theorems, Taylor's, and Maclaurin theorems with remainders; Concept of sequence and series, Tests for convergence of infinite series: Comparison test, D'Alembert's ratio test, Raabe's test, Cauchy's root test, Leibnitz's Test, Power series; Taylor's series, Series for exponential, trigonometric and logarithm functions.

Module III: Multivariable Calculus (Differentiation)

13L

Function of several variables, Concept of limit, continuity, and differentiability; Partial derivatives, Total derivative, and its application; Chain rules, Derivatives of implicit functions Euler's theorem on homogeneous function, Jacobian. Maxima and minima of functions of two variables, Method of Lagrange multipliers.

Module IV: Multivariable Calculus (Integration)

6L

Line Integral, Double Integral, Triple Integral, change of order in multiple integrals, Change of variables in multiple integrals.

Module V: Vector Calculus

8L

Gradient, Directional derivatives, Divergence, Curl, vector line integrals, vector surface integrals, vector volume integrals, Green's theorem, Gauss divergence theorem and Stokes' theorem.

Project Domain:

1. Study on eigenvalues and eigenvectors.
2. Study on convergence of infinite series.
3. Application of partial derivatives.
4. Application of vector calculus
5. Application of integral calculus.

COURSE NAME: PROFESSIONAL COMMUNICATION

COURSE CODE: HSMC 101

CONTACT: 2:0:0

TOTAL CONTACT HOURS: 24

CREDITS: 2

Pre-requisites: Basic (10+2) level of knowledge of English grammar, vocabulary reading and writing skills.

Course Outcomes:

By pursuing this course the students shall be able to:

HSMC101.1: Define, identify and describe the basics of communication theory and its application.

HSMC101.2: Recognize, recall and make use of English vocabulary and its varied usage

HSMC101.3: Develop and apply reading and writing skills in an academic and global business context

HSMC101.4: Identify, explain and use the grammatical structures and forms in English.

HSMC101.5: Analyze, classify and elaborate on the forms and formats of business writing.

Course Content:

Module-1: Verbal and Non-verbal communication

4L

1.1: Definition, Relevance and Effective Usage

1.2: Components of Verbal Communication: Written and Oral Communication

1.3: Components of Non-verbal Communication: Kinesics, Proxemics, Chronemics, Haptics Paralanguage

1.4: Barriers to Effective Communication

Module- 2: Social Communication Essentials and Cross-Cultural Communication

6L

2.1: Communication in Society and the Workplace

2.2: Greetings, Courtesies and Socially Useful Language

2.3: Cultural Contexts: High Context and Low Context Cultures

2.4: Understanding Cultural Nuances and Stereotyping

2.5: Achieving Culturally Neutral Communication in Speech and Writing

Module- 3: Meetings

4L

3.1: Meetings: Nature and Types

3.2: Conducting Meetings: Organization and Procedures

3.3: Meeting Coordination: Roles of Chairpersons and Members

3.4: Notice and Agenda for a Meeting

3.5: Preparing the Minutes of a Meeting (MOM)

Module- 4: Report Writing

4L

4.1: Nature and Function of Reports

4.2: Types of Reports

4.3: Researching for a Business Report

4.4: Format, Language and Style

4.5: Report Documentation

Module 5: Employment Communication**6L**

- 5.1: Writing Business Letters- (Enquiry, Order, Sales, Complaint, Adjustment, Job Application, Offer)
- 5.2: Preparing a CV or Résumé
- 5.3: Creating a Digital/Online Profile – LinkedIn (Résumé/Video Profile)
- 5.4: Writing E-mails: types, convention, and etiquette
- 5.5: Memo, Notices and Circulars
- 5.6: Writing Technicalities—Paragraphing, Sentence Structure and Punctuation

Text Books&Reference Books:

PAPER NAME: PHYSICS I LAB

PAPER CODE: PH 191

CONTACT HOURS: 0:0:3

CREDIT: 1.5

Prerequisites: Knowledge of Physics up to 12th standard.

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to:

PH191.1: Demonstrate experiments allied to their theoretical concepts

PH191.2: Conduct experiments using LASER, Optical fibre, Torsion pendulum, Spectrometer

PH191.3: Participate as an individual, and as a member or leader in groups in laboratory sessions actively

PH191.4: Analyse experimental data from graphical representations, and to communicate effectively them in Laboratory reports including innovative experiments

General idea about Measurements and Errors (One Mandatory):

- i) Error estimation using Slide calliper's/ Screw-gauge/travelling microscope for one experiment.
- ii) Proportional error calculation using Carrey Foster Bridge.

Any 6 to be performed from the following experiments

Experiments on Waves & Oscillations:

1. Study of Torsional oscillation of Torsional pendulum & determination of time using various load of the oscillator.
2. Determination of elastic moduli of different materials (Young's modulus /Rigidity modulus)
3. Determination of Q factor using LCR Circuit.
4. Calibration of an oscillator using Lissajous Figure.

Experiments on Classical Optics:

5. Determination of wavelength of light by Newton's ring method.
6. Determination of wavelength of light by Laser diffraction method.
7. To determine the angle of optical rotation of a polar solution using polarimeter

Experiments on Quantum Physics-I:

8. Determination of Planck's constant using photoelectric cell.
9. Verification of Bohr's atomic orbital theory through Frank-Hertz experiment.
10. Determination of Stefan's Constant

****In addition, it is recommended that each student should carry out at least one experiment beyond the syllabus/one experiment as Innovative experiment**

Probable experiments beyond the syllabus:

1. Determination of wavelength of light by Fresnel's bi-prism method (beyond the syllabus).
3. Study of dispersive power of material of a prism.
4. Study of viscosity using Poiseuille's capillary flow method/using Stoke's law.
5. Measurement of nodal and antipodal points along transmission wire and measurement of wavelength.

6. Any other experiment related to the theory.

Recommended Text Books for Physics I Lab (PH 291):

Waves & Oscillations:

1. Vibration, Waves and Acoustics- Chattopadhyay and Rakshit

Classical & Modern Optics:

1. A text book of Light- K.G. Mazumder & B. Ghosh (Book & Allied Publisher)

Quantum Mechanics-I

1. Introduction to Quantum Mechanics-S. N. Ghoshal (Calcutta Book House)

Solid State Physics-I:

1. Solid State Physics and Electronics-A. B. Gupta and Nurul Islam (Book & Allied Publisher)

Text Books:

1. Practical Physics by Chatterjee & Rakshit (Book & Allied Publisher)
2. Practical Physics by K.G. Mazumder (New Central Publishing)
3. Practical Physics by R. K. Kar (Book & Allied Publisher)

COURSE NAME: WORKSHOP/MANUFACTURING PRACTICES

COURSE CODE: ME191

CONTACT: 0:0:3

CREDITS: 1.5

Prerequisite: Higher Secondary with Mathematics, Physics and Chemistry.

Course Outcomes (COs):

On successful completion of the learning sessions of the course, the learner will be able to:

ME192.1: Gain basic knowledge of Workshop Practice and Safety useful for our daily living.

ME192.2: Identify Instruments of a pattern shop like Hand Saw, Jack Plain, Chisels etc. and performing operations like such as Marking, cutting etc. used in manufacturing processes.

ME192.3: Gain knowledge of the various operations in the Fitting Shop using Hack Saw, various files, Scriber, etc. to understand the concept of tolerances applicable in all kinds of manufacturing.

ME192.4: Get hands on practice of in Welding and various machining processes which give a lot of confidence to manufacture physical prototypes in project works..

Course Content:

(i) Theoretical discussion & videos:

3P

1. Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods
2. Fitting operations & power tools
3. Carpentry
4. Welding (arc welding & gas welding), brazing
5. Electrical & Electronics
6. Metal casting
7. CNC machining, Additive manufacturing
8. Plastic moulding& Glass Cutting

(ii) Workshop Practice:

Module 1 - Machine shop

6P

Typical jobs that may be made in this practice module:

- i. To make a pin from a mild steel rod in a lathe.
- ii. To make rectangular and vee slot in a block of cast iron or mild steel in a shaping and / or milling machine.

Module 2 - Fitting shop

6P

Typical jobs that may be made in this practice module:

- i. To make a Gauge from MS plate.

Module 3 - Carpentry

6P

Typical jobs that may be made in this practice module:

- i. To make wooden joints and/or a pattern or like.

Module 4 - Welding shop (Arc welding 3P + gas welding 3P)

3P

Typical jobs that may be made in this practice module:

- i. ARC WELDING (3P): To join two thick (approx 5mm) MS plates by manual metal arcwelding.
- ii. GAS WELDING (3P): To join two thin mild steel plates or sheets by gas welding.

Module 5 - Electrical & Electronics

3P

House wiring, soft Soldering

Module 6 – Smithy

3P

Typical jobs that may be made in this practice module:

- i. A simple job of making a square rod from a round bar or similar.

For further study (Optional)

Module 7 - Casting

3P

Typical jobs that may be made in this practice module:

- i. One/ two green sand moulds to prepare, and a casting be demonstrated.

Module 8 - Plastic moulding& Glass Cutting**3P**

Typical jobs that may be made in this practice module:

- i. For plastic moulding, making at least one simple plastic component should be made.
- ii. At least one sample shape on glass should be made using laser cutting machine.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

COURSE NAME: CHEMISTRY**COURSE CODE: CH 201****CONTACT: 3:0:0****TOTAL CONTACT HOURS: 36****CREDITS: 3****Pre requisites:** A basic knowledge in 10+2 science with chemistry**Course Outcomes:**

On successful completion of the learning sessions of the course, the learner will be able to:

CH201.1: Remember fundamental concepts of Engineering Chemistry and define relevant terminologies.

CH201.2: Understand the principles of thermodynamics, kinetics, and physical properties of molecules.

CH201.3: Apply the basic concept of Organic Chemistry and knowledge of chemical reactions to industries and technical fields.

CH201.4: Analyse and explain the defects in crystalline solids and protective measures of corrosion of metals in the industries.

CH201.5: Assess qualitative and quantitative parameters of applied and industrial chemistry.

Course Content

Module- I: Inorganic Chemistry **9L**

(i) Atomic structure **5L**

Bohr's theory to hydrogen-like atoms and ions; spectrum of hydrogen atom. Quantum numbers, Introduction to the concept of atomic orbitals, diagrams of s, p and d orbitals, Pauli's exclusion principle, Hund's rule, exchange energy, Aufbau principle and its limitation, introduction to Schrodinger equation.

(ii) Periodic properties **4L**

Modern Periodic table, group trends and periodic trends in physical properties: electron affinity, electronegativity, polarizability, oxidation states, effective nuclear charges, penetration of orbitals, variations of s, p and d orbital energies of atoms.

Module II: Physical Chemistry **8L**

(i) Use of free energy in chemical equilibria **6L**

Thermodynamic functions: internal energy, enthalpy, entropy and free energy. 2nd Law of Thermodynamics, Estimations of entropy and free energies, Free energy and emf, Cell potentials, the Nernst equation and applications.

(ii) Real Gases **2L**

Reason for deviation of real gases from ideal behavior, Equations of state of real gases, Vander Waals' equation, pressure & volume correction, validity, critical state of gas.

Module III: Organic Chemistry 8L**(i) Stereochemistry 4L**

Representations of 3 dimensional structures, Chirality, optical activity, isomerism, structural isomerism, stereoisomers, enantiomers, diastereomers, configurations (D,L& cis trans), racemisation.

(ii) Organic reactions 4L

Concepts of inductive effect, resonance, hyperconjugation, introduction to reactions involving substitution, addition, elimination, oxidation (Baeyer villiger oxidation), reduction (Clemmensen reduction, Wolff-Kishner reduction).

Module IV: Industrial Chemistry 8L**(i) Water Hardness, alkalinity, numerical****(ii) Corrosion. 2L**

Types of corrosion: wet & dry, preventive measures

(iii) Polymers 3L

Classification of polymers, conducting polymers, biodegradable polymers

(iv) Synthesis of a commonly used drug molecule. 1L

Paracetamol, Aspirin

Module V: Spectroscopic techniques in Chemistry 3L

Electromagnetic radiation, Principles of spectroscopy, spectrophotometer, infrared spectroscopy, fingerprint region, functional group region, UV-VIS spectroscopy, ^1H Nuclear magnetic resonance spectroscopy, chemical shift.

Textbooks

1. A Text Book of Organic Chemistry, Arun Bahl & Arun Bahl
2. General & Inorganic Chemistry, P.K. Dutt
3. General & Inorganic Chemistry, Vol I, R.P. Sarkar
4. Physical Chemistry, P.C. Rakshit

Reference Books

1. Chemistry: Principles and Applications, by M. J. Sienko and R. A. Plane
2. Fundamentals of Molecular Spectroscopy, by C. N. Banwell
3. Engineering Chemistry (NPTEL Web-book), by B. L. Tembe, Kamaluddin and M. S. Krishnan
4. Physical Chemistry, by P. W. Atkins
5. Organic Chemistry: Structure and Function by K. P. C. Vollhardt and N. E. Schore, 5th Edition <http://bcs.whfreeman.com/vollhardtschore5e/default.asp>

Project Domain

1. Application of Thermodynamics

2. Application of polymers in daily life
3. Nanomaterials and its applications
4. Determination of water quality parameters
5. Electronic storage devices
6. Managing E –wastes
7. Application of chemistry in core engineering
8. Application of spectroscopy in medical field
9. Applications of green chemistry
10. Merits of commercial organic products
11. Bioplastics
12. Any other related topics

COURSE NAME: MATHEMATICS-II

COURSE CODE: M 201

CONTACT: 3:1:0

TOTAL CONTACT HOURS: 48

CREDIT: 4

Prerequisite: The students to whom this course will be offered must have the concept of (10+2) calculus.

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to:

M201.1: Recall the distinctive characteristics of improper integral, Laplace Transform, ordinary differential equation, graph theory.

M201.2: Understand the theoretical working of improper integral, Laplace Transform, ordinary differential equation, graph theory.

M201.3: Apply the principles of improper integral, Laplace Transform, ordinary differential equation, graph theory.

M201.4: Analyse the application of improper integral, Laplace Transform, ordinary differential equation, graph theory.

M201.5: Evaluate the result for application to the problems on improper integral, Laplace Transform, ordinary differential equation, graph theory.

M201.6: Design graph to solve different real-life problems.

Course Content:**Module I: First Order Ordinary Differential Equations (ODE):****10L**

Solution of first order and first-degree ODE: Exact ODE, Rules for finding Integrating factors, Linear ODE, Bernoulli's equation, Solution of first order and higher degree ODE: solvable for p , solvable for y solvable for x and Clairaut's equation.

Module II: Second Order Ordinary Differential Equations (ODE):**10L**

Solution of second order ODE with constant coefficients: C.F. & P.I., Method of variation of parameters, Cauchy-Euler equations, Solution of simultaneous linear ODEs.

Module III: Laplace Transform (LT):**14L**

Improper integrals; Beta and Gamma functions and their properties.

Definition and existence of LT, LT of elementary functions, First and second shifting properties, Change of scale property, LT of $tf(t)$, LT of $\frac{f(t)}{t}$, LT of derivatives of $f(t)$, LT of integral of $f(t)$, Evaluation of improper integrals using LT, LT of periodic and step functions, Inverse LT: Definition and its properties, Convolution theorem (statement only) and its application to the evaluation of inverse LT, Solution of linear ODE with constant coefficients (initial value problem) using LT.

Module IV: Numerical Methods**14L**

Introduction to error analysis, Calculus of finite difference. **Interpolation:** Newton forward and backward interpolation, Lagrange's interpolation, Newton's divided difference interpolation formula. Numerical integration: Trapezoidal rule, Simpson's 1/3 rule, Weddle's rule. Numerical solution of ordinary differential equation: Euler method, Modified Euler method, Fourth order Runge-Kutta method.

Project Domains:

1. Mathematical modeling using ODE.
2. Application of ODE.
3. Application of Laplace Transform in different engineering branches.
4. Application of Numerical Methods in different engineering branches.

Course name: Basic Electrical Engineering

Course code: EE201

Contact: 3:0:0

Total contact hours: 36

Credits: 3

Pre-requisite: Basic 12th standard Physics and Mathematics, Concept of components of electric circuit.

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to:

EE201.1: Understand and analyse basic electric and magnetic circuits.

EE201.2: Understand and analysis the AC single phase and three phase circuit

EE201.3: Understand and analysis of the basic principles of various electrical machines

EE201.4: Apply concepts of AC fundamentals in solving AC network problems

Course Content**Module- I: DC Circuits****8L**

Definition of electric circuit, linear circuit, non-linear circuit, bilateral circuit, unilateral circuit, Dependent source, node, branch, active and passive elements, Kirchhoff 's laws, Source equivalence and conversion, Network Theorems - Superposition Theorem, Thevenin 's Theorem, Norton Theorem, Maximum Power Transfer Theorem, Star-Delta Conversions.

Module- II: AC Fundamentals**8L**

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three phase balanced circuits, voltage and current relations in star and delta connections.

Module- III: Electrical Machines**10L**

Transformer: Magnetic materials, BH characteristics, ideal and practical transformer, equivalent circuit, losses in transformers, regulation, and efficiency. Auto-transformer and three-phase transformer connections.

Rotating Machines - DC Machines: Brief idea on constructional features, classifications, working principle of both motor and generator. Simple problems on Voltage equation. Three-Phase Induction Motor: Basic concept of three phase circuit and production of rotating magnetic field. Working principle of three-phase induction motor and torque-speed characteristics (concept only).

Module- IV: Electrical Installations**3L**

Earthing of Electrical Equipment, ideas of basic components- MCB, MCCB, ELCB, SFU, Megger. Types of Wires and Cables, Earthing.

Module- V: Fundamentals of Power Systems**5L**

Generation of power: Block schematic representation of Thermal and nuclear power plants. Renewable energy sources: solar, wind, tidal and geothermal (Block diagram and working only- No Problems). Power transmission: Typical electrical power transmission scheme-need for high voltage transmission- (Derivation is not needed, No Problems). Power Distribution: substation equipment's, primary and secondary transmission, and distribution systems- feeder, service mains.

Module- VI: Introduction to Control Systems**2L**

Concept control systems, Objectives of control system, Types of control systems, Real examples of control systems.

Text books:

1. P. Kothari & I. J. Nagrath, Basic Electrical Engineering, TMH.
2. V. Mittle & Arvind Mittal, Basic Electrical Engineering, TMH.

Course Name: Programming for Problem Solving**Course Code: CS 201****Contact: 3:0:0****Total Contact Hours: 36****Credits: 3****Prerequisites:** Number system, Boolean Algebra**Course Outcomes:**

On successful completion of the learning sessions of the course, the learner will be able to:

CS201.1: Identify the working principle of input and output devices of Computers memorize the basic terminology used in computer programming.

CS201.2: Express programs in C language and use different data types for writing the programs.

CS201.3: Implement programs using the dynamic behaviour of memory using pointers.

CS201.4: Explain the difference between call by value and call by address.

CS201.5: Write programs using basic data files and developing applications for real world problems

Course Content:**Module-1: Fundamentals of Computer****9L**

History of Computer, Generation of Computer, Classification of Computers, Basic structure of Computer System, Primary & Secondary Memory, Processing Unit, Input & Output devices.

Number System: basic of Binary, Octal, Decimal and Hexadecimal number systems; Representation and interchanging of number in different number systems. Introduction to

complements system, Representation of signed and unsigned numbers in signed magnitude, signed 1's complement system and signed 2's complement system.

Arithmetic– Addition and Subtraction (using 1's complement and 2's complement).

Representation of Characters-ASCII Code

Basics of Compiler, Interpreter and Assembler

Problem solving – Basic concept of Algorithm. Representation of algorithm using flow chart and pseudo code. Some basic examples.

Module-2: Introduction to C Programming 5L

Overview of Procedural vs Structural language; History of C Programming Language.

Variable and Data Types: The C characters identifiers

And keywords, data type & sizes, variable names, declaration, statements.

Operators & Expressions: Arithmetic operators, relational operators, logical operators, increment and decrement operators, bit wise operators, assignment operators, conditional operators, special operators-type conversion, C expressions, precedence and associativity.

Input and Output: Standard input and output, formatted output–print f, formatted input scan f.

Module-3: Branch and Loop 5L

Branching: Concept of Statement and Blocks in C, Simple if, if -else, nested if-else and if-else ladder.

Switch Case: break and continue; switch-case, concept of and labels

Loops - while, for, do while

Module-4: Program Structures 4L

Function: Basics of Functions, function types, function prototypes, formal and actual parameter, function calling, functions returning values, functions not returning values. Recursion and Recursive Function.

Storage Class in C: Storage Class-auto, external, static and register storage class, scope rules and life time of variables

C pre-processor: Pre-processing directive and macro, parameterized macro.

Module-5: Array and Pointer 7L

Arrays: One dimensional array, Two-dimensional arrays, Passing an array to a function

Pointers: Pointers, Pointer and Array, Pointer and functions.

Strings: Character array and string, array of strings, Passing a string to a function, String related functions, Pointer and String.

Dynamic memory allocation: Malloc, calloc, realloc and free with example.

Module-6: Structures, Unions and Enum 3L

Basic of structures, arrays of structures, structures and pointers, bit fields. Basics of union and enum, difference between structure and union.

Module-7: File in C**3L**

Files handling- opening and closing a file in different mode, formatted and unformatted files, Command line arguments, f open, f close, f get c, f put c, f print f, f scan f function.

Textbook:

1. Byron Gottfried, Schaum's Outline of Programming with C, McGraw-Hill
2. Kanetkar Y.-Letus C, BPB Publication, 15th Edition

Reference Books:

1. Brian W. Kernighan and Dennis M. Ritchie, The C Programming Language, Prentice Hall of India
2. K R Venugopal & S R Prasad – MASTERING C, TMH, 2nd Edition

Course Name: Chemistry Lab**Course Code: CH 291****Contact: 0:0:3****Credits: 1.5****Pre-requisite:** A basic knowledge in 10+2 science with chemistry.**Course Outcomes:**

On successful completion of the learning sessions of the course, the learner will be able to:

CH291.1: Operate different types of instruments for estimation of small quantities chemicals used in industries and scientific and technical fields.

CH 291.2: Work as an individual also as a team member

CH 291.3: Analyse different parameters of water considering environmental issues

CH 291.4: Synthesize nano and polymer materials.

CH 291.5: Design innovative experiments applying the fundamentals of chemistry

Course Content:**Choice of 10-12 experiments from the following:**

1. Determination of surface tension and viscosity
2. Thin layer chromatography

3. Determination of hardness of water
 4. Determination of chloride content of water
 5. Determination of the rate constant of a reaction
 6. Determination of cell constant and conduct metric titration
 7. pH metric titrations
 8. Synthesis of a polymer/drug
 9. Saponification/acid value of an oil
 10. Chemical analysis of a salt
- Chemical oscillations- Iodine clock reaction
11. Determination of the partition coefficient of a substance between two immiscible liquids
 12. Adsorption of acetic acid by charcoal
 13. Estimation of iron in Mohr's salt solution by permanganate (Redox Titration)
 14. Innovative experiments (any one)
 - Synthesis of silver nano-particles
 - Green synthesis

COURSE NAME: PROFESSIONAL COMMUNICATION LAB**COURSE CODE: HSMC291****Contact: 0:0:2****CREDIT: 1****Pre requisites:** Basic knowledge of LSRW skills.**Course Outcomes:**

On successful completion of the learning sessions of the course, the learner will be able to:

HU291.1: Listen to and summarize, interpret and explain audio material/data in English**HU291.2:** Understand and implement the basics of note taking of factual data/information in English and keep a laboratory record**HU291.3:** Engage in spoken interaction using needs specific vocabulary, language function and pronunciation in conversations, role plays and group discussions**HU291.4:** Maintain and keep a listening log and write a film review.

Course Content:**Module- 1: Introduction to the Language Lab**

- a. The Need for a Language Laboratory
- b. Tasks in the Lab
- c. Writing a Laboratory Note Book

Module- 2: Active Listening

- a. What is Active Listening?
- b. Listening Sub-Skills—Predicting, Clarifying, Inferencing, Evaluating, Note-taking
- c. Academic Listening vs Business Listening
- d. Listening in Business Telephony
- e. Study of Contextualized Examples based on Lab Recordings

Module- 3: Speaking

- a. Speaking—Accuracy and Fluency Parameters
- b. Pronunciation Guide—Basics of Sound Scripting, Stress, and Intonation
- c. Fluency-focussed activities—JAM, Conversational Role Plays, Speaking using Picture/Audio Visual inputs
- d. Accuracy-focussed activities—Identifying Minimal Pairs, Sound Mazes, Open and Closed Pair Drilling, Student Recordings (using software)
- e. Group Discussion: Principles and Practice
- f. Business Meetings and Sales Talks

Module- 4: Lab Project Work

- a. Making a brief Advertisement video (1-2 minutes)
- b. Making a brief Business Documentary film (5-7 minutes)
- c. Client interaction video (5-7 minutes)
- d. Making a short video CV (1-2 minutes)

COURSE NAME: BASIC ELECTRICAL ENGINEERING LABORATORY**COURSE CODE: EE291****CONTACT: 0:0:3****CREDITS: 1.5**

Prerequisite: Basic Physics and applied physics, Basic Mathematics, Basic concept of Electric Circuit.

Course Outcomes (COs):

On successful completion of the learning sessions of the course, the learner will be able to:

EE291.1: Identify common electrical components and their ratings.

EE291.2: Make Circuit connection by wires of appropriate ratings.

EE291.3: Understand the usage of common electrical measuring instruments

EE291.4: Understand the basic characteristics of transformers and electrical machines

List of Experiments

1. Basic safety precautions – earthing, introduction to measuring instruments – Voltmeter, Ammeter, Multimeter, Wattmeter, Real life Resistor, Capacitor, Inductor.
2. Verification of Thevenin's and Norton's Theorem.
3. Verification of Superposition and Maximum Power Transfer Theorem.
4. Characteristics of Fluorescent, Tungsten and Carbon filament lamps.
5. Study of R-L-C series circuit.
6. Three-phase Power measurement with two wattmeter methods.
7. Demonstration of cut-out sections of machines: DC Machine (commutator-brush arrangement), Induction Machine (squirrel cage rotor).
8. Measurement of primary and secondary voltage and current of single-phase transformer – Open Circuit and Short Circuit Test.
9. Starting, Reversing and speed control of DC shunt motor.
10. Torque-Speed characteristics of DC Machine.
11. Torque-Speed characteristics of Three-phase Induction Motor.
12. Test on single-phase Energy Meter.
13. Innovative experiments

COURSE NAME: ENGINEERING GRAPHICS & DESIGN

COURSE CODE: ME292

CONTACT: 0:0:3

CREDITS: 1.5

Prerequisites: Basic knowledge of geometry

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to:

ME292.1: Learn basics of drafting and use of drafting tools which develops the fundamental skills of industrial drawings.

ME292.2: Know about engineering scales, dimensioning and various geometric curves necessary to understand design of machine elements.

ME292.3: Understand projection of line, surface, and solids to create the knowledge base of orthographic and isometric view of structures and machine parts.

ME292.4: Become familiar with computer aided drafting useful to share the design model to different section of industries as well as for research & development.

List of Drawing:

Traditional Engineering Graphics:

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

Module 1: Introduction to Engineering Drawing

Principles of Engineering Graphics and their significance, Usage of Drawing instruments, lettering, Conic sections including Rectangular Hyperbola (General method only); Cycloid, Epicycloid and Involute; Scales – Plain, Diagonal and Vernier Scales.

Module 2: Orthographic & Isometric Projections

Principles of Orthographic Projections-Conventions - Projections of Points and lines inclined to both planes; Projections of planes on inclined Planes - Auxiliary Planes; Projection of Solids inclined to both the Planes- Auxiliary Views; Isometric Scale, Isometric Views of lines, Planes, Simple and compound Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa.

Module 3: Sections and Sectional Views of Right Angular Solids

Drawing sectional views of solids for Prism, Cylinder, Pyramid, Cone, and project the true shape of the sectioned surface, Auxiliary Views; Development of surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone; Draw sectional orthographic views of objects from industry and dwellings (foundation to slab only).

Computer Graphics:

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling.

Module 4: Overview of Computer Graphics

Demonstration of CAD software [The Menu System, Toolbars (Standard, Properties, Draw, Modify and Dimension), Drawing Area (Background, Crosshairs, Coordinate System), Dialog boxes and windows, Shortcut menus (Button Bars), Zooming methods, Select and erase objects].

Module 5: CAD Drawing, Customization, Annotations, layering

Set up of drawing page including scale settings, ISO, and ANSI standards for dimensioning and tolerance; Using various methods to draw straight lines, circles, applying dimensions and annotations to drawings; Setting up and use of Layers, changing line lengths (extend/lengthen); Drawing sectional views of solids; Drawing annotation, CAD modelling of parts and assemblies with animation, Parametric and nonparametric solid, surface and wireframe modelling, Part editing and printing documents.

Module 6: Demonstration of a simple team design project

Illustrating Geometry and topology of engineered components: creation of engineering models and their presentation in standard 2D blueprint form and as 3D wire-frame and shaded solids; Meshed topologies for engineering analysis and tool-path generation for component manufacture, use of solid-modelling software for creating associative models at the component and assembly levels.

COURSENAME: PROGRAMMING FOR PROBLEM SOLVINGLAB

COURSE CODE: CS 291

CONTACT: 0:0:3

CREDITS: 1.5

Prerequisites: Number system, Boolean Algebra

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to:

CS291.1: Identify the working of different operating systems like DOS, Windows, Linux

CS291.2: Express programs in C language

CS291.3: Implement programs connecting decision structures, loops

CS291.4: Experiment with user defined functions to solve real time problems

CS291.5: Write C programs using Pointers to access arrays, strings, functions, structures, and files

Course Content:

Module-1: Familiarization with some basic commands of DOS and Linux. File handling and Directory structures, file permissions, creating and editing simple C program in different editor and IDE, compilation and execution of C program. Introduction to Code block.

Module-2: Problem based on

- a) Basic data types
- b) Different arithmetic operators.
- c) Print f () and scan f () functions.

Module-3: Problem based on conditional statements using

- a) if-else statements
- b) different relational operators
- c) different logical operators

Module-4: Problem based on

- a) **for** loop
- b) **while** loop
- c) **do-while** loop

Module-5: Problem based on

- a) How to write a menu driven program using **switch-case** statement
- b) How to write a function and passing values to a function
- c) How to write a **recursive function**.

Module-6: Problem based on

- a) How to use **array (both 1-D and 2-D)**.
- b) How to pass an **array** to a **function**.

Module-7: Problem based on manipulation of strings in different way.

Module-8: Problem based on

- a) How to handle compound variables in C
- b) How to handle file in C
- c) How to use command line argument in C

Textbook:

1. Byron Gottfried, Schaum's Outline of Programming with C, McGraw-Hill
2. Kanetkar Y.-Letus C, BPB Publication, 15th Edition

Collective Data from 3rd to 6th Semester (Summer/Winter Training during Semester Break & Internship should be done after 5th Semester or 6th Semester). All related certificates to be collected by the training/internship coordinator(s).

**** MOOCS COURSES for HONOURS/MINOR Degree are Program specific and to be taken from MOOCS BASKET**

Course Name: Discrete Mathematics

Course Code: M301

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Higher Secondary Level Mathematics

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to:

M301.1: Understand and explain the fundamental concepts of Set Theory, Mathematical Logic and Proof Techniques, Theory of Numbers, Algebraic Structures. Graph Theory and its utilitarian importance in computer science for further exploration leading towards lifelong learning.

M301.2: Identify and formulate problems based on Combinatorial Structures, Algebraic Structures, Graph Theory, Recurrence Relation etc.

M301.3: Apply the concepts of Discrete Mathematics to **solve** problems based on Combinatorial Structures, Algebraic Structures, Graph Theory, Recurrence Relation etc.

M301.4: Prove theorems using Proof Techniques and Mathematical Logic Frameworks to justify a claim.

M301.5: Develop ideas for **proposing** solutions to the complex problems of Discrete Mathematics and **analyze** their effectiveness in solving the relevant problems

Course Content:

Module -1: Set Theory [8L]

Set: Operations and Properties of set, Finite Set, Power Set, Cardinality of finite set, Cartesian product, Relation: Types of Relations, Properties of Binary Relation, Equivalence Relation, Partial Ordering Relation and Poset, Lattice. [4L]

Combinatorics and Counting: Sum and product rule, Permutation and Combination Principle of Inclusion Exclusion. Pigeon Hole Principle. [2L]

Generating Functions and Recurrence Relations: Recursively defined relation and functions, Discrete Numeric Function, Growth of Functions, Problems on Recurrence Relations and their solutions using different methods. [2L]

Module-2: Mathematical Logic and Proof Techniques [8L]

Propositional Logic: Basics of Boolean Logic, Idea of Propositional Logic, well-formed formula, Truth tables, Tautology, Satisfiability, Contradiction, Algebra of proposition, Inference theory of Propositional Logic. [3L]

Predicate Logic: Idea of First Order Predicate Logic and Quantifiers, well-formed formula of predicate, Inference theory of Predicate Logic. [3L]

Proof Techniques: Some Terminology, Proof Methods and Strategies, Forward Proof, Proof by Contradiction, Proof by Contraposition, Proof of Necessity and Sufficiency. [2L]

Module-3: Theory of Numbers[4L]

Well-Ordering Principle, Divisibility theory and properties of Divisibility, Fundamental theorem of Arithmetic, Prime and Composite Numbers. [2L]

Greatest Common Divisor and Euclidean Algorithm, Congruence, Residue Classes. [2L]

Module-4: Algebraic Structures [8L]

Concepts of Groups, Subgroups and Order, Cyclic Groups, Cosets, Normal Subgroups, Permutation and Symmetric groups, Group Homomorphisms. [5L]

Elementary properties of Rings and related problems [1L]

Elementary properties of Fields and related problems. [1L]

Elementary properties of Vector Space and related problems. [1L]

Module-5: Graph Theory[8L]

Graph Terminologies and their properties: Degree, Connectivity, Path, Cycle, Sub-Graph, Isomorphism, Eulerian and Hamiltonian Walks, Matrix representation of graphs, Shortest Path in Graph. [2L]

Graph Coloring and Matching: Coloring Vertices and Chromatic Number, Coloring Edges and Total Coloring, Independence and Chromatic Partitioning, Cliques, Perfect Graphs, Bounds on Chromatic Numbers, Chromatic Polynomials, Matching. [3L]

Tree: Rooted Trees, Binary Search Tree and Tree Sorting, Spanning Tree, Weighted Trees and prefix codes. [3L]

Course Name: Analog Electronics

Course Code: ESC301

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite: Concept of basic electronics devices, basic law of circuit analysis

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to:

ESC301.1: Explain the characteristics of diodes and transistors.

ESC301.2: Design and analyze various rectifier and amplifier circuits

ESC301.3: Design sinusoidal and non-sinusoidal oscillators

ESC301.4: Analyse the functioning of OP-AMP and design OP-AMP based circuits

ESC301.4: Design ADC and DAC

Course Content:**Module 1: [4L]**

Small signal amplifiers: Introduction to Analog Integrated Circuits, BJT Modelling-hybrid model of transistors; Emitter follower circuits, High frequency model of transistors. FET Small signal analysis - Source follower

Module 2: [9L]

Transistor Amplifiers: RC coupled amplifier, functions of all components, equivalent circuit, derivation of voltage gain, current gain, input impedance and output impedance, frequency response characteristics, lower and upper half frequencies, bandwidth, anticonception wide band amplifier.

Feedback Amplifiers & Oscillators: Feedback concept, Voltage series-shunt, current series-shunt feedback Configurations, Barkhausen criterion, Colpitts, Hartley's, Phase shift, Wien bridge and crystal oscillators.

Module3:[14L]

Operational Amplifier: Introduction to Integrated Circuits, Differential Amplifier, Constant current source (current mirror etc.), level shifter, CMRR, Open & Closed loop circuits, importance of feedback loop (positive & negative), Block Diagram of OPAMP, IdealOPAMP.

Applications of Operational Amplifiers: analog adder, subtractor, integrator, differentiator, comparator, Schmitt Trigger. Instrumentation Amplifier, Log & Anti-log amplifiers, Analog multiplier, Precision Rectifier, voltage to current and current to voltage converter, free running Multivibrator, zero crossing detector

Multivibrator – Monostable, Bistable, Astable multivibrators ; Monostable and astable operation using 555 timer.

Module 4:[9L]

Large signal Amplifiers: Introduction to power amplifiers (Class A, B, AB)

Power Supply: Analysis for DC voltage and ripple voltage with C, L-C and C-L-C filters in Rectifier Circuit - Regulated DC power supplies- Line regulation, output resistance and temperature coefficient, Series and Shunt Voltage Regulation – percentage regulation, Fixed output voltage IC regulator 78xx and 79xx series, Adjustable output voltage regulator, LM 337 series power supply ICs, Concept of Switched Mode Power Supply`

Text Books:

1. Millman Halkias – Integrated Electronics, McGraw Hill
2. Ramakant A. Gayakwad —Op- Amps and linear Integrated Circuits, Pub: PHI

COURSE NAME: Digital Logic and Electronics**COURSE CODE: ESC302****CREDIT: 3****TOTAL CONTACT HOURS: 36**

Pre-requisite: Basic concepts of Logic gates, Truth Tables, Concept of basic components of a digital computer.

Course Outcomes:

On completion of the course students will be able

ESC302.1: To memorize basic gate operations and laws Boolean algebra.

ESC302.2: To understand basic structure of digital computer, stored program concept and different arithmetic and control unit operations.

ESC302.3: To analyze basic structure of different combinational circuits- multiplexer, decoder, encoder etc.

ESC302.4: To test different operations with sequential circuits.

ESC302.5: To simulate memory and I/O operations.

Course Content:**Module – 1: [8L]**

Binary Number System [1L]; BCD, ASCII, EBDIC, Gray codes and their conversions [1L], Introduction and laws of Boolean algebra [1L], Boolean functions, Minterm and maxterm, Prime implicants, Representation in SOP and POS forms[2L], Minimization of logic expressions by Karnaugh Map and algebraic method [3L]

Module – 2: [8L]**Combinational circuits:**

Adder and Subtractor (half-full adder & subtractor) [2L], Serial & Parallel Adder, Carry look ahead adder and Parity Generator[2L], Encoder, Decoder, Multiplexer [2L], Demultiplexer, Comparator, Code Converters [2L]

Module – 3: [12L]**Sequential Circuits:**

Flip-Flops, SR, JK, Master slave JK, D, T , characteristic Tables , Excitation tables [5L]

Basic concept of Synchronous and Asynchronous counters, Up/Down Counters, Ring counter, Johnson counter, Design of Modulo-N Counter, Counter applications [5L]

Registers (SISO, SIPO, PIPO, PISO) [2L]

Module – 4:[8L]

A/D and D/A conversion techniques – Basic concepts (D/A :R-2-R only [2L] , A/D: successive approximation [2L])

Logic families- TTL, ECL, MOS and CMOS - basic concepts [2L],

Programmable logic Array, programmable Array logic, Sequential Programmable Devices [2L]

COURSE NAME: IT Workshop
COURSE CODE: CS301
CREDITS: 3
TOTAL CONTACT HOURS: 36

Prerequisite: Fundamentals and principles of computer programming

Course Outcome(s):

On completion of the course

CS301.1: Students will be able to identify the fundamental programming concepts and methodologies which are essential to building good C++ programs.

CS301.2: Students will be able to code, document, test, and implement a well-structured, robust computer program using the object oriented programming concepts.

CS301.3: Students will be able to integrate reusable modules using object oriented programming language in C++.

CS301.4 Students will be able to reflect object oriented programming concepts to solve practical problems.

CS301.5: Students will be able to adapt object oriented programming concepts to software problems.

Course Content:

Module 1: [6L]

Object-Oriented Programming Concepts: Introduction, comparison between procedural programming paradigm and object-oriented programming paradigm, basic concepts of object-oriented programming — concepts of an object and a class, interface and implementation of a class, operations on objects, relationship among objects, abstraction, encapsulation, data hiding, inheritance, overloading, polymorphism, messaging. [4]

Standard Input/Output: Concept of streams, hierarchy of console stream classes, input/output using overloaded operators >> and << and member functions of i/o stream classes, formatting output, formatting using ios class functions and flags, formatting using manipulators. [2]

Module 2: [10L]

Classes and Objects: Specifying a class, creating class objects, accessing class members, access specifiers, static members, use of *const* keyword, friends of a class, empty classes, nested classes, local classes, abstract classes, container classes, bit fields and classes. [4]

Constructors and Destructors: Need for constructors and destructors, copy constructor, dynamic constructors, explicit constructors, destructors, constructors and destructors with static members, initializer lists. [2]

Operator Overloading and Type Conversion: Overloading operators, rules for overloading operators, overloading of various operators, type conversion - basic type to class type, class type to basic type, class type to another class type. [4]

Module 3:[2L]

Pointers and Dynamic Memory Management: Declaring and initializing pointers, accessing data through pointers, pointer arithmetic, memory allocation (static and dynamic), dynamic memory management using *new* and *delete* operators, pointer to an object, *this* pointer, pointer related

problems - dangling/wild pointers, null pointer assignment, memory leak and allocation failures. [4]

Module 4: [6L]

Inheritance: Introduction, defining derived classes, forms of inheritance, ambiguity in multiple and

multipath inheritance, virtual base class, object slicing, overriding member functions, object composition and delegation, order of execution of constructors and destructors. [5]

Virtual functions & Polymorphism: Concept of binding - early binding and late binding, virtual functions, pure virtual functions, abstract classes, virtual destructors. [3]

Module 5: [6L]

Exception Handling: Review of traditional error handling, basics of exception handling, exception handling mechanism, throwing mechanism, catching mechanism, rethrowing an exception, specifying exceptions. [2]

Templates and Generic Programming: Template concepts, Function templates, class templates, illustrative examples. [2]

Files: File streams, hierarchy of file stream classes, error handling during file operations, reading/writing of files, accessing records randomly, updating files. [2]

Module 6: [6L]

MATLAB Overview:

Environment, variable, constant, operators, loop, function, MATLAB Toolbox, MATLAB Graphic function, Reading and Writing to file, Numerical simulation.

Suggested Readings/ Books:

1. Lafore R., Object Oriented Programming in C++, Waite Group.
2. E. Balagurusamy, Object Oriented Programming with C++, Tata McGraw Hill.
3. R. S. Salaria, Mastering Object-Oriented Programming with C++, Salaria Publishing House.
4. Bjarne Stroustrup, The C++ Programming Language, Addison Wesley.
5. Herbert Schildt, The Complete Reference to C++ Language, McGraw Hill-Osborne.
6. R. S. Salaria, Test Your Skills in Object-Oriented Programming With C++, Salaria Publishing House.

Paper Name: Data Structures

Paper Code: CS302

Contact Hours/Week: 3L

Credits: 3

Allotted Lectures: 36L

Prerequisite:

1. Familiarity with the fundamentals of C or other programming language
2. A solid background in mathematics, including probability, set theory.

Course Outcomes:

On completion of the course students will be able

CS302.1: To identify how the choices of data structure & algorithm methods impact the performance of program.

CS302.2: To express problems based upon different data structure for writing programs.

CS302.3: To implement programs using appropriate data structure & algorithmic methods for solving problems.

CS302.4: To explain the computational efficiency of the principal algorithms for sorting, searching, and hashing.

CS302.5: To write programs using dynamic and static data structures and building applications for real world problems.

Course Content:

Module 1: Introduction [4L]

Concepts of data and information; Concept of Abstract Data Type, Data Structure and Data Type. Classification of Data Structures- Primitive and Non-Primitive Data Structure, Linear and Non-Linear Data Structure. Need of Data Structures. (1L)

Concept of algorithms and programs, Different methods of representing algorithm; Algorithm analysis, time and space analysis of algorithms – Asymptotic notations like Big Oh (O), Small Oh(o), Big Omega(Ω), Small Omega(ω) and Theta(Θ) notation (definition and significance). (3L)

Module 2: Non-Restricted Linear Data Structure[9L]

List or Linear List: Definition and Example, List as ADT. Representation of Linear List- Sequential Representation and Linked Representation.

Array: Introduction to sequential representation, Linearization of multidimensional array. Application of array- representation of polynomial using array, Representation of Sparse matrix using array.

Linked List: Introduction to linked representation, Implementation of different types of linked list- Singly linked list, Doubly linked list, Circular linked list, Circular Doubly Linked List. Application of Linked list- Representation of polynomial.

Module 3: Restricted Linear Data Structure [6L]

Stack: Definition of Stack, implementations of stack using array and linked list

Applications of stack- infix to postfix conversion, Postfix Evaluation

Recursion: Principles of recursion - use of stack, tail recursion. Tower of Hanoi using recursion.

Queue: Definition of Queue; Implementation of queue using array-physical, linear and circular model; Implementation of queue using linked list.

Deque- Definition and different types of deque.

Module 4: Nonlinear Data structures [9L]

Trees and Binary Tree:

Basic terminologies; Definition of tree and binary tree. Difference between tree and binary tree, Representation of binary tree (using array and linked list)

Binary tree traversal (pre-, in-, post- order); Threaded binary tree- definition, insertion and deletion algorithm; Binary search tree- Definition, insertion, deletion, searching algorithm;

Height balanced binary tree: AVL tree- definition, insertion and deletion with examples only.

m –Way Search Tree: B Tree – Definition, insertion and deletion with examples only; B+ Tree – Definition, insertion and deletion with examples only.

Heap: Definition (min heap and max heap), creation, insertion and deletion algorithm. Application of heap (priority queue and sorting).

Graphs: Definition and representation (adjacency matrix, incidence matrix and adjacency list).

Graph traversal– Depth-first search (DFS), Breadth-first search (BFS) - concepts of edges used in DFS and BFS (tree-edge, back-edge, cross-edge, and forward-edge).

Module 5: Sorting and Searching [8L]

Sorting Algorithms: Definition and need of sorting, different types of sorting algorithm (internal, external, stable, in-place, comparison based); Factors affecting sorting Methods, Bubble sort, Insertion sort, Selection sort, Quick sort, Merge sort, Radix sort – algorithm with analysis (time complexity)

Searching: Factors affecting searching Methods; Sequential search –algorithm with analysis (time complexity); improvement using sentinel.

Binary search and Interpolation Search algorithm with analysis (time complexity)

Hashing: Introduction and purpose of Hashing and Hash functions (division, folding and mid-square), Collision resolution techniques.

Course Name: Universal Human Values 2: Understanding Harmony**Course Code: HSMC 303****Contacts: 3:0:0****Total Contact Hours: 36****Credit: 3****Prerequisite:** None**Course Outcomes:**

After the completion of this lab, students will be able to

HSMC303.1: Develop holistic perspective based on self-exploration about themselves (human being), family, society and nature/existence.**HSMC303.2:** Cultivate the harmony in the human being, family, society and nature/ existence**HSMC303.3:** Strengthen self-reflection.**HSMC303.4:** Build commitment and courage to act.**Course Content:****Module1: Course Introduction-Need, Basic Guidelines, Content and Process for Value Education[8L]**

Self-Exploration–what is it? -Its content and process; ‘Natural Acceptance’ and Experiential Validation-as the process for self-exploration. Continuous Happiness and Prosperity- A look at basic Human Aspirations. Right understanding, Relationship and Physical Facility-the basic requirements for fulfillment of aspirations of every human being with the incorrect priority. Understanding Happiness and Prosperity correctly-A critical appraisal of the current scenario. Method to fulfill the above human aspirations: understanding and living in harmony at various levels. Practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking.

Module2: Understanding Harmony in the Human Being – Harmony in Myself![6L]

Understanding human being as a co-existence of the sentient ‘I’ and the material ‘Body’. Understanding the needs of Self (‘I’) and ‘Body’ - happiness and physical facility.

Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer). Understanding the characteristics and activities of 'I' and harmony in 'I'. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail. Programs to ensure Sanyam and Health. Practice sessions to discuss the role others have played in making material goods available to me. Identifying from one's own life. Differentiate between prosperity and accumulation. Ensuring health vs dealing with disease discussion.

Module 3: Understanding Harmony in the Family and Society- Harmony in Human-Human Relationship [7L]

Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfillment to ensure mutual happiness; Trust and Respect as the foundational values of relationship. Understanding the meaning of Trust; Difference between intention and competence. Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship. Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. Visualizing a universal harmonious order in society – Undivided Society, Universal Order-from family to world family. Practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Elicit examples from students' lives.

Module4: Understanding Harmony in the Nature and Existence-Whole existence as Coexistence[8L]

Understanding the harmony in the Nature. Interconnectedness and mutual fulfillment among the four orders of nature- recyclability and self- regulation in nature. Understanding Existence as Co-existence of mutually interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence. Practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of Technology etc.

Module5: Implications of the above Holistic Understanding of Harmony on Professional Ethics [7L]

Natural acceptance of human values. Definitiveness of Ethical Human Conduct. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order.

Competence in professional ethics:

- a. Ability to utilize the professional competence for augmenting universal human order
- b. Ability to identify the scope and characteristics of people-friendly and eco-friendly production systems,
- c. Ability to identify and develop appropriate technologies and management patterns for above production systems.
- d. Case studies of typical holistic technologies, management models and production systems. Strategy for transition from the present state to Universal Human Order:
- e. At the level of individual: as socially and ecologically responsible engineers, technologists and managers
- f. At the level of society: as mutually enriching institutions and organizations.
- g. Practice Exercises and Case Studies in Practice (tutorial) Sessions to discuss the conduct as an engineer or scientist etc.

Text Books:

1. Human Values and Professional Ethics by RRGaur, RSangal, GPBagaria, Excel Books, New Delhi, 2010

Reference Books

Course Name: Numerical Methods Lab**Course Code: M(CSE)391****Contact: 3****Total Contact Hours: 30****Credits: 2.5****Prerequisite:** Any introductory course on programming language (example. C/ MATLAB).**Course Outcomes:**

On successful completion of the learning sessions of the course, the learner will be able to

M(CSE)391.1 : Understand the theoretical workings of numerical techniques with the help of C/ Matlab.**M(CSE)391.2:** Execute basic command and scripts in a mathematical programming language.**M(CSE)391.3:** Apply the programming skills to solve the problems using multiple numerical approaches.**M(CSE)391.4:** Analyze if the results are reasonable, and then interpret and clearly communicate the results.

Course Content:

1. Assignments on Newton forward /backward, Lagrange's interpolation.
2. Assignments on numerical integration using Trapezoidal rule, Simpson's 1/3 rule, Weddle's rule.
3. Assignments on numerical solution of a system of linear equations using Gauss elimination, Tridiagonal matrix algorithm, Gauss-Seidel iterations. LU Factorization method.
4. Assignments on numerical solution of Algebraic Equation by Bisection method, Regula-Falsi method, Secant Method, Newton-Raphson method
5. Assignments on ordinary differential equation: Euler's method, Euler's modified method, Runge-Kutta methods, Taylor series method and Predictor-Corrector method.
Implementation of numerical methods on computer through C/C++ and commercial Software Packages: Matlab / Scilab / Labview / Mathematica/NAG (Numerical AlgorithmsGroup)/Python.

Course Name: Digital Logic and Electronics Lab**Course Code: ESC392****Credit: 1.5**

Pre-requisite: Basic concepts of Logic gates, Truth Tables, function realization –minimization of Logic expressions by K-map, Concept of basic components of a digital computer, Binary Arithmetic

Course Outcomes:

After the completion of this lab, students will be able

ESC392.1: To remember and understand basic gate operations

ESC392.2: To examine basic structure of digital computer.

ESC392.3: To illustrate basic structure of different digital components - multiplexer, decoder, encoder etc.

ESC392.4: To test different operations with flip-flop.

ESC392.5: To simulate arithmetic and control unit operations.

Course Content:

1. A) Realization of basic gates and universal gates.
- B) Realization of basic gates using universal gates.
2. Design a Half adder and Full Adder circuit using basic gates and verify its output.
3. Design a Half subtractor and Full Subtractor circuit using basic gates and verify its output
4. Design an Adder/Subtractor composite unit.
5. Design of a 'Carry-Look-Ahead' Adder circuit.
6. Realization of a) Encoder, b) Decoder c) Multiplexer , d) De-MUX , e) Comparator and their Truth Table verification.
7. Realization of RS / JK / D flipflops using logic gates.
8. Design of Shift Register using J-K / D Flip Flop.
9. Realization of Synchronous Up/Down counters.
10. Design of MOD- N Counter
11. Study of DAC
12. Study of logic families and PLDs

CO-PO Mapping:

Course Name: IT Workshop Lab (Scilab/MATLAB/C++)**Course Code: CS391****Credits: 3****Prerequisite:** Computer Fundamentals and principles of computer programming**Course Outcomes:**

On successful completion of the learning sessions of the course, the learner will be able to:

CS391.1: Identify the computer programming techniques to solve practical problems.**CS391.2:** Express the concepts and implementation of constructors and destructors.**CS391.3:** Execute software applications using object oriented programming language in C++**CS391.4:** Explain C++ data types, memory allocation/deallocations, functions and pointers..**CS391.5:** Solve object oriented programming concepts to software problems using C++.**Course Content:**

1. Introduction of UNIX/Linux Operating System which includes preliminary commands, start-up & shutdown methodology, file .

2. Handling as well as introduction to editors like Vi editor, introduction to GNU C & C++ compiler, as well as introduction to GNU & GDB script.
3. Introduction to C++, basic loop control, executing programs.
4. Writing functions, selection statements, review of functions and parameters, command line arguments, recursion, I/O streams, arrays and string manipulation, pointers, structures & unions.
5. Object-Oriented Programming in C++, fundamentals of classes, constructors-destructors.
6. Dealing with member functions, operator overloading and polymorphism (both static & dynamic).
7. Dealing with inheritance, derived class handling.
8. Abstract class, virtual class, overriding, template class, name-space & exception handling.
9. Dynamic memory allocation, implementation of Linked Lists, using C++.
10. MATLAB Environment, variable, constant, operators, loop, function.
11. MATLAB Toolbox, MATLAB Graphic function.
12. Reading and Writing to file, Numerical simulation.
13. Innovative experiments/Projects

Course Name: Data Structures Lab

Course Code: CS392

Contact: 0:0:3

Credits: 1.5

Prerequisites: Computer Fundamentals and principal of computer programming Lab

Course Outcomes:

Having successfully completed the course, student will be able

CS392.1: To identify the appropriate data structure as applied to specified problem definition.

CS392.2: To summarize operations like searching, insertion, deletion, traversing mechanism used on various data structures.

CS392.3: To implement practical knowledge of data structures on the applications.

CS392.4: To illustrate how to store, manipulate and arrange data in an efficient manner.

CS392.5: To write programs to access queue and stack using arrays and linked list, binary tree and binary search tree.

Course Content:

Module 1: Implementing Non-Restricted Linear Data Structure [2 Lab]

Problem based on Implementation of Non-Restricted Linear Data Structure like-

Implementation of list as data structure using array.

Implementation of list as data structure using linked list of different types.

Implementation of polynomial as data structure using array and linked list.

Implementation of sparse matrix as data structure using array.

Module 2: Implementing Restricted Linear Data Structure [3 Lab]

Problem based on Implementation of Restricted Linear Data Structure like-

Implementation of stack as data structure using array.

Implementation of stack as data structure using linked list.

Implementation of queue as data structure using array (physical, linear, and circular model).

Implementation of queue as data structure using linked list.

Converting infix to post-fix and evaluating post-fix expression using stack.

Implementing Tower-of-Hanoi problem.

Module 3: Implementing Non-Linear Data Structure [2 Lab]

Problem based on Implementation of Non-Linear Data Structure like

Implementation of Binary Tree as data structure using array and linked list.

Implementation of Binary Search Tree (BST) as data structure using linked list.

Implementation of Heap as data structure using array.

Implementation of Priority Queue as data structure using Heap.

Module 4: Implementing Sorting and Searching algorithm [5 Lab]

Problem based on Implementation of Sorting and Searching algorithm like

Implementation of Bubble sort using appropriate data structure.

Implementation of Selection sort using appropriate data structure.

Implementation of Insertion sort using appropriate data structure.

Implementation of Quick sort using appropriate data structure.

Implementation of Merge sort using appropriate data structure.

Implementation of Heap sort using appropriate data structure.

Implementation of Radix sort using appropriate data structure.

Implementation of Sequential Search using appropriate data structure.

Implementation of Binary Search using appropriate data structure.

Implementation of hashing with collision resolution using linear and quadratic probing.

Course Name: Environmental Science

Course Code: MC 301

Credits: 0

Total Lectures: 36

Course Outcome(s):

After completion of the course students will be able to

CO1: To understand the natural environment and its relationships with human activities.

CO2: To apply the fundamental knowledge of science and engineering to assess environmental and health risk.

CO3: To develop guidelines and procedures for health and safety issues obeying the environmental laws and regulations.

CO4: Acquire skills for scientific problem-solving related to air, water, noise & land pollution.

Course Contents:

Module 1: General [11L]

Natural Resources: Forest Resource, water resource, mineral resource, energy resources: alternative source of energy

Population Growth: Exponential Growth, logistic growth, Maximum sustainable yield, demography

Disaster Management: Types of disasters (Natural & Man-made), Floods, Earthquake, Tsunamis, Cyclones, landslides (cause, effect & control)

Ecology & Ecosystem: Elements of ecology, definition of ecosystem- components types and function, Food chain & Food web, Structure and function of the following ecosystem: Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems

Environmental Management: Environmental impact assessment, Environmental laws and protection act of India(The Environment protection Act, Air pollution Act, Water Act, Wildlife Protection Act) , Hazardous waste(management and Handling) Rules.

Module 2: Air pollution and control [10L]

Sources of Pollutants: point sources, nonpoint sources and manmade sources primary & secondary pollutant

Types of air pollutants: primary & secondary pollutant ; Suspended particulate matter, oxides of carbon, oxides of nitrogen, oxides of sulphur, particulate, PAN, Smog (Photochemical smog and London smog),

Effects on human health & climate: Greenhouse effect, Global Warming, Acid rain, Ozone Layer Depletion

Air pollution and meteorology: Ambient Lapse Rate, Adiabatic Lapse Rate, Atmospheric stability & Temperature inversion control of air pollution (ESP, cyclone separator, bag house, catalytic converter, scrubber (century)).

Module 3: Water Pollution [9L]

Classification of water (Ground & surface water)

Pollutants of water, their origin and effects: Oxygen demanding wastes, pathogens, nutrients, Salts, heavy metals, pesticides, volatile organic compounds.

Surface water quality parameters: pH, DO, 5 day BOD test, BOD reaction rate constants, COD. Numerical related to BOD

Lake: Eutrophication [Definition, source and effect].

Ground water: Aquifers, hydraulic gradient, ground water flow (Definition only),ground water pollution (Arsenic & Fluoride; sources, effects, control)

Quality of Boiler fed water: DO, hardness, alkalinity, TDS and Chloride

Layout of waste water treatment plant (scheme only).

Module 4: Land Pollution [3L]

Types of Solid Waste: Municipal, industrial, commercial, agricultural, domestic, hazardous solid wastes (bio-medical), E-waste

Solid waste disposal method: Open dumping, Land filling, incineration, composting, recycling (Advantages and disadvantages).

Waste management: waste classification, waste segregation, treatment & disposal

Module 5: Noise Pollution [3L]

Definition of noise, effect of noise pollution on human health, Average Noise level of some common noise sources

Definition of noise frequency, noise pressure, noise intensity, noise threshold limit value, equivalent noise level, L_{10} (18 hr Index) .Noise pollution control.

Collective Data from 3rd to 6th Semester (Summer/Winter Training during Semester Break & Internship should be done after 5th Semester or 6th Semester). All related certificates to be collected by the training/internship coordinator(s).

**** MOOCS COURSES for HONOURS/MINOR Degree are Program specific and to be taken from MOOCS BASKET**

Course Name: Computer Organization and Architecture

Course Code: CS401

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite: Digital Electronics

Course Outcomes

On successful completion of the learning sessions of the course, the learner will be able

CS401.1: To understand basic structure of digital computer, stored program concept and instruction format.

CS401.2: To describe the Implementation of Arithmetic and logical operation representation.

CS401.3: To solve pipelining concepts and parallelism techniques with a prior knowledge of stored program methods.

CS401.4: To solve pipelining concepts and parallelism techniques with a prior knowledge of stored program methods.

CS401.5: To design the SIMD and MIMD architecture and their interconnection techniques.

Course Contents:

Module 1[8L]:

Introduction to CPU and concepts of ALU[2L], Instruction format and Instruction Cycle [1L], Addressing Modes [1L] Fixed-point multiplication -Booth's algorithm. [2L], Fixed-point division - Restoring and non-restoring algorithms [1L], Floating-point number representation-IEEE754 format and Floating-point arithmetic operation [1L]

Module 2 [7L]:

Introduction to basic computer architecture [1L], Stored Program Concepts: Von Neumann & Harvard Architecture [1L], RISC VS CISC [1L], Amdahl's law [1L], Performance measurement parameters – MIPS, MFLOPS, SPEC ratings, CPI etc. [2L] Micro programmed and hardwired control unit [1L]

Module 3[8L]:

Pipelining: Basic concepts, instruction and arithmetic pipeline[2L], data hazards, control hazards and structural hazards, techniques for handling hazards[2L]

Pipeline vs. Parallelism, Levels of parallelism [1L], Instruction-Level Parallelism: Basic Concepts, Techniques for Increasing ILP, Superscalar, Super Pipelined and VLIW Processor Architectures [2L], Array and Vector Processors [1L]

Module 4[9L]:

Introduction to memory-RAM and ROM [1L], Register transfer, memory transfer, Tri-state bus buffer, Memory Hierarchy: Secondary memory [1L], Main Memory [1L], Cache Memory [1L], Mapping Technique in cache memory: Direct, Full Associative and Set Associative [2L], Performance Implementation in Cache Memory [1L], Virtual memory Concepts [1L], page replacement policies [1L].

Module 5[4L]:

Multiprocessor architecture: taxonomy of parallel architectures; Flynn's Classification [1L], Centralized and Shared- memory architecture: synchronization [1L], Interconnection Network (Omega, Baseline, Butterfly, Crossbar) [2L]

Text Books:

1. 'Advanced Computer Architecture Parallelism Scalability Programmability', Tata McGraw-Hill Education Private Limited ISBN-13: 978-0-07-053070-6 ISBN-10: 0-07-053070-X

Course Name: Design & Analysis of Algorithm

Course Code: CS402

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: To know data-structure and basic programming ability

Course Outcomes

On successful completion of the learning sessions of the course, the learner will be able:

CS402.1: To remember the concepts of time and space complexity, worst case, average case and best case complexities and the big-O notation.

CS402.2: To express and develop the concepts to algorithm design.

CS402.3: To analyze the mathematical foundation in analysis of algorithms.

CS402.4: To validate different algorithmic design strategies.

CS402.5: To building the efficiency of algorithms using time and space complexity theory.

Course Content:**Module-1 [4L]**

Algorithm Development & Complexity Analysis: [4L]

Stages of algorithm development for solving a problem: Describing the problem, identifying a suitable technique, Design of an algorithm, Proof of Correctness of the algorithm. Time and Space Complexity, Different Asymptotic notations – their mathematical significance. Solving Recurrences: Substitution Method, Recurrence Tree Method, Master Theorem (Statement Only).

Module-2 [14L]

Algorithm Design Techniques:

Brute force techniques – Travelling Salesman Problem, Divide and Conquer - Matrix multiplication: Strassen's algorithm, Greedy techniques - Fractional Knapsack problem, Job Sequencing with Deadline, Graph Colouring, Finding Minimum Cost Spanning Tree, Dynamic programming - 0/1 Knapsack problem, Matrix chain multiplication, Travelling Salesman Problem, Backtracking-N-Queens Problem, Knights Tour on Chess Board.

Module-3 [3L]

String matching problem:

Different techniques – Naive algorithm, string matching using finite automata, and Knuth, Morris, Pratt (KMP) algorithm with their complexities.

Module-4 [5L]

Graph Algorithms

Single Source Shortest Path – Dijkstra's Algorithm, All pair shortest path – Floyd-Warshall Algorithm. Network Flows, Maximum Flows – Ford-Fulkerson Algorithm, Push Re-label Algorithm, Minimum Cost Flows – Cycle Cancelling Algorithm.

Module-5 [5L]

Complexity Classes:

The Class P, The Class NP, Reducibility and NP-completeness – SAT (without proof), 3-SAT, Vertex Cover, Independent Set, Maximum Clique.

Module-6 [5L]

Approximation and Randomized Algorithms [3L]

Approximation Algorithms - The set-covering problem – Vertex cover, K-centre clustering.

Randomized Algorithms - The hiring problem, Finding the global Minimum.

Recent Trends [2L]

Text book:

1. "Introduction to Algorithms" by Cormen, Leiserson, Rivest, Stein.
 2. "The Design and Analysis of Computer Algorithms" by Aho, Hopcroft, Ullman.
 3. "Algorithm Design" by Kleinberg and Tardos.
 3. Design & Analysis of Algorithms, Gajendra Sharma, Khanna Publishing House, New Delhi
- Reference Books:
4. "Design Analysis and Algorithms" by Hari Mohan Pandey.

Paper Name: Operating System**Paper Code: CS403****Contact Hours/Week: 3****Credit: 3****Total Contact Hours: 36L****Prerequisites:**

1. Computer organization
2. Computer Architecture
3. Data Structures
4. Algorithms & Programming Concept

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able

CS403.1: To define how computing resources such as CPU, memory and I/O are managed by the operating system.

CS403.2: To categorize kernel and user mode in an operating system.

CS403.3: To implement different CPU scheduling problem to achieve specific scheduling criteria.

CS403.4: To explain the knowledge of process management, synchronization, deadlock to solve basic problems.

CS403.5: To evaluate appropriate design choices when solving real-world problems.

Course Content**Module – 1: [3L]**

Functionalities of Operating System, Evolution of Operating System.

Types of Operating System: batch, multi-programmed, time-sharing, real-time, distributed, parallel, Structural overview, Protection & Security. [3L]

Module – 2: [11L]

Processes: Concept of processes, process states, PCB, process scheduling, co-operating processes, independent process, suspended process, Interaction between processes and OS, Inter-process communication: Message passing. [3L]

Threads: overview, benefits of threads, user and kernel level threads, Thread models. [2L]

CPU scheduling: Scheduling criteria, pre-emptive & non-pre-emptive scheduling, scheduling algorithms (FCFS, SJF, SRTF, RR, priority, multilevel queue, multilevel feedback queue scheduling). [6L]

Module – 3:[11L]

Process Synchronization: background, critical section problem, synchronization hardware, classical problems of synchronization (producer-consumer, readers-writer, dining philosophers, etc), semaphores, monitors.

[6L]

Deadlocks: deadlock characterization, methods for handling deadlocks, deadlock prevention, deadlock avoidance, deadlock detection, recovery from deadlock.[5L]

Module 4:[6L]

Background, logical vs. physical address space, swapping, contiguous memory allocation, paging, Segmentation, TLB. [3L]

Virtual Memory: background, demand paging, page replacement algorithms (FCFS, LRU, Optimal), thrashing, Working set model. [3L]

Module 5:[5L]

Disk structure, disk scheduling (FCFS, SSTF, SCAN, C-SCAN, LOOK, C-LOOK etc), disk reliability, disk formatting, boot block, bad blocks. [2L]

File: File concept, access methods, directory structure, file system structure, UNIX file structure, allocation methods (contiguous, linked, indexed), free-space management (bit vector). [2L]

I/O: I/O hardware, polling, interrupts, DMA, caching, buffering, blocking-non blocking I/O.[1L]

Course Name: Formal Language and Automata Theory

Course Code: CS404

Contacts:3:0:0

Total Contact Hours: 36

Credits:3

Prerequisites:

1. Digital Logic
2. Computer organization
3. Computer Fundamentals

Course Outcomes

On successful completion of the learning sessions of the course, the learner will be able:

CS404.1: To acquire the knowledge of the basics of state machines with or without output and its different classifications

CS404.2: To summarize synchronous sequential circuits as the foundation of digital system.

CS404.3: To implement different techniques of designing grammars and recognizers for several programming languages.

CS404.4: To measure Turing's Hypothesis as a foreword to algorithms.

CS404.5: To assess the power and limitation of a computer, and take decisions on computability.

Course Contents:

Module-1:[9L]

Fundamentals: Basic definition of sequential circuit, block diagram, mathematical representation, concept of transition table and transition diagram,[1L]

Introduction to Finite State Model (FSM), Design of sequence detector, Finite State Machine, Finite Automata, Deterministic Finite Automation (DFA) and Non-deterministic Finite Automation (NFA), Transition diagrams, Transition tables and Language recognizers.[3L]

NFA with empty transitions, Equivalence between NFA with and without empty transitions. NFA to DFA conversion.[2L]

Minimization of FSM: Minimization Algorithm for DFA, Introduction to Myhill-Nerode Theorem [2L]

Limitations of FSM, Application of Finite Automata[1L]

Module-2:[7L]

Finite Automata with output – Moore & Mealy machine. Representation of Moore & Mealy Machine, Processing of the String through Moore & Mealy Machine, Equivalence of Moore & Mealy Machine –Inter-conversion.[2L]

Equivalent states and Distinguishable States, Equivalence and k-equivalence, Minimization of Mealy Machine[1L]

Minimization of incompletely specified machine–Merger Graph, Merger Table, Compatibility Graph [2L]

Lossless and Lossy Machine–TestingTable,TestingGraph [2L]

Module-3:[5L]

Regular Languages, Regular Sets, Regular Expressions, Algebraic Rules for Regular

Expressions, Arden's Theorem statement and proof[1L]
 Constructing Finite Automata (FA) for given regular expressions, Regular string accepted by FA [2L]
 Constructing Regular Expression for given Finite Automata [1L]
 Pumping Lemma of Regular Sets. Closure properties of regular sets [1L]

Module-4:[9L]

Grammar Formalism-Context

Free Grammars, Derivation trees, sentential forms. Rightmost and leftmost derivation of strings, Parse Tree, Ambiguity in context free grammars. [1L]

Minimization of Context Free Grammars. [1L], Removal of null and unit production [1L]

Chomsky normal form and Greibach normal form. [1L]

Pumping Lemma for Context Free Languages. [1L]

Enumeration of properties of CFL, Closure property of CFL, Ogden's lemma & its applications [1L],

Regular grammars—right linear and left linear grammars [1L]

Pushdown Automata: Pushdown automata, definition. Introduction to DCFL, DPDA, NCFL, NPDA [1L]

Acceptance of CFL, Acceptance by final state and acceptance by empty state and its equivalence. [1L]

Equivalence of CFL and PDA, inter-conversion. [1L]

Module-5:[5L]

Turing Machine: Turing Machine, definition, model [1L]

Design of TM, Computable functions [1L], Church's hypothesis, counter machine [1L] Types of Turing machines [1L]

Universal Turing Machine, Halting problem [1L]

Textbook:

1. "Introduction to Automata Theory Language and Computation", Hopcroft H.E. and Ullman J.D., Pearson Education.

Reference Books:

Course Name: Gender, Culture and Development

Course Code: HSMC 402

Contacts: 2:0:0

Total Contact Hours: 24

Credit: 2

Prerequisite: None

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to:

HSMC402.1: Provide an analysis of the location of women in the processes of economic development; to understand what economic development is, the scales or levels at which it occurs, and the centrality of gender at every level.

HSMC402.2: Examine theoretical and conceptual frameworks for that analysis.

HSMC402.3: Reflect upon linkages between the global economy and the gendered macro and micro process of development and transitions from 'government' to 'governance.'

HSMC402.4: Explain the usefulness of a rights based approach to gender justice.

HSMC402.5: Provide basis for research, practical action and policy formulation and or evaluating for evaluating directions and strategies for social change from a gender perspective.

Course Content:

Module1:

Introduction to Gender, Definition of Gender, Basic Gender Concepts and Terminology, Exploring Attitudes towards Gender, Social Construction of Gender .[4L]

Module 2:

Gender Roles and Relations, Types of Gender Roles, Gender Roles and Relationships Matrix, Gender-based Division and Valuation of Labour .[6L]

Module 3:

Gender Development Issues , Identifying Gender Issues, Gender Sensitive Language, Gender, Governance and Sustainable Development, Gender and Human Rights, Gender and Mainstreaming. [5L]

Module 4:

Gender-based Violence, The concept of violence, Types of Gender-based violence, The relationship between gender, development and violence, Gender-based violence from a human rights perspective. [5L]

Module5:

Gender and Culture Gender and Film, Gender and Electronic Media, Gender and Advertisement, Gender and Popular Literature. [4L]

Text Books:

1. Beneria, Lourdes. (2004). Gender, Development, and Globalization: Economics as if All People Mattered. Routledge Press. (GDGE)
2. Molyneux and Razavi. (2002). Gender Justice, Development and Rights. Oxford

Course Name: Probability and Statistics

Course Code: BSC 401

Total Contact Hours: 36

Credit: 3

Prerequisite:

The students to whom this course will be offered must have the concept of (10+2) standard algebra and calculus.

Course Outcome(s):

After completion of the course students will be able to

BSC401.1: Recall the distinctive principles of probability and statistics.

BSC401.2: Understand the theoretical workings of theory of probability and tests of hypotheses.

BSC401.3: Apply statistical methods to compute and explain point estimators and interval estimators for mean, variance and proportion.

BSC401.4: Analyze statistical data from engineering experiments.

Course Content

Module1 (Probability and Random Variables) (15 Hours)

The axioms of probability, Conditional probability, Baye's theorem, Discrete and continuous random variables, probability mass, probability density and cumulative distribution functions, mathematical expectation, Moments, Moment generating functions, Binomial, Poisson, Geometric, Uniform, Exponential and Normal distributions.

Module 2 (Two dimensional random variables) (5 Hours)

Joint distributions, Marginal and conditional distributions, Covariance , Correlation and linear regression , Transformation of random variables , Central limit theorem (for independent and identically distributed random variables).

Module 3 (Sampling Distribution) (3 Hours)

Distributions of the sample mean and the sample variance for a normal population, Chi-Square, t and F distributions, problems

Module 4 (Estimation) (4 Hours)

Unbiasedness, consistency, the method of moments and the method of maximum likelihood estimation, confidence intervals for parameters in one sample and two sample problems of normal populations, confidence intervals for proportions, problems

Module 5 (Testing of Hypotheses) (9 Hours)

Null and alternative hypotheses, the critical and acceptance regions, two types of error, power of the test, the most powerful test and Neyman-Pearson Fundamental Lemma, tests for one sample and two sample problems for normal populations, tests for proportions, Chi square goodness of fit test and its applications, problems.

Project Domains:

1. Construction of Univariate and Bivariate frequency tables
2. Diagrammatic and Graphical representation of data.
3. Fitting of discrete and Continuous distributions
4. Regression Analysis
5. Curve Fitting
6. Tests of significance with regard to Single Mean, Two Means
7. Construction of Confidence intervals for Mean, Variance and Proportion

Course Name: Design & Analysis of Algorithm Lab

Course Code:CS492

Contact: 0:0:2

Credit: 1.5

Prerequisite:Programming knowledge

Course Outcomes

On successful completion of the learning sessions of the course, the learner will be able

CS492.1: To define and demonstrate the correctness of the basic algorithms for those classic problems in various domains.

CS492.2: To express and develop methods for analyzing the efficiency and correctness of algorithms.

CS492.3: To experiment the dynamic programming, greedy method, Backtracking, Branch and Bound strategy, and recite algorithms that employ this strategy.

CS492.4: To explain the performances of all algorithms.

CS492.5: To experiment and simulate criteria and specifications appropriate to new problems.

Course Content:

- A. Implementation of various Divide & Conquer Methods; viz. Matrix Multiplication.
- B. Implementations of various Dynamic Programming Methods, viz. Matrix Chain Multiplication Method, Travelling Salesman Problem etc.
- C. Implementations of various Brunch & Bound Techniques, viz.
- D. Implementations of various Backtracking Methods, viz. n-Queen Problem.
- E. Implementations of Greedy Method, viz. Fractional Knapsack Problem, Job Sequencing Problem etc.
- F. Implementations of String Matching Algorithm viz. Naïve Algorithm, String Matching with Finite Automata etc.
- G. Implementations of Various Graph Algorithm, viz. Dijkstra's Algorithm, Floyd Algorithm etc.
- H. Implementation of some Real-Life Trendy Problems.

CS492. 5	2	2	3	3	3	-	-	-	-	-	-	-	3	1	1

Paper Name: Operating Systems Lab

Code: CS493

Allotted hours: 36L

Prerequisites:

1. Computer organization
2. Computer Architecture
3. Data Structures
4. Algorithms & Programming Concept

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to

CS493.1: Analyze different aspects of Linux.

CS493.2: Create or design different scripts using shell programming.

CS493.3: Implement process, thread, and semaphore concept of operating system.

CS493.4: Create shared memory with the implementation of reading from, write into shared memory.

Course Contents:

1. **Essential Linux Commands[9P]:** Commands for files and directories cd, cp, mv, rm, mkdir, more, less, creating and viewing files, using cat, file comparisons, View files, kill, ps, who, sleep, grep, fgrep, find, sort, cal, banner, touch, file related commands – ws, sat, cut, grep etc. Mathematical commands –expr, factor, units, Pipes(use functions pipe, popen, pclose), named Pipes (FIFOs, accessing FIFO).
2. **Shell Programming [6P]:** Creating a script, making a script executable, shell syntax (variables, conditions, control structures, functions, and commands).
3. **Process [3P]:** Starting new process, replacing a process image, duplicating a process image.
4. **Semaphore [3P]:** Programming with semaphores (use functions semget, semop, semaphore_p, semaphore_v).
5. **POSIX Threads[6P]:** Programming with pthread functions(viz. pthread_create, pthread_join, pthread_exit, pthread_attr_init, pthread_cancel) .
6. **Shared Memory [9P]:**Create the shared memory , Attach the shared memory segment to the address space of the calling process , Read information from the standard input and write to the shared memory,
Read the content of the shared memory and write on to the standard output , Delete the shared memory

Books:

Course Name: Programming using Python

Course Code: ESC491

Contact: 0:0:3

Credits: 1.5

Prerequisites:

Knowledge of Mathematics and basic concepts of Programming

Course Outcomes:

After completion of the course students will be able to

ESC491.1: Understand basic of Python Programming Language

ESC491.2: Understand the use of Conditional statement and Loops

ESC491.3: Learn functions in python and represent collection type data using List and Dictionary

ESC491.4: Read and write data from & to files in Python

ESC491.5: Understand Numpy array and numerical operations on Numpy array.

Course Contents:

1. **Basics of Python:** Python Installation, python variables, data types and Operator.
2. **Loops:** While and For loops, Python Syntax, Colon & Indentation, Conditional Statements: if, elif and else.
3. **Functions:** Defining Functions in python; passing arguments.
4. **String:** Python Programming to explore string functions
5. **Lists:** Python programs using Lists; understand the use of List methods, Slicing on List.
6. **Sets:** Working with Sets; Write programs to show different set operations.
7. **Dictionary:** Demonstrate the use of Dictionaries
8. **File handling:** Reading & Writing data from a file, Redirecting output streams to files.
9. **Numpy:** Numerical operations using Numpy array; slicing numpy array; stacking numpy arrays; Write programs to show different numerical operations on numpy array;.

Collective Data from 3rd to 6th Semester (Summer/Winter Training during Semester Break & Internship should be done after 5th Semester or 6th Semester). All related certificates to be collected by the training/internship coordinator(s).

**** MOOCS COURSES for HONOURS/MINOR Degree are Program specific and to be taken from MOOCS BASKET**

Paper name: Principles of Management

Paper Code: HSMC 505

Credits: 2

No. of lectures: 24

Course Outcomes:

HSMC505.1: To develop ability to critically analyze and evaluate a variety of management practices in the contemporary context

HSMC505.2: To understand and apply a variety of management and organizational theories in practice

HSMC505.3: To be able to mirror existing practices or to generate their own innovative management competencies required for today's complex and global workplace

HSMC505.4: To be able to critically reflect on ethical theories and social responsibility ideologies to create sustainable organizations.

Course Content:

Module-1: Management Concepts: Definition, roles, functions and importance of Management, Evolution of Management thought-contribution made by Taylor, Fayol, Gilbreth, Elton Mayo, McGregor, Maslow (4L)

Module - 2: Planning and Control: Planning: Nature and importance of planning, -types of planning, Levels of planning - The Planning Process. –MBO, SWOT analysis, McKinsey's 7S Approach.

Organising for decision making: Nature of organizing, span of control, Organisational structure –line and staff authority.

Basic control process -control as a feedback system – Feed Forward Control –Requirements for effective control – control (4L)

Module - 3: Group dynamics: Types of groups, characteristics, objectives of Group Dynamics.

Leadership: Definition, styles & functions of leadership, qualities for good leadership, Theories of leadership (4L)

Module – 4: Work Study and work measurement: Definition of work study, Method Study Steps, Tools and Techniques used in the Method Study and Work Measurement Time Study: Aim & Objectives, Use of stopwatch procedure in making Time Study. Performance rating, allowances, and its types. Calculation of Standard Time. Work sampling (4L)

Module - 5: Marketing Management: Functions of Marketing, Product Planning and development, Promotional Strategy (2L)

Module - 6: Quality management: Quality definition, Statistical quality control, acceptance sampling, Control Charts –Mean chart, range chart, c chart, p chart, np chart, Zero Defects, Quality circles, Kaizen & Six Sigma, ISO -9000 Implementation steps, Total quality management (6L)

Text Books:

1. Essentials of Management, by Harold Koontz & Heinz Weihrich Tata McGraw
2. Production and Operations Management-K.Aswathapa,K .Shridhara Bhat,Himalayan Publishing House

Course Name: Compiler Design**Course Code: CS501****Contact: 3:0:0****Total Contact Hours: 36****Credit: 3****Prerequisites:**

1. Mathematics
2. Concept of programming languages
3. Data structures
4. Computer architecture
5. Formal languages and automata theory
6. Some advanced math might be required if you adventure in code optimization

Course Objective(s):

- To make the student understand the process involved in a compiler
- To create an overall view of various types of translators, linkers, loaders, and phases of a compiler
- To understand the concepts of syntax analysis, various types of parsers especially the top-down approach
- To create awareness among students about various types of bottom-up parsers,
- To understand the syntax analysis and, intermediate code generation, type checking, the role of symbol table and its organization, Code generation, machine independent code optimization and instruction scheduling

Course Outcomes:

On completion of the course students will be able

CS501.1: To define compilers and various components of a compiler.

CS501.2: To understand the roles of different phases of a compiler.

CS501.3: To implement different algorithms for designing different phases of compilers.

CS501.4: To build simple compilers using C programming languages.

Course Contents:

Module-1[7L]

Compilers, Cousins of the Compiler, Analysis-synthesis model, Phases of the compiler, Role of the lexical analyzer, Tokens, Patterns, Lexemes, Input buffering, Specifications of a token, Recognition of tokens, Finite automata, From a regular expression to an NFA, From a regular expression to DFA, Design of a lexical analyzer generator (Lex).

Module-2[10L]

The role of a parser, Context free grammars, Writing a grammar, Top down Parsing, Non-recursive Predictive parsing (LL), Bottom up parsing, Handles, Viable prefixes, Operator precedence parsing, LR parsers (SLR, LALR, Canonical LR), Parser generators (YACC), Error Recovery strategies for different parsing techniques, Syntax directed translation: Syntax directed definitions, Construction of syntax trees, Bottom-up evaluation of S-attributed definitions, L-attributed definitions, Bottom-up evaluation of inherited attributes.

Module-3[7L]

Type systems, Specification of a simple type checker, Equivalence of type expressions, Type conversions, Source language issues (Activation trees, Control stack, scope of declaration, Binding of names), Symbol tables, dynamic storage allocation techniques.

Module-4[4L]

Intermediate languages, Graphical representation, Three-address code, Implementation of three address statements (Quadruples, Triples, Indirect triples).

Module-V[8L]

Consideration for Optimization, scope of optimization, local optimization, loop optimization, folding, DAG representation, Flow Graph, Data flow equation, global optimization, redundant subexpression elimination, induction variable elimination, copy propagation, basic blocks & flow graphs, transformation of basic blocks, DAG representation of basic blocks, peephole optimization, Object code forms, machine dependent code optimization, register allocation and assignment, generic code generation algorithms, DAG for register allocation.

Name of the Paper: Database Management System

Paper Code: CS502

Contact (Periods/Week): 3:0:0

Credit Point: 3

No. of Lectures: 36

Prerequisite:

1. Logic of programming language
2. Basic concepts of data structure and algorithms

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able:

CS502.1: To Express the knowledge of data models.

CS502.2: To Implement the concept of designing an efficient relational database system.

CS502.3: To Correlate real world queries with database system.

CS502.4: To Illustrate transaction processing, concurrency control and recovery management of a database.

CS502.5: To Assess the internal storage structure to implement a proper database for an organization.

Module 1:

Introduction [3L]

Concept & Overview of DBMS, Data Models, Database Languages, Database Administrator, Database Users, Three Schema architecture of DBMS.

Module 2:

Entity-Relationship and Relational Database Model [11L]

Basic concepts, Design Issues, Mapping Constraints, Keys, Entity-Relationship Diagram, Weak Entity Sets, Extended E-R features, case study on E-R Model. Structure of relational Databases, Relational Algebra, Relational Calculus, Extended Relational Algebra Operations, Views, Modifications of the Database.

Module 3:**SQL and Integrity Constraints [6L]**

Concept of DDL, DML, DCL. Basic Structure, Set operations, Aggregate Functions, Null Values, Domain Constraints, Referential Integrity Constraints, assertions, views, Nested Subqueries, Database security application development using SQL, Stored procedures and triggers.

Module 4:**Relational Database Design [8L]**

Functional Dependency, Different anomalies in designing a Database., Normalization using functional dependencies, Decomposition, Boyce-Codd Normal Form, 3NF, Normalization using multi-valued dependencies, 4NF, 5NF, Case Study

Module 5:**Internals of RDBMS [9L]**

Physical data structures, Query optimization: join algorithm, statistics and cost bas optimization. Transaction processing, Concurrency control and Recovery Management: transaction model properties, state serializability, lock base protocols; two phase locking, Dead Lock handling.

Module 6:**File Organization & Index Structures [6L]**

File & Record Concept, Placing file records on Disk, Fixed and Variable sized Records, Types of Single-Level Index (primary, secondary, clustering), Multilevel Indexes

Course Name: Object Oriented Programming using Java

Course Code: CS503

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite: Partial Object-Oriented Programming using C++

Course Outcomes:

CS503.1: To define the process of interaction between Objects and System w.r.t. Object Oriented Paradigm.

CS503.2: To summarize basic concepts of Object Orientation in Java Programming along with different properties and features.

CS503.3: To implement various string handling functions as well as basic I/O operations in object oriented environment.

CS503.4: To explain basic code reusability concept w.r.t. Inheritance, Package and Interface.

CS503.5: To write programs using Exception handling, Multithreading and Applet (Web program in java) programming concept in Java.

Course Contents:

Module 1: [2L]

Introduction:

Object Oriented Analysis (OOA) & Object-Oriented Design (OOD) - Concepts of object-oriented programming language, Relationships among objects and classes-Generalization, Specialization, Aggregation, Association, Composition, links, Meta-class. [1L]; Object Oriented Programming concepts - Difference between Java and C++; Different features of Java [1L];

Module 2: [10L]

Java Basics:

Basic concepts of java programming - Advantages of java, Byte-code & JVM, Data types, Different types of Variables. [1L]; **Java Operators & Control statements** [1L]; Java loops. [1L]; Array. [1L]; **Creation** of class, object, method. [1L]; Constructor- Definition, Usage of Constructor, Different types of Constructors. [1L]; finalize method and garbage collection, Method & Constructor overloading. [1L]; this keyword, use of objects as parameter & methods returning objects. [1L]; Call by value & call by reference. [1L]; Static variables & methods. Nested & inner classes. [1L].

Module 3: [5L]

Basic String handling & I/O:

Basic string handling concepts- Concept of mutable and immutable string, Methods of String class- charAt(), compareTo(), equals(), equalsIgnoreCase(), indexOf(), length(), substring(). [1L]; toCharArray(), toLowerCase(), toString(), toUpperCase(), trim(), valueOf() methods, Methods of String buffer class- append(), capacity(), charAt(), delete(), deleteCharAt(). [1L]; ensureCapacity(), getChars(), indexOf(), insert(), length(), setCharAt(), setLength(),

substring(), toString(). [1L]; **Command** line arguments, basics of I/O operations – keyboard input using Buffered Reader[1L];Scanner class in Java I/O operation [1L];

Module 4: [8L]

Inheritance and Java Packages:

Inheritance - Definition, Advantages, Different types of inheritance and their implementation. [1L]; Super and final keywords, super() method. [1L]; Method overriding, Dynamic method dispatch.[1L]; Abstract classes & methods.[1L]; Interface - Definition, Use of Interface.[1L]; Multiple inheritance by using Interface.[1L]; Java Packages -Definition, Creation of packages. [1L]; Java Access Modifiers - public, private, default and protected, Importing packages, member access for packages. [1L]

Module 5: [11L]

Exception handling, Multithreading and Applet Programming :

Exception handling - Basics, different types of exception classes. Difference between Checked & Unchecked Exception. [1L]; Try & catch related case studies. [1L]; Throw, throws & finally. [1L]; Creation of user defined exception. [1L]; Multithreading - Basics, main thread [1L]; Thread life cycle.[1L]; Creation of multiple threads-yield(), suspend(), sleep(n), resume(), wait(), notify(), join(), is Alive().[1L]; Thread priorities, thread synchronization.[1L]; Interthread communication, deadlocks for threads[1L]; Applet Programming - Basics, applet life cycle, difference between application & applet programming[1L]; Parameter passing in applets. [1L]

Textbooks:

Course Name: Advance Algorithm

Course Code: CS504A

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Design & Analysis of Algorithm (CS402)

Course Objective(s):

The aim is to learn how to develop efficient algorithms for simple computational tasks and reasoning about the correctness of them

Through the complexity measures, different range of behaviors of algorithms and the notion of tractable and intractable problems will be understood.

Course Outcome(s):

After completion of the course students will be able to

- CS504A.1** Analyze the complexity/performance of different algorithms.
- CS504A.2** Determine the appropriate data structure for solving a particular set of problems.
- CS504A.3** Categorize the different problems in various classes according to their complexity.
- CS504A.4** Achieve an insight of recent activities in the field of the advanced data structure.
- CS504A.5** Design and build solutions for a real-world problem by applying relevant distributions

Course Content:

Module-1 [4L]

Sorting:

Review of various sorting algorithms, topological sorting

Graph:

Definitions and Elementary Algorithms: Shortest path by BFS, shortest path in edge-weighted case (Dijkstra's), DFS and computation of strongly connected components, emphasis on correctness proof of the algorithm and time/space analysis, example of amortized analysis.

Module-2 [6L]

Matroids:

Introduction to greedy paradigm, algorithm to compute a maximum weight maximal independent set. Application to MST.

Graph Matching:

Algorithm to compute maximum matching. Characterization of maximum matching by augmenting paths, Edmond's Blossom algorithm to compute augmenting path.

Module-3 [16L]

Flow-Networks:

Maxflow-Mincut Theorem, Ford Fulkerson Method to compute Maximum Flow, Edmond-Karp maximum-flow algorithm.

Matrix Computations:

Strassen's algorithm and introduction to divide and conquer paradigm, inverse of a triangular matrix, relation between the time complexities of basic matrix operations, LUP-decomposition

Shortest Path in Graphs:

Floyd-Warshall algorithm and introduction to dynamic programming paradigm. More examples of dynamic programming.

Modulo Representation of integers/ polynomials:

Chinese Remainder Theorem, Conversion between base-representation and modulo-representation. Extension to polynomials. Application: Interpolation problem.

Discrete Fourier Transform (DFT):

In complex field, DFT in modulo ring. Fast Fourier Transform algorithm. Schönhage-Strassen Integer Multiplication algorithm

Amortized Analysis:

Aggregate, Accounting, and Potential Method

Module-4[10L]**Linear Programming:**

Geometry of the feasibility region and Simplex algorithm

NP-completeness:

Examples, proof of NP-hardness and NP-completeness. One or more of the following topics based on time and interest Approximation algorithms, Randomized Algorithms, Interior Point Method, Advanced Number Theoretic Algorithm

Problem Solving Application

Recent Trends in problem solving paradigms using recent searching and sorting techniques by applying recently proposed data structures.

Textbook:

1. "Introduction to Algorithms" by Cormen, Leiserson, Rivest, Stein.
2. "The Design and Analysis of Computer Algorithms" by Aho, Hopcroft, Ullman.
3. "Algorithm Design" by Kleinberg and Tardos. 4. Design & Analysis of Algorithms, Gajendra Sharma, Khanna Publishing House, New Delhi

ReferenceBooks:

1. "Algorithm Design" by Kleinberg and Tardos.
2. Design & Analysis of Algorithms, Gajendra Sharma, Khanna Publishing House, New Delhi

Name of the Paper: Advanced Computer Architecture

Paper Code: CS504B

Contact (Periods/Week):3:0:0

Credit Point: 3

No. of Lectures: 36

Prerequisite:

1. Familiarity with the functionalities of basic digital computer system.
2. Fundamentals of Computer Architecture.

Course Objective(s):

- To understand the Concept of Parallel Processing and its applications
- To implement the Hardware for Arithmetic Operations
- To analyse the performance of different scalar Computers
- To understand the Pipelining Concept for a given set of Instructions
- To learn the performance of pipelining and non-pipelining environment in a processor

Course Outcomes(s):

CS504B.1 To acquire the knowledge of parallelism and pipelining

CS504B.2 To develop knowledge of parallel processing

CS504B.3 To combine the concept and design techniques of interconnection network

CS504B.4 To acquire the knowledge of shared memory architecture

CS504B.5 To describe the fundamentals of embedded system architecture

Module 1: Introduction to Advanced Computer Architectures [5L]

Different types of architectural classifications – instruction vs. data (SISD, SIMD, MISD, MIMD), serial vs. parallel, pipelining vs. parallelism; Pipelining: Definition, different types of pipelining, hazards in pipelining.

Concept of reservation tables, issue of multiple instructions with minimum average latency (MAL).

Module 2: Parallel Processing & ILP [8L]

RISC architecture, characteristics of RISC instruction set & RISC pipeline, its comparisons with

CISC, necessity of using optimizing compilers with RISC architecture, Review of instruction-level parallelism-Super pipelining, Superscalar architecture, Diversified pipelines and out of order execution, VLIW architecture, Dataflow and Control Flow Architectures, Loop Parallelization

Module 3: Interconnection Networks [13L]

Desirable properties of interconnection networks, static interconnection networks – path, cycle, double-loop, star, wheel, 2D mesh and its variants, multi-mesh, tree, shuffle-exchange, cube, cube connected cycles.

Dynamic interconnection networks: concepts of blocking, rearrangeable and blocking but rearrangeable networks, various types of multistage interconnection networks (MIN)- crossbar, Clos, baseline, omega, Benes.

Module 4: Shared Memory Architecture [5L]

Fundamentals of UMA, NUMA, NORMA, COMA architectures, Performance measurement for parallel architectures – Amadahl's law, Gustafson's law.

Module 5: Embedded System Architecture [5L]

Definition, Example, Classification of Embedded system, Embedded System Design Issues: Hardware issues (Processor, Memory, Peripherals) ,Software issues (Programming Languages, Time Criticality, RTOS).

Paper Name: Neural Networks and Deep Learning

Paper Code: CS504C

Contact (Periods/Week): 3:0:0

Credit Point: 3

No. of Lectures: 35

Prerequisite:

1. A solid background in Statistics, Calculus, Linear Algebra and Probability.
2. Good Exposure of Python packages like, NumPy, Pandas, Matplotlib, Scikit-learn

Course Objective(s):

To introduce the fundamental techniques and principles of Neural Networks

To study the different models in ANN and their applications

To familiarize deep learning concepts with CNN and RNN

Course Outcome(s):

On completion of the course students will be able to

CS504C.1: Understand the basic concepts in Neural Networks and Deep Learning and applications.

CS504C.2: Understand the Shallow & Deep Neural Networks.

CS504C.3: Understand the Convolution Neural Network models for Images.

CS504C.4: Understand the Recurrent Neural Network models for Sequence data.

Module 1: Introduction to Neural Networks and Deep Learning [8L]

What is a Neural Network? Supervised Learning with Neural Networks, why is Deep Learning taking off? Binary Classification, Logistic Regression, Logistic Regression Cost Function, Gradient Descent, Derivatives, Computation Graph, Derivatives with a Computation Graph, Logistic Regression Gradient Descent, Vectorization, Vectorizing Logistic Regression, Vectorizing Logistic Regression's Gradient Output.

Module 2: Shallow Neural Network & Deep Neural Network [9L]

Neural Networks Overview, Neural Network Representation, computing a Neural Network's Output, Vectorizing Across Multiple Examples, Activation Functions, why do you need Non-Linear Activation Functions? Derivatives of Activation Functions, Gradient Descent for Neural Networks, Backpropagation Intuition, Random Initialization, Deep L-layer Neural Network, Forward Propagation in a Deep Network, getting your Matrix Dimensions Right, Building Blocks of Deep Neural Networks, Forward and Backward Propagation, Parameters vs Hyperparameters.

Module 3: Foundations of Convolutional Neural Networks [9L]

Computer Vision, Edge Detection Example, Padding, Strided Convolutions, Convolutions Over Volume, One Layer of a Convolutional Network, Simple Convolutional Network Example, Pooling Layers, Why Convolutions? Classic Networks, ResNets, Why ResNets Work? Networks in Networks and 1X1 Convolutions, Inception Network, MobileNet Architecture, EfficientNet, Using Open-Source Implementation, Transfer Learning, Data Augmentation; Object Localization, Landmark Detection, Object Detection, Convolutional Implementation of Sliding Windows, Bounding Box Predictions, Non-max Suppression, Anchor Boxes, YOLO Algorithm, Semantic Segmentation with U-Net, Transpose Convolutions, U-Net Architecture.

Module 4: Sequence Models [9L]

Why Sequence Models? Notation, Recurrent Neural Network Model, Backpropagation Through Time, Different Types of RNNs, Language Model and Sequence Generation, Sampling Novel Sequences, Vanishing Gradients with RNNs, Gated Recurrent Unit (GRU), Long Short Term Memory (LSTM), Bidirectional RNN, Deep RNNs, Word Representation, Using Word Embeddings, Properties of Word Embeddings, Embedding Matrix, Learning Word Embeddings, Word2Vec, GloVe Word Vectors, Sentiment

Classification, Debiasing Word Embeddings, Basic Sequence Models, Picking the Most Likely Sentence, Beam Search, Refinements to Beam Search, Error Analysis in Beam Search, Attention Model, Speech Recognition, Trigger Word Detection, Transformer Network Intuition, Self-Attention, Multi-Head Attention.

Course Name: Artificial Intelligence

Course Code: CS504D

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite: Data Structure, Design and Analysis of Algorithms, Statistics

Course Objective(s):

The objective of the course is to enable students to

Comprehend the fundamental concepts of Knowledge Representation and Inferencing in Artificial Intelligence and its utilitarian importance in current technological context

Formulate a problem as State-Space Exploration Framework or an Inferencing Framework of Artificial Intelligence.

Use the strategies of AI-Heuristics to find acceptable solutions avoiding brute-force techniques.

Design AI-Frameworks for Inferencing based on knowledge base.

Analyze effectiveness of AI-Inferencing Model in offering solutions to the respective problem.

Course Outcomes:

On completion of the course students will be able

CS504D.1: To understand the concepts of Artificial intelligence, Intelligent agents and Learning

CS504D.2: To Express knowledge of the world using logic and infer new facts from that Knowledge.

CS504D.3: To implement intelligent algorithms for constraint satisfaction problems and game playing.

CS504D.4: To apply Artificial intelligence Techniques in different fields like Natural Language Processing and Expert Systems..

CS504D.5: To analyze working knowledge in PROLOG in order to write simple PROLOG programs and explore more sophisticated PROLOG code on their own.

Course Content:**Module-1: Introduction to Artificial Intelligence [1L]**

Basic Concepts, History of Artificial Intelligence, Architecture of an Artificial Intelligent Agent, Applications of Artificial Intelligence

Module-2: Artificial Intelligence Problem Formulation as State-Space Exploration Problem for Goal Searching [5L]

Basic Concepts, State-Space Exploration Formulation for Water Jug Problem, Missionaries and Cannibals Problems, Farmer-Wolf-Goat-Cabbage Problem, 8-Puzzle Problem, Constraint Satisfaction Problem and Production System for Goal Searching.

Blind Search Techniques for Goal Searching: Breadth First Search, Depth First Search, Depth Limited Search, Iterative Deepening Search, Uniform Cost Search, Bi-directional Search.

Module-3: Heuristic Techniques for Goal Searching [8L]

Basic Concepts of Heuristic Techniques and Properties of Heuristic Functions, Hill Climbing Search. Best First Search, A* Search, Memory-bounded heuristic search: Iterative-deepening A* Search, Recursive Best First Search, Simplified Memory Bounded A* Search.

Simulated Annealing Based Stochastic Search, Genetic Algorithm Based Evolutionary Search, Ant Colony Optimization, Particle Swarm Optimization.

Module-4: Adversarial Search for Game Playing [2L]

Basic Concepts, Minimax Search, Alpha-Beta Pruning.

Module-5: Knowledge Representation and Inference using Propositional Logic and Predicate Logic [5L]

Propositional Logic: Knowledge Representation and Inference using Propositional Logic

Predicate Logic: Knowledge Representation, Inference and Answer Extraction using First Order Predicate Logic

Module-6: Slot-and-Filler Structure for Knowledge Representation [2L]

Weak Slot-and-Filler Structure for Knowledge Representation: Semantic Nets and Frames.
 Strong Slot-and-Filler Structure for Knowledge Representation: Conceptual Dependency and Script.

Module-7: Reasoning under Uncertainty [5L]

Bayesian Inferencing and Bayesian Belief Network, Dempster-Shafer Theory, Overview of Fuzzy Logic and Inferencing, Overview of Hidden Markov Model.

Planning [5L]

Basic Concepts, Problem of Blocks World, Components of a Planning System, Algorithms for Planning: Goal Stack, Nonlinear Planning Using Constraint Posting, Hierarchical Planning, Algorithms for Planning as State-Space Search, Heuristics for planning, Planning Graphs and GRAPHPLAN Algorithm.

Introduction to Natural Language Processing [1L]

Basic Concepts, Steps of Natural Language Processing, Morphological, Syntactic and Semantic Analysis, Discourse Integration and Pragmatic Analysis, Applications of Natural Language Processing.

Module-8: Introduction to Machine Learning [2L]

Basic concepts of Machine Learning Model, Supervised Learning, Unsupervised Learning, and Reinforced Learning, Overview of Artificial Neural Network

Textbook:

1. Russell, S. and Norvig, P. 2015. Artificial Intelligence - A Modern Approach, 3rd edition, Prentice Hall.

B. Practical**Course Name: Compiler Design Lab****Course Code: CS591****Contact: 0:0:3****Credits: 1.5****Course Objective(s):**

To implement Lexical Analyzer using Lex tool & Syntax Analyzer or parser using YACC Tool

To implement NFA and DFA from a given regular expression

To implement front end of the compiler by means of generating Intermediate codes

To implement code optimization techniques

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able

CS591.1: Design & conduct experiments for NFA and DFA from a given regular expression.**CS591.2:** Apply the knowledge of lex tool & yacc tool to develop a scanner & parser.**CS591.3:** Design & implement a front end of the compiler.**CS591.4:** Develop program for implementing symbol table.**CS591.5:** Develop program for solving parser problems**CS591.6:** Apply the knowledge of patterns, tokens & regular expressions in programming for solving a problem in the field of data mining.**List Of Experiments (Includes But Not Limited To)**

1. NFA Construction from a regular expression.
2. Conversion between NFA and DFA.
3. Use LEX tool to implement a lexical analyser.
4. Use YACC tool to implement a syntax analyser or parser.
5. Implementation of a recursive descent parser for an expression grammar that generates arithmetic expressions with digits, + and *.
6. Checking whether a string belongs to a grammar or not.
7. Calculation of leading & trailing for all the non-terminals of the given grammar.
8. Calculation of FIRST, FOLLOW of the given grammar.
9. Identifying whether a given string is an identifier or not.
10. Identifying whether a string is a keyword or not.
11. Identifying whether a string is a constant or not.

Course Name: Database Management System Lab

Course Code: CS592

Contact: 3P/Week

Credits: 1.5

Prerequisite:

1. Logic of programming language
2. Basic concepts of data structure and algorithms

Course Objective(s):

To learn the data models, conceptualize and depict a data base system

To learn the fundamental concepts of SQL queries.

To understand the concept of designing a database with the necessary attributes.

To know the methodology of Accessing, Modifying and Updating data & information from the relational databases

To learn database design as well as to design user interface and how to connect with database.

Course Outcomes:

On completion of the course students will be able to

CS592.1: Understand the basic concepts regarding database, know about query processing and techniques involved in query optimization and understand the concepts of database transaction and related database facilities including concurrency control, backup and recovery.

CS592.2: Understand the introductory concepts of some advanced topics in data management like distributed databases, data warehousing, deductive databases and be aware of some advanced databases like partial multimedia and mobile databases.

CS592.3: Differentiate between DBMS and advanced DBMS and use of advanced database concepts and become proficient in creating database queries.

CS592.4: Analyze database system concepts and apply normalization to the database.

CS592.5: Apply and create different transaction processing and concurrency control applications.

.

Module 1

Conceptual Designing using ER Diagrams (Identifying entities, attributes, keys and relationships between entities, cardinalities, generalization, specialization etc.)

Module 2

Converting ER Model to Relational Model (Represent entities and relationships in Tabular form, represent attributes as columns, identifying keys) and apply the normalization techniques.

Module 3

Creation of Tables using SQL- Overview of using SQL tool, Data types in SQL, Creating Tables(along with Primary and Foreign keys), Altering Tables and Dropping Tables

Module 4

Practicing DML commands- Insert, Select, Update, Delete

Module 5

Practicing Queries using ANY, ALL, IN, EXISTS, NOT EXISTS, UNION, INTERSECT, CONSTRAINTS etc., Practicing Sub queries (Nested, Correlated) and Joins (Inner, Outer and Equi).

Module 6

Practice Queries using COUNT, SUM, AVG, MAX, MIN, GROUP BY, HAVING, VIEWS Creation and Dropping, Practicing on Triggers - creation of trigger, Insertion using trigger, Deletion using trigger, Updating using trigger

Module 7

Procedures- Creation of Stored Procedures, Execution of Procedure, and Modification of Procedure, PL/SQL, Cursors- Declaring Cursor, Opening Cursor, Fetching the data, closing the cursor.

Course Name: Object Oriented Programming using Java Lab

Course Code: CS593

Contact: 0:0:3

Credits: 1.5

Prerequisites:

Computer Fundamentals

Basic understanding of Computer Programming and related Programming Paradigms

Problem Solving Techniques with proper logic Implementation.

Course Objective(s):

- It demonstrates that how can you change the implementation of an object without affecting any other code by increasing data security and protecting unwanted data access. (Encapsulation).
- It allows you to have many different functions, all with the same name, all doing the same job, but depending upon different data. (Polymorphism).

- It guides you to write generic code: which will work with a range of data, so you don't have to write basic stuff over, and over again. (Generics).
- It lets you write a set of functions, then expand them in different direction without changing or copying them in any way. (Inheritance)

Course Outcomes:

On completion of the course students will be able

CS593.1: To identify the process of object orientation in java with the help of Class- object- Constructor relationship in Object Oriented Programming.

CS593.2: To express the basic knowledge of code reusability with the help of Java in Object Oriented Programming.

CS593.3: To implement various keywords, Encapsulation and Polymorphism technique in OOPs environment.

CS593.4: To experiment with basic Data abstraction concept, Inheritance, Package and Interface.

CS593.5: To write programs in Exception handling, Multithreading and Applet (Web program in java) mechanism in Java.

Course Contents:

Module 1:Java Basics:

1. Simple Java programming using operators, control statements & loops, array.
2. Programming on class, object, and method, access specifier.
3. Programming on constructor, method/constructor overloading.
4. Programming on this keyword, call by value & call by reference, static variables & methods, inner classes.

Module 2: Basic String handling & I/O:

1. Programming to show the use of String class methods - charAt(), compareTo(), equals(), equalsIgnoreCase(), indexOf(), length() , substring(), toCharArray(), toLowerCase(), toString(), toUpperCase(), trim(), valueOf() methods.
2. Programming to show the use of StringBuffer class methods - append(), capacity(), charAt(), delete(), deleteCharAt(),ensureCapacity(), getChars(), indexOf(), insert(), length(), setCharAt(), setLength(), substring(), toString() methods.
3. Programming on Command line arguments.
4. Programming using keyboard input by implementing BufferedReader& Scanner classes.

Module 3: Inheritance, Interface and Java Packages:

1. Programming on Simple Inheritance, super and final keywords, super() method.
2. Programming on method overriding, dynamic method dispatch,abstract classes & methods, multiple inheritance by using interface.
3. Programming on importing system package, creating user-defined package, importing user-defined package, using protected access specifier, subclassing an imported class of a package,

using same names for classes of different packages, adding multiple public classes to a package.

Module 4: Exception handling, Multithreading and Applet Programming:

1. Programming on exception handling using try-catch block, implementing throw and throws keywords, using finally block, creating user-defined exception.
2. Programming on creating child threads i) by extending thread class ii) by implementing runnable interface, creating child threads by assigning thread priorities.
3. Programming on creating simple applet to display some message, creating applet two add 2 integers, creating applet to do GUI based programming.

Textbooks:

Course Name: Advanced Algorithms Lab

Course Code: CS594A

Contact: 0:0:3

Credits: 1.5

Prerequisites:

1. Programming knowledge
2. Knowledge of Design and Analysis of Algorithm

Course Objective(s):

- Design and implement efficient algorithms for a specified application.
- Strengthen the ability to identify and apply the suitable algorithm for the given real world problem.

Course Outcome(s):

After completion of the course students will be able to

CS594A.1: Introduce students to the advanced strategies of designing and analyzing algorithms.

CS594A.2: The student should be able to prefer suitable algorithms and use it for a precise problem.

CS594A.3: To familiarize students with basic paradigms and data structures used to solve advanced algorithmic problems.

CS594A.4: Students should be able to understand different classes of problems concerning their computation difficulties.

CS594A.5: To introduce the students to recent developments in the area of algorithmic design.

Course Content:

1. Write the following problems in any programming language. Programming Language used: C
2. **Divide and Conquer:** Implementation of finding Maximum and Minimum element from an array of integer, Quick Sort, Check the running time for different positions of pivot elements. Randomized version of quick sort using Divide and Conquer Method.
3. **Dynamic Programming:** Calculation of the minimum number of scalar multiplications needed for chain of Matrices Multiplication Technique, Implementation of Single Source shortest Path for a graph (Dijkstra and Bellman Ford Algorithm), Implement all pair Shortest path for a graph (FloydWarshall Algorithm)
4. **Greedy method:** Implementation of fractional Knapsack Problem, MST by Prim's algorithm, Implement MST by Kruskal's algorithm
5. **Graph Traversal Algorithm:** Implement Depth First Search (DFS), application of DFS (do topological sorting, identify strongly connected components)
6. **String Matching:** Implement KMP algorithm
7. **Network Flow:** Implement Ford-Fulkerson algorithm to get maximum flow of a given flow network.
8. **Modulo Representation of integers/ polynomials:** Chinese Remainder Theorem
9. **Linear Programming:** Simplex Algorithm

Course Name: Advanced Computer Architecture Lab

Course Code:CS594B

Contact: 0:0:3

Credits: 1.5

Prerequisites: Knowledge of designing different circuits in Computer Organization and Architecture Lab

Course Outcome(s):

CS594B.1: Ability to design the basic gates

CS594B.2: Ability to verify the truth table.

CS594B.3: Implement basic knowledge of Hardware description Language.

CS594B.4: Design circuit using Xilinx tools.

List of Experiment:

1. HDL introduction
2. Basic digital logic base programming with HDL
3. 8-bit Addition, Multiplication, Division
4. 8-bit Register design
5. Memory unit design and perform memory operators..
6. Implement Encoder, Decoder circuit and simulate for truth table verification.
7. Implement different types of flipflop and simulate for truth table verification.
8. Implement different types of parallel circuits(SISO,SIPO,PISO,PIPO)and simulate the result.
9. Implement ALU and simulate the result.
10. Implement RAM chip and simulate the result.
11. 8-bit simple CPU design
12. 8. Interfacing of CPU and Memory
13. Innovative Experiments.

Paper Code: CS594C

Contact (Periods/Week): 0:0:3

Credit Point: 1.5

Prerequisite:

1. A solid background in Statistics, Calculus, Linear Algebra and Probability.
2. Good Exposure of Python packages like, Numpy, Pandas, Matplotlib, Scikit-learn

Course Objective(s):

- To introduce the Keras/Tensorflow API for Neural Networks and Deep Learning.

- To build Convolutional Neural Network models using Keras/Tensor flow API
- To build Recurrent Neural Network models using Keras/Tensor flow API

Course Outcome(s):

On completion of the course students will be able to

CS594C.1: Understand the Keras/Tensorflow API in details using Python.

CS594C.2: Implement the Convolutional Neural Network models using Keras/Tensorflow API

CS594C.3: Implement the Recurrent Neural Network models using Keras/Tensorflow API

List of Experiment:

The following list of Experiments

1. Getting Started with DL in Keras
2. Deep Neural Networks for Supervised Learning: Regression
3. Deep Neural Networks for Supervised Learning: Classification
4. Tuning and Deploying Deep Neural Networks
5. Deep learning for computer vision
6. Deep learning for text and sequences
7. Going beyond the Sequential model: The Keras functional API
8. Inspecting and monitoring deep-learning models using Keras callbacks and TensorBoard
9. Text generation with LSTM
10. Generating images with variational autoencoders and Generative adversarial networks
11. Introduction to TensorFlow 2.0
12. Images and Tests with TensorFlow 2.0

Course Name: Artificial Intelligence Lab

Course Code: CS594D

Contact: 0:0:3

Total Contact Hours: 36

Credits: 1.5

Prerequisite: Data Structure, Design and Analysis of Algorithms, Statistics

Course Objective(s):

The objective of the course is to enable students to

Gain foundation acknowledge of PROLOG to implement an Artificial Intelligent Agent as an executable computer program for Knowledge Representation and Inferencing

Formulate a problem by analyzing its characteristics to fit a State-Space Exploration Framework or an Inferencing Framework of Artificial Intelligence.

Apply the concepts of Artificial Intelligence to solve a problem by implementing well-known Artificial Intelligence strategies using proper techniques and tools of PROLOG.

Build expert systems offering solutions to the challenging problems of Artificial Intelligence.

Implement Artificial Intelligence based ideas as executable PROLOG programs through developing intelligent heuristic strategies.

Course Outcomes:

On completion of the course students will be able

CS594D.1: To understand the concept of simple programming using PROLOG/ LISP.

CS594D.2: To understand the concept of AI based programs using PROLOG/ LISP.

CS594D.3: To apply logic based techniques in various real life problem domains.

CS594D.4: To analyze logic based techniques in various real life problem domains.

Course Content:

WEEK-1: Introduction to PROLOG Programming along with the IDE and its Basic Components

Assignments for understanding the Basic Components of Knowledge Representation and Inferencing in Artificial Intelligence using PROLOG Programming and its working strategy.

WEEK -2: Arithmetic, Boolean Expression, Decision Making Strategies

Assignments for understanding implementation of Arithmetic Expression, Boolean Expression, and Decision-Making Strategies.

WEEK -3: Recursion and Looping through Recursion

Assignments for understanding implementation of Recursion and Looping through Recursion.

WEEK -4: List of Data Items in PROLOG

Assignments for understanding the utility of List in solving various problems.

WEEK -5: Blind Search Techniques – BFS, DFS

Implementation of BFS and DFS Algorithms for Goal Searching to solve Puzzles (8-Puzzle, Water Jug Puzzle)

WEEK -6: Heuristic Search Techniques – A* Search

Implementation of A* Search Algorithm for Goal Searching to solve Puzzles (8-Puzzle, Route Finding Puzzle)

WEEK-7: Constraint Satisfaction Problem Solving

Implementation of Backtracking Strategies to solve Constraint Satisfaction Problems (Graph Colouring Problem, 8-Queens Problem)

WEEK -8: Game Playing

Implementation of Adversarial Search Algorithm with alpha-beta pruning strategy for Game Playing (Tic-Tac-Toe)

WEEK -9: Discussion on Project Problems and Allocation (Problem Description Report Submission)

WEEK -10: Designing Solution Model and Proposal Report Submission

WEEK -11: Project Implementation, Verification and Documentation

WEEK -12: Project Demonstration and Project Report Review

C. Mandatory Courses

Course Name: Constitution of India

Course Code: MC 501

Contacts: 2L:0T:0P

Total Contact Hours: 24

Credit: 0

Prerequisite: None

Course Outcomes:

CO1: Identify and explore the basic features and modalities of Indian constitution.

CO2: Differentiate and relate the functioning of Indian parliamentary system at the centre and state level.

CO3: Differentiate the various aspects of Indian Legal System and its related bodies.

Course Content

Module 1: Introduction:

4L

“Constitution”- Historical Background of the Constituent Assembly, Indian Constitution and its Salient Features, the Preamble of the Constitution.

Module 2: Fundamental Rights, Fundamental Duties, Directive Principles of State Policy:

8L

The Right to Equality

The Right to Freedom: I (Article 19)

The Right to Freedom: II (Articles 20, 21 and 22)

The Right against Exploitation

The Right to freedom of Religion

Cultural and Educational rights

The Right to Property

The Right to Constitutional Remedies

The Directive Principles

Fundamental Duties

Module 3: Union Government and its Administration

6L

Structure of the Indian Union, Parliamentary System, Federal System, Centre-State Relations, Amendment of the Constitutional Powers and Procedure, The historical perspectives of the constitutional amendments in India, Emergency Provisions: National Emergency, President Rule, Financial Emergency, and Local Self Government – Constitutional Scheme in India.

Module 4: The Machinery of Government in the State

6L

Powers of Indian Parliament Functions of Rajya Sabha, Functions of Lok Sabha, Powers and Functions of the President, Comparison of powers of Indian President with the United States, Powers and Functions of the Prime Minister, Judiciary – The Independence of the Supreme Court, Appointment of Judges

State Executives – Powers and Functions of the Governor, Powers and Functions of the Chief Minister, Functions of State Cabinet, Functions of State Legislature, Functions of High Court and Subordinate Courts.

Collective Data from 3rd to 6th Semester (Summer/Winter Training during Semester Break & Internship should be done after 5th Semester or 6th Semester). All related certificates to be collected by the training/internship coordinator(s).

**** MOOCS COURSES for HONOURS/MINOR Degree are Program specific and to be taken from MOOCS BASKET**

Syllabus of 6th Semester

A. Theory

Course Name: Economics for Engineers

Course Code: HSMC 604

Contact: 2:0:0

Total Contact Hours: 24

Credits: 2

Pre-requisites:

MATH–College Algebra, Pre-Calculus Algebra and Trigonometry.

Course Outcomes:

On successful completion of the learning sessions of the course, the learner will be able to:

HSMC604.1: Apply the appropriate engineering economics analysis method(s) for problem solving: present worth, annual cost, rate-of-return, payback, break-even, benefit-cost ratio.

HSMC604.2: Evaluate the cost effectiveness of individual engineering projects using the methods learned and draw inferences for the investment decisions.

HSMC604.3: Compare the life cycle cost of multiple projects using the methods learned, and make a quantitative decision between alternate facilities and/or systems.

HSMC604.4: Evaluate the profit of a firm, carry out the break even analysis and employ this tool to make production decision.

HSMC604.5: Discuss and solve advanced economic engineering analysis problems including taxation and inflation.

Course Contents:

Module1: Introduction[3L]

Managerial Economics-Relationship with other disciplines-Firms: Types, Objectives and goals- Managerial Decisions-Decision Analysis.

Module2: Demand and Supply Analysis[5L]

Demand-Types of demand-determinants of demand-Demand function-Demand Elasticity-Demand forecasting-Supply-Determinants of supply-Supply function-Supply Elasticity.

Module3: Cost Analysis[5L]

Element of costs, Marginal cost, Marginal Revenue, Sunk cost, Opportunity cost, Break-even analysis –PV ratio.

Module4: Elementary economic Analysis[4L]

Inflation-Meaning of inflation, types, causes, measures to control inflation.

National Income-Definition, Concepts of national income, Method of measuring national income.

Module5: Financial Accounting [5L]

Concepts and Definition of Accounting, Journal, Ledger, Trial Balance. Trading A/C, Profit & Loss

A/C and Balance Sheet.

Module 6: Investment Decision [2L]

Time value of money-Interest- Simple and compound, nominal and effective rate of interest, Cashflow diagrams, Principles of economic equivalence. Evaluation of engineering projects-Present worth method, Future worth method, Annual worth method, Internal rate of return method, Cost benefit analysis for public projects.

Textbooks:

Course Name: Computer Networks

Course Code: CS601

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

1. Familiarity and knowledge of Operating Systems and Computer Architecture
2. Also require little bit programming languages concepts like C, Java.

Course Objective(s):

- To be familiar with the basics of data communication
- To be familiar with various types of computer networks
- To have experience in designing communication protocols
- To be exposed to the TCP/IP protocol suite

Course Outcomes:

On completion of the course students will be able

CS601.1: To remember and understand computer networks, OSI model and TCP/IP protocol suit.

CS601.2: To experiment protocols layers and LAN technologies.

CS601.3: To analyze working of applications layer protocols.

CS601.4: To validate routing and congestion control algorithms.

CS601.5: To building networks using internet model and protocols.

Course Contents:**Module 1: Introduction [6L]****Introduction (3L):**

Introduction: Computer Network, data communication, topology, OSI & TCP/IP Reference Models, layers and characteristics, Wireless Network, comparison to wired and wireless network.

Physical Layer: [3L]

Overview of data (analog & digital), signal (analog & digital), transmission (analog & digital) & transmission media (guided & unguided); Circuit switching: time division & space division switch, TDM bus; Telephone Network;

Module 2: Data Link Layer [10L]

Framing, Error Control, Error Detection and Correction, Flow Control, Data Link Protocols, Simple Stop-and-Wait Protocol, ARQ mechanism, Sliding Window Protocols, One-Bit Sliding Window Protocol, Go-Back-N and Selective Repeat, HDLC, PPP Medium Access Control Sub-layer, The Channel Allocation. [5L]

Multiple Access Protocols: ALOHA, Carrier Sense Multiple Access Protocols, IEEE 802.x Ethernet, Switched Ethernet, Fast Ethernet, Gigabit Ethernet, 10 Gigabit Ethernet, Wireless LANs - IEEE 802.xx, Bluetooth, RFID, Bridges, Virtual LANs, Switching. [5L]

Module 3: Network Layer [10L]

IP Addressing, IPv4 and IPv6. Difference IPv4 and IPv6, Conversion of IPv4 and IPv6, Subnetting, Super netting, Design Issues, Store-and-Forward Packet Switching, Virtual-Circuit and Datagram Networks, ARP, IP, ICMP, IPV6, BOOTP and DHCP–Delivery protocols Other Protocols such as mobile IP in wireless Network. [5L] Routing: Shortest Path Algorithms, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing, Broadcast Routing, Multicast Routing, Anycast Routing: RIP, OSPF, BGP; Routing for Mobile Hosts. [5L]

Module 4: Transport layer: [6L]

Process to Process delivery; UDP; TCP, SCTP, TCP RENO, TCP/IP in Wireless environment, Congestion control in TCP: Congestion Control: Open Loop, Closed Loop choke packets; Quality of service: techniques to improve QoS: Leaky bucket algorithm, Token bucket algorithm. [5L]

Advanced topic such as Remote Procedure Call, Delay Tolerant Networks. [1L]

Module 5: Application Layer [3L]

Introduction to DNS, SMTP, SNMP, FTP, HTTP & WWW: Cryptography (Public, Private Key based), Digital Signature, Firewalls

Module 6: Socket Programming [1L]

Introduction to Socket Programming, UDP socket and TCP Socket

Text books:

1. B. A. Forouzan – “Data Communications and Networking (3rd Ed.)” – TMH
2. S. Tanenbaum – “Computer Networks (4th Ed.)” – Pearson Education/PHI

Course Name: Software Engineering

Course Code: CS 602

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Programming for Problem Solving

Course Outcomes:

On completion of the course students will be able

CS602.1: To identify software engineering problems, including specification, design, implementation, and testing of software systems that meet performance and quality assurance

CS602.2: To gather software requirements through a productive working relationship with various stakeholders of the project

CS602.3: To prepare solutions in one or more application domains using software engineering approaches that integrates ethical, social, legal and economic concerns.

CS602.4: To validate the code from the design and effectively apply relevant standards and perform testing, and quality management and practice.

CS602.5: To build modern engineering tools necessary for project management, software reuse and maintenance.

Course Content:

Module-1: [6L]

Introduction: Software Engineering, Characteristics, Components, Application, Definitions. Software Project Planning-Feasibility Analysis, Technical Feasibility, Cost-Benefit Analysis, Basics of estimation : COCOMO (Basic, intermediate, Complete) model.

Module- 2: [6L]

Evolution and impact of Software engineering, software life cycle models: Waterfall, prototyping, Evolutionary, and Spiral models. Feasibility study, Functional and Non-functional requirements, Requirements gathering, Requirements analysis and specification.

Module -3:[8L]

Basic issues in software design, modularity, cohesion, coupling and layering, function-oriented software design: DFD and Structure chart, object modeling using UML, Object-oriented software development, user interface design. Coding standards and Code review techniques.

Module -4:[7L]

Fundamentals of testing, White-box, and black-box testing, Test coverage analysis and test case design techniques, mutation testing, Static and dynamic analysis, Software reliability metrics, reliability growth modeling.

Module -5: [9L]

Software project management, Project planning and control, cost estimation, project scheduling using PERT and GANTT charts, cost-time relations: Rayleigh-Norden results, quality management, ISO and SEI CMMI, PSP and Six Sigma. Computer aided software engineering, software maintenance, software reuse, Component-based software development.

Text Books:

Course Name: Microprocessors & Microcontrollers**Course Code: CS-T 601****Contact: 2:1:0****Total Contact Hours: 36****Credits: 3****Prerequisite:**

Familiarity with the number system

A solid background in digital logic.

Course Objective(s):

To learn the basics of a particular microprocessor.

To learn the basics of a particular microcontroller.

To learn the interfacing of microprocessor.

Course Outcomes:

On completion of the course students will be able

CS-T-601.1: Defining the details hardware model of microprocessors with the related signals and their implications**CS-T-601.2:** Identifying the architecture of microcontroller**CS-T-601.3:** Summarizing the concept and techniques of designing and implementing interfacing of microprocessor with memory and peripheral chips involving system design**CS-T-601.4:** Implementing the concept of programming in assembly Language**CS-T-601.5:** Reviewing the performance of different computers and its architecture to real-life applications.**Course Contents:****Module -1: [9L]**

Introduction to Microcomputer based system. [1L]

History of evolution of Microprocessor and Microcontrollers and their advantages and disadvantages. [1L]

Architecture of 8085 Microprocessor, Pin description of 8085. [2L] Address/data bus De-multiplexing, Status Signals and the control signals. [1L]

Interrupts of 8085 processor (software and hardware) [2L]

I/O Device Interfacing - I/O Mapped I/O and Memory Mapped I/O, Memory interfacing with

8085 [2L]

Module -2: [9L]

Instruction set of 8085 microprocessors, Addressing modes. [3L]

Assembly language programming with examples, Counter and Time Delays, Stack and Subroutine. [4L]

Timing diagram of the instructions (a few examples) [2L]

Module 3: [7L]

The 8086 microprocessor- Architecture, Pin Details, addressing modes, interrupts [3L]

Instruction set, Examples of Simple Assembly Language [2L]

Memory interfacing with 8086 [2L]

Module -4: [6L]

Introduction to 8051 Microcontroller – Architecture, Pin Details. [3L]

Addressing modes, Instruction set, Examples of Simple Assembly Language. [3L]

Module -5: [5L]

Introduction, AVR Family architecture[1L],

Register File, The ALU[1L].

Memory access and Instruction execution. I/O memory.EEPROM. I/O ports[2].

Timers.UART. Interrupt Structure[1L]

Text Books:

1. MICROPROCESSOR architecture, programming and Application with 8085 - R. Gaonkar (Penram international Publishing LTD.) *[For Module 1 and2]*
2. Fundamentals of Microprocessor and Microcontrollers - B. Ram (Paperback) *[For Module3]*
3. 8051 Microcontroller – K. Ayala (Cengage learning) *[For Module4]*

ReferenceBooks:

1. 8086 Microprocessor – K Ayala (Cengagelearning)
2. The 8051 microcontroller and Embedded systems - Mazidi, Mazidi and McKinley (PEARSON)

Course Name: Advanced Operating Systems

Course Code: CS-S-601

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Operating Systems

Course Outcome(s):

After completion of the course students will be able to

CS-S-601.1 Demonstrate understanding of design issues of advanced operating systems and compare different types of operating systems.

CS-S-601.2 analyse the design aspects and issues of distributed operating systems.

CS-S-601.3 Demonstrate understanding of different architectures used in Distributed Operating System.

CS-S-601.4 Demonstrate understanding of different architectures used in Multiprocessor Operating System.

CS-S-601.5 Formulate the solutions to schedule the real time applications.

Course Content:

Module 1:

Architectures of Distributed Systems: System Architecture Types, 1L

Distributed Operating Systems, Issues in Distributed Operating Systems, Communication Primitives.2L

Theoretical Foundations: Inherent Limitations of a Distributed System, 1L

Lamports Logical Clocks, Vector Clocks, Causal Ordering of Messages, Termination Detection.2L

Module 2:

Distributed Mutual Exclusion: The classification of Mutual Exclusion Algorithms 2L

Non-Token-Based Algorithms: Lamports Algorithm 1L

The Ricart-Agarwala Algorithm, Maekawas Algorithm, 1L

Token-Based Algorithms: Suzuki-Kasamis Broadcast Algorithm, 1L

Singhals Heuristics Algorithm, Raymonds Heuristic Algorithm. 2L

Module 3:

Distributed Deadlock Detection: Preliminaries, 1L

Deadlock Handling Strategies in Distributed Systems 1L

Issues in Deadlock Detection and Resolution, 1L

Control Organizations for Distributed Deadlock Detection, 1L

Centralized- Deadlock – Detection Algorithms, 1L

Distributed Deadlock Detection Algorithms, 1L

Hierarchical Deadlock Detection Algorithms 1L

Module 4:

Multiprocessor System Architectures: Introduction, Motivation for multiprocessor Systems, 1L

Basic Multiprocessor System Architectures 1L

Multi Processor Operating Systems: Introduction, Structures of Multiprocessor Operating Systems 1L

Operating Design Issues, Threads, Process Synchronization. 2L

Processor Scheduling 1L

Distributed File Systems: Architecture, Mechanisms for Building Distributed File Systems, Design Issues 2L

Module 5:

Distributed Scheduling : Issues in Load Distributing, Components of a load Distributed Algorithm, 2L

Stability, Load Distributing Algorithm, Requirements for Load Distributing, Task Migration, Issues in task migration. 2L

Distributed Shared Memory: Architecture and Motivation, Algorithms for Implementing DSM, 2L

Memory Coherence, Coherence Protocols, Design Issues 2L

Text book:

Name of the Paper: Machine Learning

Paper Code: CS-D-601

Contact (Periods/Week): 3L/Week

Credit Point: 3

No. of Lectures: 36

Prerequisite:

1. Basic programming skills, Algorithm design.
2. Probability, Axioms of Probability, Conditional Probability, Bernoulli Distribution, Binomial Distribution, Multinomial Distribution, Uniform Distribution, Normal (Gaussian) Distribution, Chi-Square Distribution, t Distribution, F Distribution. Probability Distribution

and Density Functions, Joint Distribution and Density Functions, Conditional Distributions, Bayes' Rule, Expectation, Variance, Weak Law of Large Numbers.

3. Linear Algebra; Convex Optimization ; Statistics; Calculus.

Course Objective(s)

To learn the concept of how to learn patterns and concepts from data without being explicitly programmed

To design and analyse various machine learning algorithms and techniques with a modern outlook focusing on recent advances.

Explore supervised and unsupervised learning paradigms of machine learning.

To explore Deep learning technique and various feature extraction strategies.

On completion of the course students will be able

CS-D-601.1: To remember the fundamental issues and challenges of machine learning: data, model selection, model complexity, etc.

CS-D-601.2: To understand of the strengths and weaknesses of many popular machine learning approaches.

CS-D-601.3: To analyse underlying mathematical relationships within and across Machine Learning algorithms and the paradigms of supervised, un-supervised learning and reinforcement learning.

CS-D-601.4: To design and implement various machine learning algorithms in a range of real-world applications.

Module 1: [8L]

Supervised Learning (Regression/Classification) • Basic methods: Distance-based methods, Nearest-Neighbours, Decision Trees, Naive Bayes • Linear models: Linear Regression, Logistic Regression, Generalized Linear Models • Support Vector Machines, Nonlinearity and Kernel Methods • Beyond Binary Classification: Multi-class/Structured Outputs, Ranking

Module 2:[5L]

Unsupervised Learning • Clustering: K-means/Kernel K-means • Dimensionality Reduction: PCA and kernel PCA • Matrix Factorization and Matrix Completion • Generative Models (mixture models and latent factor models)

Module 3:[4L]

Evaluating Machine Learning algorithms and Model Selection, Introduction to Statistical Learning Theory, Ensemble Methods (Boosting, Bagging, Random Forests)

Module 4: [7L]

Sparse Modeling and Estimation, Modeling Sequence/Time-Series Data, Deep Learning and Feature Representation Learning

Module 5: [7L]

Scalable Machine Learning (Online and Distributed Learning) A selection from some other advanced topics, e.g., Semi-supervised Learning, Active Learning, Reinforcement Learning, Inference in Graphical Models, Introduction to Bayesian Learning and Inference

Module6: [4L]

Recent trends in various learning techniques of machine learning and classification methods.

Text Book:

CS-D-601.4	2	2	3	3	2							

Name of the Paper: Web and Internet Technology

Paper Code: CS-A-601

Contact (Periods/Week): 3L/Week

Credit Point: 3

No. of Lectures: 36

Course Objective(s):

- To impart the design, development, and implementation of Static and Dynamic Web Pages.
- To develop programs for Web using Scripting Languages and .net framework.
- To give an overview of Server-Side Programming in Web.

Course Outcomes:

On completion of the course students will be able to

CS-A-601.1: To define the concepts of World Wide Web(www), Internet, HTTP Protocol, Web Browsers, Client-Server etc.

CS-A-601.2: To summarize interactive web pages using HTML, DHTML and CSS.

CS-A-601.3: To implement the knowledge of different information interchange formats like XML.

CS-A-601.4: To explain web applications using scripting languages like JavaScript, CGI, PHP.

CS-A-601.5: To write different server side programming like Servlet, JSP and .Net framework.

Course Contents:

Module 1: [6L]

Introduction (1L): Overview, Network of Networks, Intranet, Extranet, and Internet.

World Wide Web (1L): Domain and Sub domain, Address Resolution, DNS, Telnet, FTP, HTTP.

Review of TCP/IP (1L): Features, Segment, Three-Way Handshaking, Flow Control, Error Control, Congestion control, IP Datagram, IPv4 and IPv6.

IP Subnetting and addressing (1L): Classful and Classless Addressing, Subnetting. NAT, IP masquerading, IP tables.

Internet Routing Protocol (1L): Routing -Intra and Inter Domain Routing, Unicast and Multicast Routing, Broadcast.

Electronic Mail (1L): POP3, SMTP, Clients - Servers Communication.

Module -2: [9L]

HTML, DHTML & CSS : Introduction, Elements, Attributes, Heading, Paragraph. Formatting[1L]; Link, Table, List, Block, Layout, Html Forms, and input [1L]; Iframe, Colors[1L], Image Maps and attributes of image area [1L];

Introduction to CSS, basic syntax and structure of CSS, different types internal, external and inline CSS [1L];

Basic Introduction of DHTML, Difference between HTML and DHTML, Document Object Model (DOM) [1L].

Extended Markup Language (XML) : Introduction, Difference between HTML & XML, XML-Tree [1L]; Syntax, Elements, Attributes, Validation and parsing, DTD [2L].

Module 3: [15L]

Java Scripts: Basic Introduction, Statements, comments, variable, operators, data types[1L]; condition, switch, loop, break [1L]; Java script functions, objects, and events[1L].

CGI Scripts: Introduction, Environment Variable, GET and POST Methods[1L].

Java Servlet: Servlet environment and role, Servlet life cycle [1L]; Servlet methods-Request, Response, Get and post [1L]; Cookies and Session [1L].

Java Server Page (JSP):

JSP Architecture [1L]; JSP Servers, JSP Life Cycle [1L]; Understanding the layout of JSP, JSP Scriptlet Tag [1L]; JSP implicit object (request and response) [1L]; Variable declaration, methods in JSP [1L]; JSP directive (Taglib and Include), JavaBean- inserting JavaBean in JSP [1L]; JSP Action tags (Forward & Include) [1L]; Creating ODBC data source name, Introduction to JDBC, prepared statement and callable statement [1L].

Module-4: [6L]

Threats [1L]: Malicious code-viruses, Trojan horses, worms; eavesdropping, spoofing, modification, denial of service attacks.

Network security techniques: Password and Authentication; VPN, IP Security[1L], security in electronic transaction, Secure Socket Layer (SSL), Secure Shell (SSH)[1L].

Firewall (1L): Introduction, Packet filtering, Stateful, Application layer, Proxy.

Search Engine and Web Crawler: Definition, Meta data, Web Crawler[1L], Indexing, Page rank, overview of SEO[1L].

Textbooks:

1. "Web Technology: A Developer's Perspective", N.P. Gopalan and J. Akilandeswari, PHI Learning, Delhi, 2013. (Topics covered: html, CSS, imagemap, xml)
2. "Learning PHP, MySQL & JavaScript", Robin Nixon, O'Reilly Publication. (Topics covered: Java Script)

3. “Head First Servlet’s & JSP”, Bryan Basham, Kathy Sterra, Bert Bates, O’Reilly Publication.

(Topics covered: Servlet, JSP)

4. Cryptography and Network Security by William Stallings Publisher: Pearson Education India (Topics covered: Threats, Security techniques, Firewall)

Recommended books:

1. "Programming the World Wide Web", Robert. W. Sebesta, Fourth Edition, Pearson Education, 2007.

2. “Core Web Programming”- Second Edition-Volume I and II, Marty Hall and Larry Brown, Pearson Education, 2001

Course Name: Parallel and Distributed Algorithms

Course Code: CS-T-602

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

Familiarity with the fundamentals of Design and Analysis of Algorithms.

Course Outcomes:

On completion of the course students will be able to

CS-T-602.1: Develop the fundamental knowledge of parallel and distributed models

CS-T-602.2: Design, development, and performance analysis of parallel and distributed algorithms

CS-T-602.3: Develop and implement parallel and distributed algorithms

CS-T-602.4: Analyze the performance issues in parallel computing and trade-offs

CS-T-602.5: Understand the different issues involved in distributed environment

Course Content:

Parallel Algorithms:

Module 1: Parallel Programming Models and Algorithm Design Techniques

Shared-memory model: PRAM, MIMD, SIMD, Network Model: line, ring, mesh, hypercube, Performance measurement of Parallel Algorithms

Design Techniques for PRAM Models Algorithms: Balancing, divide and conquer, parallel

prefix computation, pointer jumping, symmetry breaking, pipelining, accelerated cascading

Module 2: Algorithms for Parallel models and complexity

Algorithms for PRAM Models: List ranking, sorting and searching, tree algorithms, graph algorithms, string algorithms

Algorithms for Network Models: Matrix algorithms, sorting, graph algorithms, routing, Relationship with PRAM models

Parallel Complexity: Lower bounds for PRAM models, the complexity class NC, P completeness

Distributed Algorithms:

Module 3: Distributed Models of computation

Models of computation: Shared memory and message passing systems, synchronous and asynchronous systems, Logical time and event ordering. Global state and snapshot algorithms, clock synchronization

Module 4: Distributed Operating Systems

Mutual exclusion, deadlock detection

Classical Algorithms: Leader election, termination detection, distributed graph algorithms

Module 5: Fault tolerance and recovery

Basic concepts, fault models, agreement problems and its applications, commit protocols, voting protocols, check pointing and recovery, reliable communication

Textbooks:

1. Joseph F Jája, An Introduction to Parallel Algorithms, Addison-Wesley, 1992
2. Mukesh Singhal and Niranjan Shivaratri, Advanced Concepts in Operating Systems, McGraw-Hill

Reference Books:

Course Name: Embedded System

Course Code: CS-S-602

Contact: 3:0:0

Credits: 3

Total Contact Hours: 36

Prerequisite: Knowledge of microprocessor and microcontroller.

Course Objective(s):

1. An ability to design a system, component, or process to meet desired needs within realistic constraints.
2. Ability to understand microcontroller, microcomputer, embedded system.
3. Understand different components of a micro-controller and their interactions.
4. To become familiar with the programming environment used to develop embedded systems.
5. Understand key concepts of embedded systems like IO, timers, interrupts, interaction with peripheral devices
6. Learn debugging techniques for an embedded system

Course Outcome(s):

After completion of the course, the students will be able to

CS-S-602.1: Understand the architecture and classifications of different embedded systems and the related programming knowledge.

CS-S-602.2: Understand the concepts of embedded systems like I/O, timers, interrupts, interaction with peripheral devices

CS-S-602.3: Choose case-specific debugging technique for an embedded system.

CS-S-602.4: Design various real time systems using embedded systems.

Module 1: [5L]

Introduction to the Embedded System: Embedded system Vs General computing systems, Purpose of Embedded systems, classifications of embedded systems, fundamentals of embedded processor and microcontrollers, CISC vs. RISC, ASIC.

Module 2: [9L]

Serial and parallel communication: devices and protocols, wireless communication: devices and protocols, parallel communication network using ISA, PCI, PCT-X, Internet embedded system network protocols, USB, Bluetooth.

Module 3: [5L]

Program Modeling Concepts ; Fundamental issues in Hardware software co-design, Unified Modeling Language(UML), Hardware Software trade-offs DFG model, state machine programming model, model for multiprocessor system.

Module 4: [5L]

Real Time Operating Systems: Operating system basics, Tasks, Process and Threads, Multiprocessing and multitasking, task communication, task synchronization, qualities of good RTOS.

Module 5: [12L]

PIC microcontroller: introduction, architecture, comparison of PIC with other CISC and RISC based systems and microprocessors, assembly language programming, addressing modes,

instruction set, Interfacing with various sensors and actuators using PIC microcontroller. Programming concepts and embedded programming, embedded architecture.

Text Books:

1. Introduction to Embedded Systems : Shibu K. V. (TMH)
2. Embedded System Design – A unified hardware and software introduction: F. Vahid (John Wiley)

Reference Books:

1. Embedded Systems : Rajkamal (TMH)
2. Embedded Systems : L. B. Das (Pearson)

Course Name: Soft computing

Course Code: CS-D-602

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Discrete Mathematics, Probability and Statistics

Course Outcome(s):

After completion of the course students will be able to

CS-D-602.1: Understand the basic concept of soft computing and hard computing and apply them in designing solution to engineering problem.

CS-D-602.2: Understand appropriate learning rules for each of the architectures and learn several neural network paradigms and its applications to solving engineering and other problems.

CS-D-602.3: Apply fuzzy logic and reasoning to handle uncertainty and solving interdisciplinary engineering problems

CS-D-602.4: Use genetic algorithms to combinatorial optimization problems and recognize the feasibility of applying a soft computing methodology for a particular problem.

CS-D-602.5: To understand the concept and techniques of designing and implementing of soft computing methods in real world problem.

Course Content:

Module-1: Introduction to Soft Computing:

8L

An Overview of Artificial Intelligence, Evolution of Computing - Soft Computing Constituents – From Conventional Artificial Intelligence to Computational Intelligence - Machine Learning Basics.

Soft Computing: Introduction of soft computing, soft computing vs. hard computing, various types of soft computing techniques, applications of soft computing

Module-2: Fuzzy sets and Fuzzy logic

7L

Introduction, Fuzzy sets versus crisp sets, operations on fuzzy sets, Extension principle, Fuzzy relations and relation equations, Fuzzy numbers, Linguistic variables, Fuzzy logic, Linguistic hedges, Applications, fuzzy controllers, fuzzy pattern recognition, fuzzy image processing, fuzzy database.

Module -3: Artificial Neural Networks

9L

Artificial Neural Network: Introduction, basic models, Hebb's learning, Adeline, Perception, Multilayer feed forward network.

Back propagation, Different issues regarding convergence of Multilayer Perceptron, Competitive learning, Self-Organizing Feature Maps, Adaptive Resonance Theory, Associative Memories, Applications.

Module -4: Genetic Algorithms

7L

Evolutionary and Stochastic techniques: Genetic Algorithm (GA), different operators of Genetic Algorithm, Analysis of selection operations, Hypothesis of building Blocks, Schema theorem and convergence of Genetic Algorithm, Simulated annealing and Stochastic models, Boltzmann Machine, Applications.

Rough Set: Introduction, Imprecise Categories Approximations and Rough Sets, Reduction of Knowledge, Decision Tables, and Applications.

Module -5: Hybrid Systems

5L

Neural-Network-Based Fuzzy Systems, Fuzzy Logic-Based Neural Networks, Genetic Algorithm for Neural Network Design and Learning, Fuzzy Logic controlled Genetic Algorithm. Fuzzy Logic and Genetic Algorithm for Optimization, Applications.

Text book:

1. "Neural Networks, Fuzzy logic, and Genetic Algorithms", S. Rajasekaran & G. A. V. Pai , PHI.
2. "Principles of Soft Computing", S.N.Sivanandam, S.N Deepa, wiley publications.
3. "Neural Networks", S. Haykin, Pearson Education, 2ed, 2001.
4. "An Introduction to Genetic Algorithm", Mitchell Melanie, Prentice Hall, 1998.

Reference Books:

Name of the Paper: Human computer Interaction**Paper Code: CS-A-602****Contact (Periods/Week): 3L/Week****Credit Point: 3****No. of Lectures: 36****Prerequisite:**

Basic understanding of relevant psychological theories and approaches

Course Objective(s):

The Student Should Be Made to:

Learn The Foundations of Human Computer Interaction

Be Familiar with The Design Technologies for Individuals and Persons with Disabilities

Be Aware of Mobile HCI

Learn The Guidelines for User Interface

Course Outcome(s):

Upon Completion of the Course, The Student Should Be Able to:

CS-A-602.1: Design Effective Dialog for HCI.**CS-A-602.2:** Design Effective HCI for Individuals and Persons with Disabilities.**CS-A-602.3:** Assess The Importance of User Feedback.**CS-A-602.4:** Explain The HCI Implications for Designing Web Sites.**CS-A-602.5:** Develop Meaningful User Interface.**Course Content:****Module 1 : FOUNDATIONS OF HCI [7L]**

The Human: I/O Channels – Memory – Reasoning And Problem Solving; The Computer: Devices – Memory – Processing And Networks; Interaction: Models – Frameworks – Ergonomics – Styles – Elements – Interactivity- Paradigms.

Module 2: DESIGN & SOFTWARE PROCESS [7L]

Interactive Design Basics – Process – Scenarios – Navigation – Screen Design – Iteration And Prototyping. HCI in Software Process – Software Life Cycle – Usability Engineering – Prototyping in Practice – Design Rationale. Design Rules – Principles, Standards, Guidelines, Rules. Evaluation Techniques – Universal Design.

Module 3 : MODELS AND THEORIES**[7L]**

Cognitive Models –Socio-Organizational Issues And Stake Holder Requirements – Communication And Collaboration Models-Hypertext, Multimedia And WWW.

Module 4 : MOBILE HCI [7L]

Mobile Ecosystem: Platforms, Application Frameworks- Types of Mobile Applications: Widgets, Applications, Games- Mobile Information Architecture, Mobile 2.0, Mobile Design: Elements of Mobile Design, Tools.

Module 5 : WEB INTERFACE DESIGN [8L]

Designing Web Interfaces – Drag & Drop, Direct Selection, Contextual Tools, Overlays, Inlays And Virtual Pages, Process Flow. Case Studies.

Text Books:

1. Alan Dix, Janet Finlay, Gregory Abowd, Russell Beale, “Human Computer Interaction”, 3rd Edition, Pearson Education, 2004 (Module I, II & III)
2. Brian Fling, “Mobile Design and Development”, First Edition, O'Reilly Media Inc., 2009 (Module –IV)
3. Bill Scott and Theresa Neil, “Designing Web Interfaces”, First Edition, O'Reilly, 2009. (Module-V)

Recommended books:

1. Preece J, Rogers Y, Sharp H, Baniyon D., Holland S. and Carey T. Human Computer Interaction, Addison-Wesley, 1994.
2. B. Shneiderman; Designing the User Interface, Addison Wesley 2000 (Indian Reprint).

Name of the Paper: Introduction to Internet of Things

Paper Code: CS-601A

Contact (Periods/Week):3L/Week

Credit Point: 3

No. of Lectures: 36

Prerequisite:

1. Fundamental knowledge in computer networking.

2. Basic knowledge of Microcontroller fundamentals.

Course Objective(s):

Students will understand the concepts of Internet of Things and can able to build IoT applications.

Course Outcomes:

On completion of the course students will be able to

CS-601A.1: Understand and differentiate the concepts of Internet of Things and Internet

CS-601A.2: Identify appropriate MAC protocols and routing protocols while solving a problem

CS-601A.3: Analyze and compare the basic protocols in wireless sensor network and IoT

CS-601A.4: Solve different real life problems in different domains based upon the concept of IoT and sensor network

CS-601A.5: Implement basic IoT applications on embedded platform.

Course Content:

Module 1: [7L]

Fundamental of IoT

The Internet of Things, Time for Convergence, Towards the IoT Universe, Internet of Things Vision, IoT Strategic Research and Innovation Directions, IoT Applications, Future Internet Technologies, Infrastructure, Networks and Communication, Design challenges, Development challenges, Security challenges, Other challenges.

Module 2: [6L]

Wireless Sensor Network

Network & Communication aspects, Wireless medium access issues, MAC protocol, routing protocols, Sensor deployment & Node discovery, Data aggregation & dissemination.

Module 3: [7L]

IoT and M2M

A Basic Perspective– Introduction, Some Definitions, M2M Value Chains, IoT Value Chains, An emerging industrial structure for IoT, The international driven global value chain and global information monopolies. M2M to IoT-An Architectural Overview– Building an architecture, Main design principles and needed capabilities, An IoT architecture outline, standards considerations.

Module 4: [7L]

IoT Architecture

Introduction, Architecture Reference Model- Introduction, Reference Model, and architecture, IoT reference Model, IoT Reference Architecture- Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views.

Module 5: [5L]

IoT Applications for Value Creations

Introduction to Arduino and Raspberry Pi, Cloud Computing, Fog Computing, Connected

Vehicles, Data Aggregation for the IoT in Smart Cities, Introduction, IoT applications for industry: Future Factory Concepts, Brownfield IoT, Smart Objects, Smart Applications, Four Aspects in your Business to Master IoT, Value Creation from Big Data and Serialization, IoT in health care, Value for Industry, smart home Management.

Module 6: [4L]

Internet of Things Privacy, Security and Governance

Introduction, Overview of Governance, Privacy and Security Issues, Trust in IoT-Data-Platforms for Smart Cities, First Steps Towards a Secure Platform, Smartie Approach. Data Aggregation for the IoT in smart cities, Security.

Text books:

Name of the Paper: Bio-informatics

Paper Code: CS- 601B

Contact (Periods/Week): L-T-P=3-0-0

Credit Point: 3

No. of Lectures: 35

Course Objective(s):

The student should made to:

Be familiar with the modelling techniques.

Learn microarray analysis.

Exposed to Pattern Matching and Visualization.

Outcomes:

The students will be able to upon completion of the course,
 Develop models for biological data
 Apply pattern matching techniques to bioinformatics data – protein data genomic data.
 Apply micro array technology for genomic expression study

Course Outcome(s):

CS-601B .1 To acquire the knowledge of Bioinformatics technologies with the related concept of DNA, RNA and their implications

CS-601B .2 To develop idea in MOLECULAR BIOLOGY

CS-601B .3 To understand the concept and techniques of different types of Data Organization and Sequence Databases with different types of Analysis Tools for Sequence Data Banks

CS-601B .4 To acquire the knowledge of the DNA SEQUENCE ANALYSIS

CS-601B .5 To analyse the performance of different types of Probabilistic models used in Computational Biology.

Couse Content:

Module -1: [7L]

INTRODUCTION TO MOLECULAR BIOLOGY:

Concepts of Cell, tissue, types of cell, components of cell, organelle. Functions of different organelles. Concepts of DNA: Basic Structure of DNA; Double Helix structure; Watson and crick model. Exons and Introns and Gene Concept.

Concepts of RNA : Basic structure, Difference between RNA and DNA. Types of RNA.

Concept of Protein: Basic components and structure. Introduction to Central Dogma: Transcription and Translation, Introduction to Metabolic Pathways.

Introduction to Bioinformatics. Recent challenges in Bioinformatics.

Module -2: [10L]

Introduction to Genomic data, Data Organization and Sequence Databases: Sequence Data Banks - Introduction to sequence data banks - protein sequence data bank. Signal peptide data bank, Nucleic acid sequence data bank - GenBank, AIDS virus sequence data bank. RRNA data bank, structural data banks - protein Data Bank (PDB), The Cambridge Structural Database (CSD) : Genome data bank - Metabolic pathway data : Microbial and Cellular Data Banks.

Introduction to MSDN (Microbial Strain Data Network): Numerical Coding Systems of Microbes, Hibridoma Data Bank Structure, Virus Information System Cell line information system; Protein Sequence Databases, DNA sequence databases. sequence database search programs like BLAST and FASTA. NCBI different modules: GenBank; OMIM, Taxonomy browser, PubMed;

Module 3: [8L]

DNA SEQUENCE ANALYSIS

DNA Mapping and Assembly : Size of Human DNA ,Copying DNA: Polymerase Chain Reaction (PCR), Hybridization and Microarrays, Cutting DNA into Fragments, Sequencing Secondary Structure predictions;

prediction algorithms; Chao-Fasman algorithm, Hidden-Markov model, Neural Networking.

Tertiary Structure predictions;

prediction algorithms; Chao-Fasman algorithm, Hidden-Markov model, Neural Networking.

Module -4: [10L]

Introduction Probabilistic models used in Computational Biology:

Probabilistic Models;

Gene Regulatory Method Application of HMM in Bioinformatics : Genefinding, profile searches, multiple sequence alignment and regulatory site identification.

Applications in Biotechnology

: Protein classifications, Fold libraries, Protein structure prediction: Fold recognition (threading), Protein structure predictions : Comparative modeling (Homology), Advanced topics: Protein folding, Protein-ligand interactions, Molecular Modeling& Dynamics, Drug Designing.

Paper Name: Robotics

Code: CS- 601C

Contacts: 3L

Credits: 3

Allotted hours: 35L

Prerequisite:

Microprocessor & Microcontroller

Computer Organization & Architecture

Course Objective(s):

To study microcontroller operations for robotics

To study how different interfaces are implemented in a microcontroller.

To learn how Microchip PIC micro PIC16F627 can be erased and reprogrammed

To learn how different sensors, outputs, and peripherals can be wired to a microcontroller to work cooperatively and create a high-level control program.

To design robots in a real time environment.

Course Outcome(s):

After the successful completion of this course, the student will be able to:

CS- 601C .1 To describe and explain the microcontrollers used the in robots.

CS- 601C .2. To design the software and build the prototype of robots.

CS- 601C .3. To apply localization and mapping aspects of mobile robotics.

CS- 601C .4. To demonstrate self-learning capability.

Course contents:

Module 1[5L]

Brief history, types, classification and usage, Science and Technology of robots, Some useful websites, textbooks and research journals.

Position and orientation of a rigid body, Homogeneous transformations, Representation of joints, link representation using D-H parameters, Examples of D-H parameters and link transforms, different kinds of actuators – stepper, DC servo and brushless motors, model of a DC servo motor, Types of transmissions, Purpose of sensors, internal and external sensors, commonsensors – encoders, tachometers, strain gauge based force-torque sensors, proximity and distance measuring sensors, and vision.

Module 2 [8L]

Introduction, Direct and inverse kinematics problems, Examples of kinematics of common serial manipulators, workspace of a serial robot, Inverse kinematics of constrained and redundant robots, Tractrix based approach for fixed and free robots and multi-body systems, simulations and experiments, Solution procedures using theory of elimination, Inverse kinematics solution for the general 6R serial manipulator.

Degrees-of-freedom of parallel mechanisms and manipulators, Active and passive joints, Constraint and loop-closure equations, Direct kinematics problem, Mobility of parallel manipulators, Closed-form and numerical solution, Inverse kinematics of parallel manipulators and mechanisms, Direct kinematics of Gough-Stewart platform.

Module 3[8L]

Linear and angular velocity of links, Velocity propagation, Manipulator Jacobians for serial and parallel manipulators, Velocity ellipse and ellipsoids, Singularity analysis for serial and parallel manipulators, Loss and gain of degree of freedom, Statics of serial and parallel manipulators, Statics and force transformation matrix of a Gough-Stewart platform, Singularity analysis and statics.

Mass and inertia of links, Lagrangian formulation for equations of motion for serial and parallel manipulators.

Module 4[9L]

Joint and Cartesian space trajectory planning and generation, Classical control concepts using the example of control of a single link, Independent joint PID control, Control of a multi-link manipulator, Non-linear model based control schemes, Simulation and experimental case studies on serial and parallel manipulators, Control of constrained manipulators, Cartesian control, Force control and hybrid position/force control, Advanced topics in non-linear control of manipulators.

Module 5[5L]

Introduction and some well-known wheeled mobile robots (WMR), two and three-wheeled WMR on flat surfaces, Slip and its modelling, WMR on uneven terrain, Design of slip-free motion on uneven terrain, Kinematics, dynamics, and static stability of a three-wheeled WMR 's on uneven terrain, Simulations using MATLAB and ADAMS.

Introduction to chaos, Non-linear dynamics and chaos in robot equations, Simulations of planar 2 DOF manipulators, Analytical criterion for unforced motion. Gough-Stewart platform and its singularities, use of near singularity for fine motion for sensing, design of Gough-Stewart platform based sensors. Over-constrained mechanisms and deployable structures, Algorithm to obtain redundant links and joints, Kinematics and statics of deployable structures with pantographs or scissor-like elements (SLE's).

B.Practical

Course Name: Computer Networks Lab

Course Code: CS691

Contact: 0:0:3

Credit Point: 1.5

Prerequisites:

1. Familiarity and knowledge of Computer Network and Computer Architecture
2. Also require strong knowledge of programming languages like C, Java and UNIX or Linux environment.

Course Outcomes:

On completion of the course students will be able

CS691.1: To define and demonstrate the socket program using TCP & UDP.

CS691.2: To express and develop simple applications using TCP & UDP.

CS691.3: To experiment code for data link layer protocol simulation.

CS691.4: To explain the performances of routing protocol.

CS691.5: To experiment and simulate congestion control algorithm using network simulator

Course Contents:

1. Familiarization of UNIX or Linux environment, UNIX or Linux general Commands specially Network Commands. Familiarization of Internetworking - Network Cables - Color coding - Crimping. Internetworking Operating Systems - Configurations. [6L]
2. Socket Programming using TCP and UDP [18L]
3. Implementing routing protocols such as RIP, OSPF. [2L]
4. Familiarization of advanced simulators like Packet Tracer, NS2/NS3, OMNET++, TinyOS[4L]
5. Server Configuration: only web server (If time permit, Instructor can do more than that) [6L]

Textbooks:

1. TCP sockets in C Programs-Practical guide for Programmers By Micheal, J Donahoo and Kenneth L calvert.
2. Socket Programming by Raj Kumar Buyaa.

Course Name: Software Engineering Lab

Course Code: CS 692

Contact: 3:0:0

Total Contact Hours: 36

Credits: 1.5

Prerequisites:

Programming for Problem Solving

Course Outcomes

On completion of the course students will be able

CS692.1: To identify software development models.

CS692.2: To prepare SRS document, design document, project management related document.

CS692.3: To validate function oriented and object-oriented software design using tools

CS692.4: To adapt various testing techniques through test cases

Course Content:

Module-1:[6L]

Preparation of requirement document for standard application problems in standard format. (e.g., Library Management System, Railway Reservation system, Hospital management System, University Admission system). DFD of standard application problems.

Module-2: [6L]

Software Requirement Analysis: Describe the individual Phases/ modules of the project, Identify deliverables. Compute Process and Product Metrics (e.g Defect Density, Defect Age, Productivity, Cost etc.) Estimation of project size using Function Point(FP) for calculation.

Cost Estimation models. L

Module-3: [6L]

Use Case diagram, Class Diagram, Sequence Diagram, Activity Diagram and prepare Software Design Document using tools like Rational Rose.(For standard application problems)

Module-4:[9L]

Software Development, Coding Practice and Debugging, Design Test Script/Test Plan(both Black box and White Box approach)

Module-5:[9L]

Software project management, Project planning and control, configuration control, cost estimation, project scheduling using PERT and GANTT charts, cost-time relations using standard tools.

Course Name: Microprocessors & Microcontrollers Lab

Course Code: CS-T-691

Contact: 0:0:3

Credits: 1.5

Prerequisites:

1. Familiarity with the numbersystem
2. A solid background in digital logic and implementation of digital circuit in a breadboard.

Course Objective(s):

- To learn the assembly language programming of amicroprocessor.
- To learn the assembly language programming of amicrocontroller.
- To learn the interfacing ofmicroprocessor.
- To be familiar with microprocessor and microcontroller basedprojects.

Course Outcomes:

On completion of the course students will be able

CS-T-691.1: To understand and apply the fundamentals of assembly level programming of microprocessors and microcontroller

CS-T-691.2: To execute code with standard microprocessor real time interfaces including GPIO, serial ports, digital-to-analog converters and analog-to-digital converters.

CS-T-691.3: To analyze abstract problems and apply a combination of hardware and software to address the problem

CS-T-691.4: To detect the interactions between software and hardware

CS-T-691.5: Programming for evaluate digital interfaces

Course Contents:

Module -1: [3L]

Study of Prewritten programs on 8085 trainer kit using the basic instruction set (data transfer,Load/Store, Arithmetic, Logical).

Or,

Familiarization with 8085 simulator on PC.

Programs using basic instruction set (data transfer,Load/Store, Arithmetic, Logical) on the simulator.

Module -2: [24L]

Programming using kit or Simulator for:

1. Table lookup
2. Copying a block ofmemory
3. Shifting a block ofmemory
4. Packing and unpacking of BCDnumbers
5. Addition of BCDnumbers
6. Binary to ASCII conversion and vice-versa (Using SubroutineCall)
7. BCD to Binary Conversion andvice-versa

8. HCF of two numbers
9. Addition of numbers using subroutine
10. Clearing the flag register

Module -3: [3L]

Study of Prewritten programs on 8051 Microcontroller Kit using the basic instruction set (data transfer, Load/Store, Arithmetic, Logical).

Or,

Familiarization with 8051 Simulator on PC.

Study of prewritten programs using basic instruction set (data transfer, Load/Store, Arithmetic, Logical).

Text Books:

1. MICROPROCESSOR architecture, programming and Application with 8085 - R. Gaonkar (Penram international Publishing LTD.)
2. Fundamentals of Microprocessor and Microcontrollers - B. Ram (Paperback)
3. 8051 Microcontroller – K. Ayala (Cengage Learning)

Reference books:

1. The 8051 microcontroller and Embedded systems - Mazidi, Mazidi and McKinley (PEARSON)

Course Name: Advanced Operating Systems Lab

Course Code: CS-S-691

Contact: 0:0:3

Total Contact Hours: 36

Credits: 1.5

Prerequisites: Operating Systems

Course Objective(s):

The objective of the course is to make the students able to -

- Understand and execute basic commands of shell script
- Apply basic operations in shell scripts which are required for different applications.
- Identify and understand concept of file systems in shell script
- able to understand the concept of creating new process from parent process.
- Able to understand concept of virtual file and execute basic commands on it

Course Outcome(s):

After completion of the course students will be able to

CS-S-691.1: Understand and implement basic services and functionalities of the operating system using system calls and able to Understand the benefits of thread over process and implement synchronized programs using multithreading concepts.

CS-S-691.2: Analyze the design aspects and issues of distributed operating systems.

CS-S-691.3: Analyze and simulate CPU Scheduling Algorithms like FCFS, Round Robin, SJF, and Priority.

CS-S-691.4: Implement memory management schemes and page replacement schemes

CS-S-691.5: Understand the concepts of deadlock in operating systems and implement them in Multiprogramming system.

Course Content:

Preliminaries of Operating System: 6P

managing users, managing systems, file managements, useful commands, Shell scripting : shell syntax, executing shell scripts.

Process : 12P

creating new process, counting maximum number of processes a system can handle at a time, handling system calls; inter process communication through pipes and message passing, zombie process, orphan process.

Process Synchronization: 6P

handling threads and semaphores to achieve synchronization among processes using POSIX standard functions.

Signal : 6P

study of some POSIX signals (SIGINT, SIGILL, SIGFPE, SIGKILL, SIGHUP, SIGALRM, SIGABRT).

Text book:

1. Mukesh Singhal and Niranjana Shivaratri, Advanced Concepts in Operating Systems, McGraw-Hill.

Reference Books:

Course Name: Machine Learning Lab

Course Code: CS-D-691

Contact:0:0:3

Total Contact Hours: 36

Credits: 1.5

Course Objective(s):

This course will enable students to

- Make use of Data sets in implementing the machine learning algorithms
- Implement the machine learning concepts and algorithms in any suitable language of choice

Course Outcome(s):

The students should be able to:

CS-D-691.1. Understand the implementation procedures for the machine learning algorithms.

CS-D-691.2. Design Java/Python programs for various Learning algorithms.

CS-D-691.3. Apply appropriate data sets to the Machine Learning algorithms.

CS-D-691.4. Identify and apply Machine Learning algorithms to solve real world problems.

List of Lab Experiments:

1. Implement and demonstrate the FIND-S algorithm for finding the most specific hypothesis based on a given set of training data samples. Read the training data from a .CSV file.
2. For a given set of training data examples stored in a .CSV file, implement and demonstrate the Candidate-Elimination algorithm to output a description of the set of all hypotheses consistent with the training examples.
3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
4. Build an Artificial Neural Network by implementing the Back propagation algorithm and test the same using appropriate data sets.
5. Write a program to implement the naive Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
6. Assuming a set of documents that need to be classified, use the naive Bayesian Classifier model to perform this task. Built-in Java classes/API can be used to write the program. Calculate the accuracy, precision, and recall for your data set.
7. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Java/Python ML library classes/API.
8. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Java/Python ML library classes/API in the program.
9. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Java/Python ML library classes can be used for this problem.
10. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.

Name of the Paper: Web and Internet Technology Lab**Paper Code: CS-A-691****Contact (Periods/Week): 3P/Week****Credit Point: 2****No. of Lectures: 30****Prerequisite:**Fundamentals of Programming**Course Objective(s):**

- To impart the design, development and implementation of Static and Dynamic Web Pages
- To develop programs for Web using Scripting Languages and .net framework
- To give an overview of Server-Side Programming in Web

Course Outcome(s):**CS-A-691.1:** To develop interactive web pages using HTML, DHTML, CSS and image map**CS-A-691.2:** To procure the knowledge of information interchange formats like XML**CS-A-691.3:** To validate fields of web pages using scripting languages like JavaScript**CS-A-691.4:**To acquire the server side programming concepts using servlet, JSP**List of Experiments:**

1. Write a single html program through which you can explain a) anchor tag, b)'img' tag with 'src' attribute, c) paragraph d) heading.
2. Write a single html program through which you can draw a table which consists of 3 row and 4 columns where 1st row contains 4 different column fields of a student's information with red text color and Calibri font style with font 12. Rest cells of whole table contain values with blue text color and Times new roman font style with font 10.
3. Write a single html program where 1st paragraph can collect its specified style from internal stylesheet describes inside that html program and 2nd paragraph can collect its specified style from another file (external stylesheet).
4. Write a single html program which implements image map concept using 'usemap' and <map>.
5. Write a html program to find out Celsius temperature of a given Fahrenheit temperature using JavaScript.
6. Write a xml parsing technique through which parse a text string into an XML DOM object and extracts the info from it with JavaScript.
7. Write a html program to find out m to the power n (m, n valid integer no) using a function using JavaScript.
8. Write a simple java script program to print the weekday and time.
9. Write a simple java script program to implement the function using the argument and no argument both.
10. Write a simple program in ASP.net through which you can create a login page of your own

website.

11. Write a simple JSP program through which you can print even and odd no separately within a given range.
12. Create an Online Registration form for individual user of an website using Servlet.

B. Mandatory Course

Course Name: Intellectual Property Right

Course Code: MC 601

Contacts: 2L:0T:0P

Total Contact Hours: 24

Credit: 0

Prerequisite: None

Course Outcome(s):

On successful completion of the learning sessions of the course, the learner will be able to:

MC 601.1: Explain fundamental aspects of Intellectual property Rights to students

MC 601.2: To disseminate knowledge on patents, patent regime in India and abroad and registration aspects

MC 601.3: To disseminate knowledge on copyrights and its related rights and registration aspects

MC 601.4: To disseminate knowledge on trademarks and registration aspects

MC 601.5: To disseminate knowledge on Design, Geographical Indication (GI), Plant Variety and Layout Design Protection and their registration aspects

MC 601.6: To aware about current trends in IPR and Govt. steps in fostering IPR

Course Content:**Module 1: [4L]**

Overview of the IPR: Introduction and the need for intellectual property right (IPR) - Kinds of Intellectual Property Rights: Patent, Copyright, Trade Mark, Design, Geographical Indication, Plant Varieties and Layout Design – Genetic Resources and Traditional Knowledge – Trade Secret - IPR in India : Genesis and development – IPR in abroad - International organizations. Agencies and treaties,

Module 2:[4L]

Patents- Trips Definition, kind of inventions protected by patent-Patentable and Non patentable inventions. Elements of Patentability: Novelty , Non Obviousness (Inventive Steps), Legal requirements for patents — Granting of patent - Rights of a patent-exclusive right. Patent application process: Searching a patent- Drawing of a patent- Filing of a patent- Types of patent applications- Patent document: specification and Claims. Registration Procedure, Rights and Duties of Patentee, Restoration of lapsed Patents, Surrender and Revocation of Patents, Infringement, Remedies & Penalties

Module 3: [4L]

Trademarks- Concept of Trademarks - Different kinds of marks (brand names, logos, signatures, symbols, well known marks, certification marks and service marks) - Non Registrable Trademarks - Registration of Trademarks - Rights of holder and assignment and licensing of marks - Infringement, Remedies & Penalties - trade mark registration processes.

Module 4:[4L]

Copyrights- Right and protection covered by copyright - Law of copy rights: Fundamental of copyright law. originality **of material**, rights of reproduction, rights to perform the work publicly, copy right ownership issues, obtaining copy right registration, notice of copy right. International copy right law. Infringement of Copyright under Copyright Act
The Role and Liabilities of IPRs in India - Cyberlaw issues: Criminal law. data safety, online privacy. Health privacy, Freedom of expression and human rights, net neutrality, national security.

Module 5: [4L]

Geographical Indication of Goods: Types, why and how GI need protection and GI laws. Indian GI act. Industrial Designs: protection. Kind of protection provided by industrial designs. Integrated Circuits

Module 6: [4L]

India's New National IP Policy, 2016 – Govt. of India step towards promoting IPR – Govt. Schemes IPR – Career Opportunities in IP - IPR in current scenario with case studies

Text book:

1. Fundamentals of IP for Engineers: K.Bansal & P.Bansal

Syllabus of 7th Semester

A. Theory

Course Name: Information Theory and Coding

Course Code: CS-T-701

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Probability & Statistics

Course Objective(s):

The objective of the course is to make the students able to

- Understand the basic concept of information and apply this knowledge in designing solution.
- Understand the basic concept of coding theory and use this knowledge for designing and implementing problem.
- Understand the concept of channel models to determine the mutual information in the channels.
- Outline the concept of error detection techniques and design a model for building a new solution.

- Understand how convolutional theory works and develop a new approach.

Course Outcome(s):

After completion of the course students will be able to

CS-T-701.1: Understand the basic concept of information and apply this knowledge in designing solution for real life engineering problem.

CS-T-701.2: Understand the basic concept of coding theory and use this knowledge for designing and implementing mathematical and engineering problem leading to lifelong learning.

CS-T-701.3: Understand the concept of channel models to determine the mutual information in the channels.

CS-T-701.4: Outline the concept of error detection techniques and design a model for building a new solution as a professional engineering practice as a team.

CS-T-701.5: Understand how convolutional theory works and develop an approach to solve it by means of existing and new methods as a team work.

Course Content:

Module 1:

Information Theory [4L]

Introduction, Measure of Information, Average Information Content (Entropy) of a Zero Memory Source, Extension of Zero Memory Source, Entropy of a Source with Memory.

Module 2:

Source Coding [9L]

Introduction, Types of Codes, Prefix Codes, Source Coding Theorem, Shannon's Encoding Theorem, Huffman Coding, Arithmetic Coding, Lempel-Ziv Algorithm, Run Length Encoding, An Overview on Speech and Image Compression.

Module 3:

Information

Channels [4L]

Introduction, Channel Models, System Entropies, Mutual Information (Trans information), Channel Capacity, Capacity of Channels, Continuous Channels.

Module 4:

Error Control Coding [8L]

Introduction, need for Error Control Coding, Types of Codes, Coding Gain, Linear Block Codes, The Hamming Codes, Probability of an Undetected Error Pattern for an LBC over a BSC, Equivalent Codes, Cyclic Codes, Golay Codes, Shortened Cyclic Codes.

Module 5:

Burst Error Correcting Codes [6L]

Introduction, Burst Errors, Interleaved Codes, Product Codes, Fire Codes, BCH Codes, Non-Binary BCH Codes and Reed-Solomon Codes.

Module 6:

Convolution

Codes [5L]

Introduction, Convolution Encoder, Representation of Convolution Code, Transfer Function of a Convolution Code, Distance Properties of Convolution Codes, Decoding of Convolution Codes, Stack Algorithm, Known Good Convolution Codes.

Textbook:

1. Information theory, coding and cryptography - Ranjan Bose; TMH.
2. Information and Coding - N Abramson; McGraw Hill.

Reference Books:

1. Introduction to Information Theory - M Mansurpur; McGraw Hill.
2. Information Theory - R B Ash; Prentice Hall.
3. Error Control Coding - Shu Lin and D J Costello Jr; Prentice Hall.

Paper name: Ad-Hoc and Sensor Networks**Paper code: CS-S-701****Contact: 0:0:3****Credit Point: 3****Course Objective(s):**

The student should be made to:

- Learn Ad hoc network and Sensor Network fundamentals
- Understand the different routing protocols
- Have an in-depth knowledge on sensor network architecture and design issues
- Understand the transport layer and security issues possible in Ad hoc and Sensor networks
- Have an exposure to mote programming platforms and tools

Course Outcome(s):

At the end of the course, the student would be able to:

CS-S-701.1: Know the basics of Ad hoc networks and Wireless Sensor Networks**CS-S-701.2:** Apply this knowledge to identify the suitable routing algorithm based on the network and user requirement**CS-S-701.3:** Apply the knowledge to identify appropriate physical and MAC layer protocols**CS-S-701.4:** Understand the transport layer and security issues possible in Ad hoc and sensor networks.**CS-S-701.5:** Be familiar with the OS used in Wireless Sensor Networks and build basic modules

Course Content:**Module1****AD HOC NETWORKS – INTRODUCTION AND ROUTING PROTOCOLS**

Elements of Ad hoc Wireless Networks, Issues in Ad hoc wireless networks, Example commercial applications of Ad hoc networking, Ad hoc wireless Internet, Issues in Designing a Routing Protocol for Ad Hoc Wireless Networks, Classifications of Routing Protocols, Table Driven Routing Protocols – Destination Sequenced Distance Vector (DSDV), On–Demand Routing protocols –Ad hoc On–Demand Distance Vector Routing (AODV).

Module2**SENSOR NETWORKS – INTRODUCTION & ARCHITECTURES**

Challenges for Wireless Sensor Networks, Enabling Technologies for Wireless Sensor Networks, WSN application examples, Single-Node Architecture – Hardware Components, Energy Consumption of Sensor Nodes, Network Architecture – Sensor Network Scenarios, Transceiver Design Considerations, Optimization Goals and Figures of Merit.

Module3**WSN NETWORKING CONCEPTS AND PROTOCOLS**

MAC Protocols for Wireless Sensor Networks, Low Duty Cycle Protocols And Wakeup Concepts – S-MAC, The Mediation Device Protocol, Contention based protocols – PAMAS, Schedule based protocols – LEACH, IEEE 802.15.4 MAC protocol, Routing Protocols, Energy Efficient Routing, Challenges and Issues in Transport layer protocol.

Module4**SENSOR NETWORK SECURITY**

Network Security Requirements, Issues and Challenges in Security Provisioning, Network Security Attacks, Layer wise attacks in wireless sensor networks, possible solutions for jamming, tampering, black hole attack, flooding attack. Key Distribution and Management, Secure Routing – SPINS, reliability requirements in sensor networks.

Module5**SENSOR NETWORK PLATFORMS AND TOOLS**

Sensor Node Hardware – Berkeley Motes, Programming Challenges, Node-level software platforms – TinyOS, nesC, CONTIKIOS, Node-level Simulators – NS2 and its extension to sensor networks, COOJA, TOSSIM, Programming beyond individual nodes – State centric programming.

Course Name: Data Mining and Data Warehousing

Course Code: CS-D-701

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Data Structure, Design and Analysis of Algorithms, Database Management Systems, Statistics, Artificial Intelligence

Course Outcome(s):

After completion of the course students will be able to

CS-D-701.1: Understand and explain the fundamental concepts of the evolving technologies in Data Mining (such as Mining Frequent Patterns and Data Streams, Associations, Supervised and Unsupervised Learning, Graph Mining, Web Mining etc.) and Data Warehousing (such as Data Cube and OLAP) recognizing their utilitarian importance in current technological context for further exploration leading towards lifelong learning.

CS-D-701.2: Identify and formulate an engineering problem within the scope of Data Mining and Data Warehousing paradigm.

CS-D-701.3: Explore relevant literature and apply the concepts of Data Mining and Data Warehousing to solve problems of making automated decisions dealing with huge amount of data.

CS-D-701.4: Develop ideas for proposing solutions to the challenging problems of Data

Mining and Data Warehousing.

CS-D-701.5: Implement ideas of Data Mining and Data Warehousing through developing feasible algorithms or frameworks and investigate their effectiveness by analyzing the performances in solving the relevant problems.

Course Content:

Module-1: Introduction to Data Mining[5L]

Basic Concepts 1L

Data Exploration: Data Types, Data Attributes, Statistical Description of Data, Data Visualization, Data Similarity Measure 2L

Data Preprocessing: Data Cleaning, Data Integration, Data Reduction, Data Transformation & Discretization 2L

Module-2: Introduction to Data Warehousing [6L]

Basic Concepts 1L

Data Warehouse Modeling: Data Cube and OLAP (OnLine Analytical Processing) 2L

Data Warehouse Design, Usage, Implementation 2L

Data Generalization by Attribute-Oriented Induction 1L

Module-3: Mining Frequent Patterns, Associations And Correlation Analysis [5L]

Basic Concepts, Frequent Itemset Mining Methods: The Apriori Algorithm, Mining Frequent Item Sets without Candidate Generation, Mining Frequent Item Sets Using Vertical Data Format, Correlation Analysis 4L

Pattern Mining in Multilevel and Multidimensional Space 1L

Module-4: Classification and Regression [6L]

Basic Concepts, k-Nearest-Neighbor Classifier, Decision Tree Classifier, Naïve Bayes Classifier 3L

ANN-Backpropagation Based Classifier, Support Vector Machine Based Classifier, Linear and Nonlinear Regression Methods 3L

Module-5: Clustering and Outlier Analysis [5L]

Basic Concepts, Partitioning Methods: k-Means and k-Medoids, Hierarchical Methods: Agglomerative and Divisive Hierarchical Clustering, Density-Based Methods: DBSCAN: Density-Based Clustering Based on Connected Regions with High Density, Frequent Pattern-Based Clustering Method 4L

Outlier Analysis 1L

Module-6: Mining Data Stream, Time-Series, and Sequence Data [3L]

Basic Concepts of Data Stream Mining 1L

Mining Time Series Data 1L

Mining Sequence Patterns in Biological Data 1L

Module-7: Introduction to Graph Mining, Social Network Analysis, Multi-relational Data Mining, Text Mining and World Wide Web (WWW) Mining 6L

Graph Mining: Methods for Mining Frequent Subgraphs (Apriori-based Approach & Pattern Growth Approach) 2L

Basic Concepts of Social Network Analysis and Multi-relational Data Mining 2L

Basic Concepts of Text Mining 1L

Basic Concepts of World Wide Web (WWW) Mining 1L

Textbook:

Paper Name: Cloud Computing**Code: CS-A-701****Contacts: 3:0:0****Credits: 3****Total Contact hours: 36L****Prerequisite**

1. Should have the basic knowledge of Operating Systems.
2. Should be aware of the fundamental concepts of Networking.
3. Should have knowledge of heterogeneous systems and resource management.

Course Objective(s):

- To learn the workflow of cloud business model and optimized resource allocation.
- To gain knowledge of cloud service and delivery models and develop an understanding of the risk and compliance responsibilities and Challenges for each Cloud type and service delivery model.
- To learn virtualization techniques, load balancing, and work strategy of different cloud infrastructure.
- To know the security and privacy issues in cloud infrastructure

Course Outcomes:

After completion of course, students would be able:

CS-A-701.1: To identify the business model concepts, architecture and infrastructure of cloud computing, including cloud service models and deployment models.

CS-A-701.2: To journaling some important cloud computing driven commercial systems such as Google Apps, Microsoft Azure and Amazon Web Services and other business applications

CS-A-701.3: To articulate and design suitable Virtualization concept, Cloud Resource Management and design scheduling algorithms.

CS-A-701.4: To categorize the core issues of cloud computing such as security, privacy, interoperability, and its impact on cloud application.

Course Contents:**Module 1: Definition of Cloud Computing and its Basics [8L]**

Definition of Cloud Computing: Defining a Cloud, Cloud Types – NIST model, Cloud Cube model, Deployment models (Public, Private, Hybrid and Community Clouds), Service models – Infrastructure as a Service, Platform as a Service, Software as a Service with examples of services/ service providers, Cloud Reference model, Characteristics of Cloud Computing – a shift in paradigm Benefits and advantages of Cloud Computing [3]

Cloud Architecture: Cloud Infrastructure, Architecture of each components, Virtualization versus Traditional Approach, Virtualization Model for Cloud Computing. [2]

Services and Applications by Type [3]

IaaS – Basic concept, Workload, partitioning of virtual private server instances, Pods, aggregations, silos.

PaaS – Basic concept, tools and development environment with examples

SaaS - Basic concept and characteristics, Open SaaS and SOA, examples of SaaS platform

Identity as a Service (IDaaS) Compliance as a Service (CaaS)

Module 2: Use of Platforms in Cloud Computing [6L]

Concepts of Abstraction and Virtualization [2L]

Virtualization technologies: Types of virtualization, Load Balancing and Virtualization: Basic Concepts, Network resources for load balancing; Classification of Virtualization Environment: Scheduling-based Environment, Load-Distribution-Based Environment, Energy Aware-Based Environment, Operational-Based Environment, Distributed Pattern-Based Environment, Transactional-Based Environment

Mention of The Google Cloud as an example of use of load balancing Hypervisors: Virtual machine technology and types, VMware vSphere Machine imaging (including mention of Open Virtualization Format – OVF) [2L]

Porting of applications in the Cloud: The simple Cloud API and AppZero Virtual Application appliance

Concepts of Platform as a Service [2L]

Definition of services, Distinction between SaaS and PaaS (knowledge of Salesforce.com and Force.com), Application development. Use of PaaS Application frameworks.

Module 3: Cloud Service Models [6L]

Use of Google Web Services [2L]

Discussion of Google Applications Portfolio – Indexed search, Dark Web, Aggregation and disintermediation, Productivity applications and service, Adwords, Google Analytics, Google Translate, a brief discussion on Google Toolkit (including introduction of Google APIs in brief), major features of Google App Engine service.

Use of Amazon Web Services [2L]

Amazon Web Service components and services: Amazon Elastic Cloud, Amazon Simple Storage system, Amazon Elastic Block Store, Amazon SimpleDB and Relational Database Service

Use of Microsoft Cloud Services [2L]

Windows Azure platform: Microsoft's approach, architecture, and main elements, overview of Windows Azure AppFabric, Content Delivery Network, SQL Azure, and Windows Live services

Module 4: Cloud Infrastructure [10L]

Types of services required in implementation – Consulting, Configuration, Customization and Support

Cloud Management [3L]

An overview of the features of network management systems and a brief introduction of related products from large cloud vendors, Monitoring of an entire cloud computing deployment stack – an overview with mention of some products, Lifecycle management of cloud services (six stages of lifecycle)

Live Migration of Virtual Machines: [2L]

Need of Live Migration of Virtual Machine, A Designing Process of Live Migration, and Security Issues during live migration.

Concepts of Cloud Security [3L]

Infrastructure Security, Infrastructure Security: The Network Level, The Host Level, The Application Level, Data Security and Storage, Aspects of Data Security, Data Security Mitigation Provider Data and Its Security, Identity and Access Management.

Auditing and Compliance in Cloud Environment: [2L]

Data Security in Cloud Computing Environment, Need for Auditing in Cloud Computing Environment, Third Party Service Provider, Cloud Auditing Outsourcing Lifecycle Phases, Auditing Classification.

Module 5: Concepts of Services and Applications [6L]

Service Oriented Architecture: Basic concepts of message-based transactions, Protocol stack for an SOA architecture, Event-driven SOA, Enterprise Service Bus, Service catalogs [6]

Applications in the Cloud: Concepts of cloud transactions, functionality mapping, Application attributes, Cloud service attributes, System abstraction and Cloud Bursting, Applications and Cloud APIs [2]

Cloud-based Storage: Cloud storage definition – Manned and Unmanned. [1]

Webmail Services: Cloud mail services including Google Gmail, Mail2Web, Windows Live Hotmail, Yahoo mail, concepts of Syndication services [1]

Textbooks:

Course Name: Quantum Computing

Course Code: CS-T-702

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Discrete Structures

Course Objective(s):

The objective of the course is to make the students able to –

- Understand the basic idea of quantum computing including background of mathematics and physics.
- Understand and explain the concept of quantum circuits using single and multiple qubit gates and also designing of quantum circuits.
- Compare between classical and quantum information theory and explain and apply Bell states, Quantum teleportation, Quantum Cryptography and no cloning theorem.
- Understand, explain and apply different quantum algorithms including classical computation on quantum computers like Deutsch's algorithm, Deutsch's-Jozsa algorithm, Shor factorization, Grover search and also relate between quantum and classical complexity classes.
- Understand noise and error correction including graph states and codes, quantum error correction, fault-tolerant.

Course Outcome(s):

After completion of the course students will be able to

CS-T-702.1: Understand the basic idea of quantum computing including background of mathematics and physics required for developing and solving complex engineering problem in the domain of quantum computing possibly using modern engineering tools.

CS-T-702.2: Understand and explain the concept of quantum circuits using single and multiple qubit gates and also designing of quantum circuits for solving engineering problem including societal and environmental issues.

CS-T-702.3: Compare between classical and quantum information theory and explain and apply Bell states, Quantum teleportation, Quantum Cryptography and no cloning theorem in solving engineering problem possibly in a team maintain proper ethics of professional collaboration.

CS-T-702.4: Understand, explain and apply different quantum algorithms including classical computation on quantum computers like Deutsch's algorithm, Deutsch's-Jozsa algorithm, Shor factorization, Grover search and also relate between quantum and classical complexity classes for solving engineering problem.

CS-T-702.5: Understand noise and error correction including graph states and codes, quantum error correction, fault-tolerant computation and apply it in designing and solving complex engineering problems leading to their lifelong learning.

Course Content:**Module 1: Introduction to Quantum Computation: 8L**

Quantum bits, Bloch sphere representation of a qubit, multiple qubits. Background Mathematics and Physics: Hilber space, Probabilities and measurements, entanglement, density operators and correlation, basics of quantum mechanics, Measurements in bases other than computational basis.

Module 2: Quantum Circuits: 6L

Single qubit gates, multiple qubit gates, design of quantum circuits.

Module 3: Quantum Information and Cryptography: 6L

Comparison between classical and quantum information theory. Bell states. Quantum teleportation. Quantum Cryptography, no cloning theorem.

Module 4: Quantum Algorithms: 8L

Classical computation on quantum computers. Relationship between quantum and classical complexity classes. Deutsch's algorithm, Deutsch's-Jozsa algorithm, Shor factorization, Grover search.

Module 5: Noise and error correction: 8L

Graph states and codes, Quantum error correction, fault-tolerant computation.

Name of the Paper: Mobile Computing**Paper Code: CS-S-702****Contact: =3L/Week****Credit Point: 3****No. of Lectures: 36****Prerequisite:**

1. Basic concept of computer network and communication engineering
2. Basic programming knowledge

Course Objective(s)

The objective of the course is to make the students able to –

- Understand and illustrate the basic concepts and principles in mobile computing
- Understand and demonstrate the various routing algorithms for both infrastructure based and ad hoc networks.
- Identify and develop mobility and bandwidth management in cellular network
- Design and build an energy efficient and secure mobile computing environment using heterogeneous wireless technologies
- Predict and explain the technical issues related to recent mobile computing environment

Course Outcome(s):

On completion of the course students will be able to

CS-S-702.1: Illustrate the concepts and working of modern communication technologies.

CS-S-702.2: Demonstrate the various routing algorithms for both infrastructure based and ad hoc networks.

CS-S-702.3: Develop mobility and bandwidth management in cellular network

CS-S-702.4: Design and build an energy efficient and secure mobile computing environment using heterogeneous wireless technologies

CS-S-702.5: Predict the technical issues related to recent mobile computing environment.

Course Content:

Module 1: Introduction [6L]:

Evolution of different types of wireless communication devices; Effects of mobility of devices; Cellular mobile networks – mobility management (call setup, handoff, interoperability and internetworking), bandwidth management, energy management, security; Brief introduction about different generations of wireless communication technology – 1G, 2G, 3G, 4G, 5G.

Module 2: Mobile Data Communication [5L]

Mobile Data Communication, WLANs (Wireless LANs) IEEE 802.11 standard, Bluetooth technology, Bluetooth Protocols, Ad hoc networks initialization, leader election, location identification, communication protocols, energy and security.

Module 3: Mobility Management in Cellular Networks [4L]

Call setup in PLMN (location update, paging), GPRS, Call setup in mobile IP networks; Handoff management; Mobility models- random walk, random waypoint, Brownian, map-based, group-based.

Module 4: Bandwidth Management in Cellular Mobile networks [3L]

Mathematical formulation of the channel assignment problem (CAP); CAP and generalized graph colouring; Benchmark instances; Lower bound on bandwidth, Genetic algorithms for channel assignment- concept of critical block in a hexagonal cellular network, coalesced CAP, fast near-minimal channel assignment algorithm.

Module 5: Localization of Nodes in a Mobile Network [4L]

Different approaches, Indoor and outdoor localizations, LOS and NLOS signals, Outdoor localization techniques – triangulation (TOA-based, AOA- based), errors due to inaccuracies in coordinates of beacon nodes and in measurements, selection of beacon nodes; Location region identification- computational geometric technique.

Module 6: Message Communication in Ad Hoc Networks [6L]

Collision avoidance mechanism (different schemes for a deterministic transmission schedule), collision resolution mechanism – successive partitioning approach; Time slot assignment based on location information, Point-to-point routing in ad hoc networks – proactive, reactive and hybrid approaches, different protocols - DSDV, DSR, AODV, TORA, ZRP

Module 7: Energy-efficient Communication [3L]

Energy efficiency at various layers - Physical layer, MAC layer, Network layer, Application layer, performance analysis in noisy channel environment.

Module 8: Secure Wireless Communication [4L]

Introduction-different types of attacks, internal attacks, external attacks; measures against attacks (authentication, intrusion detection, encryption); RC4 algorithm, Lightweight cryptographic algorithms; antijamming techniques.

Paper Name: Natural Language Processing

Paper Code: CS-D-702

Contact (Periods/Week): 3L/Week

Credit Point: 3

No. of Lectures: 35

Prerequisite:

1. Solid background in Linear algebra, Probability and Statistics, Artificial Intelligence and Neural Networks.
2. Good Exposure of Python packages.

Course Objective(s)

1. To explore Text Data using various industry standard tools.
2. To explore the Feature Engineering for Text Representation
3. To build the model for Clustering and Classifying Text
4. To implement Machine Learning and Deep Learning techniques.

Course Outcome(s)

On completion of the course, students will be able to

CS-D-702.1. Understand the basic concepts of text data using various industry standard tools.

CS-D-702.2. Understand the techniques to do the Feature Engineering for Text Representation.

CS-D-702.3. Understand the approaches to build models, Clustering and Classifying Text.

CS-D-702.4. Understand the different techniques in Machine learning and Deep Learning.

Module 1: Natural Language Processing Basics

8L

What is Natural Language Processing? Different Phases of Natural Language Processing; Linguistics: Language Syntax and Structure, Words, Phrases, Clauses, Grammar, Dependency Grammar, Constituency Grammar, Word-Order Typology; Lemmas and Word forms, Homonyms, Homographs and Homophones, Heteronyms and Heterographs, Polysemes, Capitonyms, Synonyms and Antonyms, Hyponyms and Hypernyms, Stemming and Lemmatization; Representation of Semantics; Text Corpora: Corpora Annotation and Utilities, Accessing Popular Corpora; Parts of Speech Tagging: Training and Building POS Taggers; HMM Part-of-Speech Tagging; NER-Tagging; Relationship Extraction, Temporal Information Extraction, Event Extraction, Template Filling; Conditional Random Fields (CRFs); Shallow Parsing, Chunking; Building Dependency and Constituency Parsers, Application of NLP.

Module 2: Feature Engineering for Text Representation

9L

Pre-processing the Text Corpus; N-gram Language Models, Smoothing; Traditional Feature Engineering Models; Extracting Features for New Documents; Topic Models in Gensim, LDA, LSI, Hierarchical Dirichlet process; Advanced Feature Engineering Models, Word Embedding, Word2Vec Model, The Continuous Bag of Words (CBOW) Model, The Skip-Gram Model; Semantic Analysis: Exploring WordNet, Understanding Synsets, Analyzing Lexical Semantic Relationships, Semantic Relationships and Similarity, Word Sense Disambiguation.

Module 3: Clustering and Classifying Text

9L

Clustering text: Text Similarity, Analyzing Term Similarity, Analyzing Document Similarity; Classifying text: Classification Models, Evaluating Classification Models, Building and Evaluating of the Text Classifier; Sentiment Analysis: Text Pre-processing and Normalization, Unsupervised Lexicon-Based Models, Classifying Sentiment with Supervised Learning, Text Summarization, Question & Answering

Module 4: Deep Learning Architectures for Sequence Processing

9L

Language Models Revisited; Getting words in order with convolutional neural networks (CNNs), Recurrent Neural Networks, Stacked and Bidirectional RNNs; LSTMs and GRUs; Attention, Transformers; Encoder-Decoder Model, Machine Translation; Beam Search; Text Classification using CNNs and LSTM; Chatbots

Course Name: Cryptography and Network Security**Course Code:** CS-A-702**Contact:** 3:0:0**Total Contact Hours:** 36**Credits:** 3**Prerequisites**

1. Knowledge of Computer Networks and Operating Systems fundamentals
2. Understanding of Discrete Mathematics concepts

Course Objective(s):

- To impart concepts on cryptography and Network security
- To gain knowledge of the standard algorithms used to provide confidentiality, integrity, and authenticity
- To recognize the various key distribution and management systems for security of a cryptosystem

Course Outcomes:

After completion of course, students would be able

CS-A-702.1: To understand the basic concepts in cryptography

CS-A-702.2: To apply the deployment of different encryption techniques to secure messages in transit across data networks

CS-A-702.3: To discuss various techniques used to assure Integrity and Authentication

CS-A-702.4: To analyze diverse security measures and issues in practice.

Course Contents

Module-1 [7L]

Introduction - Services, Mechanisms, and Attacks, OSI security architecture, Network security model [1L]

Classical Encryption techniques (Symmetric cipher model, substitution techniques, transposition techniques, steganography) [3L]

Finite Fields and Number Theory: Groups, Rings, Fields, Modular arithmetic, Euclid's algorithm [1L]

Polynomial Arithmetic, Prime numbers, Fermat's and Euler's theorem [1L]

Testing for primality - The Chinese remainder theorem - Discrete logarithms [1L]

Module-2 [9L]

Data Encryption Standard- Block cipher principles, block cipher modes of operation [2L]

Advanced Encryption Standard (AES), Triple DES, Blowfish, RC5 algorithm [3L]

Public key cryptography: Principles of public key cryptosystems, The RSA algorithm [2L]

Key management - Diffie Hellman Key exchange, Elliptic curve arithmetic, Elliptic curve cryptography [2L]

Module-3 [6L]

Authentication requirement, Authentication function, MAC, Hash function [2L]

Security of hash function and MAC, MD5, SHA, HMAC, CMAC [2L]

Digital signature and authentication protocols, DSS, ElGamal, Schnorr [2L]

Module-4 [7L]

Authentication applications, Kerberos, X.509 [1L]

Internet Firewalls for Trusted System: Roles of Firewalls, Firewall related terminology- Types of Firewalls, Firewall designs principles [1L]

SET for E-Commerce Transactions [1L]

Intruder, Intrusion detection system [1L]

Virus and related threats, Countermeasures [1L]

Trusted systems, Practical implementation of cryptography and security [2L]

Module-5 [7L]

E-mail Security: Security Services for E-mail-attacks possible through E-mail, Establishing keys privacy, authentication of the source [1L]

Message Integrity, Non-repudiation, Pretty Good Privacy, S/MIME [2L]

IP Security: Overview of IPSec, IPv4 and IPv6-Authentication Header, Encapsulation Security Payload (ESP) [1L]

Internet Key Exchange (Phases of IKE, ISAKMP/IKE Encoding) [1L]

Web Security: SSL/TLS Basic Protocol, computing the keys, client authentication [1L]

PKI as deployed by SSL Attacks fixed in v3, Exportability, Encoding, Secure Electronic

Transaction [1L]

Course Name: High Performance Computing

Course Code: CS-701A

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Computer Architecture Lab, Operating System Lab, Compiler design Lab

Course Objective(s):

The objective of the course is to make the students able to -

- Explain the basic knowledge of Parallel Processing.
- Understand the development and design of parallel system with Compute Unified Device Architecture (CUDA).
- Differentiate and analyze different Design Issues in Parallel Computing.
- Understand the limitation of Parallel Computing.
- Understand and distinguish different Power-Aware Computing and Communication system and also different elements of cloud computing services.

Course Outcome(s):

After completion of the course students will be able to

CS-701A .1 :Understand the basic knowledge of Parallel Processing and apply it in solving Complex Engineering Problem.

CS-701A .2 :Develop and design parallel system with Compute Unified Device Architecture (CUDA) for engineering problem leading to lifelong learning.

CS-701A .3 :Differentiate and analyze different Design Issues in Parallel Computing and apply the knowledge in solving Complex Engineering Problem including the problem in societal and environmental contexts.

CS-701A .4 :Understand the limitation of Parallel Computing and apply the knowledge to create and select appropriate techniques, resources, and modern engineering and IT tools to complex engineering problem.

CS-701A .5 :Understand and distinguish different Power-Aware Computing and Communication system and also different elements of cloud computing services leading to developing new computing system and analyzing of existing one.

Course Content:

Module-I: Parallel Processing Concepts (Quick Overview)[10L]

Levels of parallelism (instruction, transaction, task, thread, memory, function); Models (SIMD, MIMD, SIMT, SPMD, Dataflow Models, Demand-driven Computation etc); Architectures: N-wide superscalar architectures, multi-core, multi-threaded.

Module -2: Parallel Programming with CUDA (Compute Unified Device Architecture)[8L]

Processor Architecture, Interconnect, Communication, Memory Organization, and Programming Models in high performance computing architectures: (Examples: IBM CELL BE, Nvidia Tesla GPU, Intel Larrabee Microarchitecture and Intel Nehalem microarchitecture); Memory hierarchy and transaction specific memory design; Thread Organization.

Module -3: Fundamental Design Issues in Parallel Computing :[6L]

Synchronization; Scheduling; Job Allocation; Job Partitioning; Dependency Analysis; Mapping Parallel Algorithms onto Parallel Architectures; Performance Analysis of Parallel Algorithms.

Module -4: Fundamental Limitations Facing Parallel Computing [4L]

Bandwidth Limitations; Latency Limitations; Latency Hiding/Tolerating Techniques and their limitations

Module-5: Power-Aware Computing and Communication [6L]

Power-aware Processing Techniques; Power-aware Memory Design; Power-aware Interconnect Design; Software Power Management.

Module-6: Microservice Architecture- [2L]

Introduction to Docker, Kubernetes and Jenkins.

Textbook:

1. High Performance Cluster Computing, Volume 1, Architecture and Systems, Rajkumar Buyya, Pearson Education.
2. Berman, Fox and Hey, Grid Computing – Making the Global Infrastructure a Reality,

Wiley India.

3. Hurwitz, Bllor, Kaufman, Halper, Cloud Computing for Dummies, Wiley India.

Reference Books:

1. Ronald Krutz, Cloud Security, Wiley India.
2. Cloud Computing, A Practical Approach, Anthony Velte, Toby Velte, Robert Elsenpeter, McGrawHill.

Course Name: Image Processing

Course Code: CS-701B

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

1. Fourieranalysis
2. Linearalgebra
3. Probability

Course Objective(s):

- To learn discrete Fourier transform and its properties
- To study the monochrome and color imagefundamentals
- To learn the analytical tools and methods which are currently used in digital imageprocessing as applied to image information for humanviewing.
- To learn image compression and segmentationtechniques.

Course Outcomes:

After completion of course, students would be able

CS-701B.1: To acquire the knowledge of basic pre-processing techniques in monochrome and color images.

CS-701B.2: To develop skill in concepts of image enhancement like linear and non linear spatial filters using MATLAB.

CS-701B.3: To understand the concept and techniques of simple image processing projects using different methods of restoration.

CS-701B.4: To acquire the knowledge of the various segmentation algorithms for practical applications.

CS-701B.5: To analyze the performance of Lossless and Lossy compression techniques in images.

Course Contents:

Module -1: Introduction:[5L]

Digital Image Fundamentals : Overview, Computer imaging systems , Digital Image Representation, Fundamental steps in Image Processing [1L], Elements of Digital Image Processing - Image Acquisition, Storage, Processing, Communication, Display [1L]. Digital Image Formation: A Simple Image Model, Use and Analysis of Color Models in Image Processing [2L], Sampling & Quantization - Uniform & Non-uniform [1L].

Module -2: Mathematical Preliminaries : [5L]

Neighbour of pixels, Connectivity, Relations, Equivalence & Transitive Closure [1L]; Distance Measures, Arithmetic/Logic Operations, Discrete Signals and Systems [1L]- A Review – Fourier Transformation, Properties of The Two Dimensional Fourier Transform [2L], Discrete Fourier Transform, Discrete Cosine & Sine Transform [1L].

Module 3: Image Enhancement : [6L]

Spatial Domain: Gray level transformations – Histogram processing [2L] Basics of Spatial Filtering–Smoothing and Sharpening Spatial Filtering – Frequency Domain [2L]– Smoothing and Sharpening frequency domain filters – Ideal, Butterworth and Gaussian filters [2L].

Module -4: Image Restoration, Segmentation and Filtering :[14L]

Image Restoration and Segmentation:Image restoration: noise removal: mean & adaptive filters, degradation model, inverse filter [2L]. Discrete Formulation, Algebraic Approach to RestorationUnconstrained& Constrained [1L]; Constrained Least Square Restoration, Restoration by Homomorphic Filtering [1L], Geometric Transformation - Spatial Transformation, Gray Level Interpolation [1L]. Image Segmentation : Point Detection, Line Detection, Edge detection, Combined detection [2L],

Module -5: Edge Linking, Boundary Detection and Image compression : [5L]

Edge Linking & Boundary Detection- Local Processing, Global Processing via The Hough Transform [2L]; Thresholding - Foundation, Simple Global Thresholding, Optimal Thresholding[2L]; Region Oriented Segmentation - Basic Formulation, Region Growing by PixelAggregation, Region Splitting & Merging [2L], Image compression: system model, lossless methods, lossy methods [2L]

Module -6: Image Representation and Recognition :[5L]

Image Representation and Recognition :Boundary representation – Chain Code – Polygonal approximation [1L], signature, boundary segments – Boundary description [1L] – Shape number- Fourier Descriptor [1L], moments- Regional Descriptors –Topological feature [1L], Texture – Patterns and Pattern classes – Recognition based on matching [1L].

Course Name: OPTIMIZATION TECHNIQUES

Course Code: CS-701C

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisite:

Basic Knowledge of Function, plotting of Equation and inequations, Formulation of Mathematical Problem. Finding maximum and minimum from row or column or from Matrix.

Course Objective: Purpose of this course to develop models and then analyze the model using the techniques of Operations Research, Decision making under uncertainty and risk.

Course Outcomes(s):

On successful completion of the learning sessions of the course, the learner will be able to:

CS-701C .1: Recall the distinctive characteristics of different types of decision-making problem to formulate and solve a real-world problem a prototype of mathematical problem.

CS-701C .2: Understand the theoretical workings of appropriate decision making approaches and tools to identify the optimal strategy in competitive world.

CS-701C .3: Apply the principles of different Methods/Model of Operations Research to solve practical problems.

CS-701C .4: Analyze different engineering problems linked with Optimization Technique.

Course Content:**Module 1:**

Linear Programming Problem(LPP): Basics of Linear Programming Problem(LPP) and its Applications. General Mathematical Formulation of LPP; Definitions: Convex set, Solution, Feasible Solution, Basic and Non-Basic Variables, Basic Feasible Solution, Degenerate and Non-Degenerate solution, Optimum/Optimal Solution; Solution of LPP by Graphical Analysis/Method, Simplex Method, Charnes' Big M-Method; Duality Theory.

4L+3L+3L=10L

Module 2:

Transportation Problem, Assignment Problem.

6L

Module 3:

Game Theory: Introduction; Two person Zero Sum game, Saddle Point; Mini-Max and Maxi-Min Theorems (statement only) and problems; Games without Saddle Point; Graphical Method; Principle of Dominance. **5L**

Module 4:

Network Optimisation Models: CPM PERT (Arrow network), Time estimates, earliest expected time, latest allowable occurrence time, latest allowable occurrence time and slack. Critical path, Probability of meeting scheduled date of completion of project. Calculation of CPM network. Various floats for activities.

5L

Module 5:

Sequencing: Johnson's Algorithm (1957) For **n** Jobs and **two** machines, **n** Jobs and **three** machines. **2L**

Module 6:

Queuing Theory: Introduction and Basic Structure of Queuing Theory; Basic Definitions and Notations; Birth-and-Death Model (Poisson / Exponential distribution); Poisson Queue Models: (M/M/1):(∞/FIFO) and (M/M/1):(N/FIFO) and Problems. **5L**

Module 7:

Inventory Control: Determination of EOQ, Components, Deterministic Continuous & Deterministic Periodic Review Models, Stochastic Continuous & Stochastic Periodic Review Models. **3L**

Project Domain:

8. Study on Real life Problem Solve by Simplex Method.
9. Study on Real life Distribution Problem Solve by Transportation Problem.
10. Study on Real life Game / Marketing Problem Solve by Game Theory.
11. Study on Real life Network / Queueing Problem Solve by PERT/CPM and Queueing Theory.
12. Study on Real life Inventory Control Problem Solve by Inventory Control.

Text Books:

1. Operations Research by Kanti Swaroop and P.K. Man Mohan, Sultan Chand and Sons
2. Linear Programming and Theory of Games by Ghosh and Chakraborty, Central Book Agency
3. Linear Programming and Theory of Games by P.M.Karak, ABS Publishing House

4. Operations Research, D.K.Jana & T.K.Roy, Chhaya Prakashani Pvt. Ltd.
5. Operations Research, Kalavati, VIKAS
6. Operations Research, Humdy A Taha, PHI / Pearson

Reference Books:

1. Operations Research Theory and Applications by J.K.Sharma, Macmillan India Limited.
2. Operations Research, Vijayakumar, Scitech
3. Operations Research by S.D. Sharma, Kedar Nath Ram Nath Publishers.
4. Operations Research by A.P. Verma, S. K. Kataria & Sons.
5. Operations Research by P.K. Gupta & Hira, S.Chand
6. Operations Research by V.K. Kapoor

Course Name: Cyber Law and Ethics**Course Code: CS-702A****Contact: 3:0:0****Total Contact Hours: 36****Credits: 3****Prerequisite:**

1. Familiarity in computer Networking.
2. Basic concepts about network security.

Course Objective(s) :

- To understand, explore and acquire acritical understanding of Cyber Law.
- To learn the basics of a Cyber security
- To develop competencies for dealing with frauds and deceptions (Confidence Tricks, Scams)

Course Outcomes:

On completion of the course students will be able

CS-702A.1: To understand the Social and Intellectual Property Issues Emerging From Cyberspace.

CS-702A.2: To gather the knowledge of information technology act and legal Frame Work of Right to Privacy, Data Security and Data Protection.

CS-702A.3: To implement the relationship between commerce and cyberspace

CS-702A.4: To review the different network security threats and countermeasures.

CS-702A.5: To adapt the advanced security issues and technologies.

Course Contents:

Module – 1: Introduction of Cybercrime [5]

Cybercrime, Forgery, Hacking, Software Piracy, Computer Network intrusion
Criminals plan attacks, passive attack, Active attacks, cyber stalking.

Module – 2: Cybercrime Mobile & Wireless devices[8]

Security challenges in mobile devices, cryptographic security for mobile devices, Attacks on mobile/cell phones, Theft, Virus, Hacking. Bluetooth; Different viruses on laptop.

Module -3: Tools and Methods used in Cyber-crime[7]

Proxy servers, Password checking, Random checking, Trojan Horses and Backdoors; DOS & DDOS attacks; SQL injection: Buffer over flow Attacks, Scripts Kiddies and Packaged Defense.

Module – 4: Cybercrime & Cyber security[6]

Phishing methods, ID Theft; Online identity method Legal aspects, Indian laws, IT act, Public key certificate, Design of Cyber Security Policy of an Organization ,Unictral Model Law Jurisdiction to prescribe/Legislative Jurisdiction; Jurisdiction to adjudicate to enforce; Cyber Jurisdiction in Civil, Criminal & International Cases.

Module -5: Cyber Ethics[5]

The Importance of Cyber Law, Significance of cyber Ethics, Need for Cyber regulations and Ethics. Ethics in Information society, Introduction to Artificial Intelligence Ethics: Ethical Issues in AI and core Principles, Introduction to Block chain Ethics.

Text Books:

1. Cyber security by Nina Gobole&SunitBelapune; Pub: Wiley India.

French(Open Elective)

Pre-requisites: Basic high school level reading, writing and communication skills in English.**Course Outcome(s):**

By the end of the course the students will be able to

CS-702C .1: Read basic French and interpret the meaning

CS-702C .2: Construct simple sentences in French

CS-702C .3: Interact with others and hold simple conversations in French

CS-702C .4: Demonstrate a basic knowledge of French culture, manners, geography and world view

The proposed syllabus is as follows:

Module 1:[6L]**Vocabulaire**

- L' alphabet français (The Alphabets)
- Les nombres (cardinaux et ordinaux) (Numbers)
- Les mois de l'année (The Months of the Year)
- Les saisons (The Seasons)
- Les jours de la semaine (The Days of the Week)
- Les couleurs (The Colours)
- La famille (The Family)
- Les nationalités (The Nationalities)

Grammaire

- Les Verbes—être, avoir et aller
- Nouns—Gender and Number
- Les articles (définis, indéfinis, contracté et partitif)

- Les adjectifs—possessifs et démonstratifs

FrançaisInteractif (Listening and Speaking)

- Les salutations
- Les forms de politesse
- Présentez-vous (About Yourself)

Module2:[6L]

Vocabulaire

- L'heure (the time)
- La maison (the house)
- Le corps (the body)
- Les vêtements (clothes)
- Les professions (professions)
- Les loisirs (pastimes)
- Le sport (Sports)

Grammaire

- Le Verbes—*voir, savoir, venir, aller, sortir, connaître, partir.*
- Les négations
- Le futur
- Les interrogatifs

FrançaisInteractif (Listening and Speaking)

- Décrivez les images
- La dictée
- Lisez le journal

Module3 : [6L]

Vocabulaire

- La nourriture (Food)
- Les repas (Meals)
- Les légumes (Vegetables)
- Les fruits (Fruits)
- Les fleurs (Flowers)
- Les animaux (Animals)
- Les oiseaux (Birds)

Grammaire

- Les adverbes
- Les adjectifs
- Les prépositions

FrançaisInteractif (Listening and Speaking)

- Ecoutez la radio/la télévision

- Dialogues—À la médecin, au café, a la gare

Module4: [6L]

Vocabulaire

- Le jardin (The Garden)
- Le temps (the weather)
- Les voyages (Travel)
- La ville (the City)
- Les vacances (Holidays)

Grammaire

- Pronomsinterrogatifs
- Mood—subjonctif et l'impératif

FrançaisInteractif (Listening and Speaking)

- Se présenter (expressing ideas/opinions on general topics)
- Ecoutez le programme sur la radio/la télévision

Module5: [6L]

Vocabulaire

- Les modes de transport (Transport)
- L'Ecole (the School)
- À la Campagne (in the Country)
- À la restaurant (at the Restaurant)
- Le Cinema (at the Cinema)
- La Marché (at the Market)

Grammaire

- PasséComposé
- PasséRécent

EcrivezenFrançais (Writing)

- Decrivezvotreville
- Decrivezvotremaison/appartement
- Qu'est que son métier?

Module6:[6L]

En France

- Les villes de France (the Cities of France)
- Les montagnes et rivières de France (Mountains and Rivers)
- La géographie de France (Geography of France)
- La gastronomiefrançaise (French Food and Gastronomy)
- Le fêtes (Festivals of France)

Grammaire

- Les Verbes Pronominaux
- Les Pronoms Personnels

Ecrivez en Français (Writing)

- Décrivez votre vacation à l'mer
- Quels sont les loisirs préférés?
- Les magasins de supermarché

B. Practical

Course Name: Information Theory and Coding Lab

Course Code: CS-T-791

Contact: 0:0:3

Credits: 1.5

Prerequisites: Knowledge of C programming and MATLAB

Course Objective(s):

The objective of the course is to make the students able to

- Understand and use proper code in appropriate platform using suitable syntax for developing program to solve problems.
- Identify and use variables, constants, data type, operator, expression, statements, loops, vector, matrix, array, function, file handling to design the problem.
- Apply a top-down, modular, and systematic approach to construct the programs to solve the problem.
- Apply a variety of common numeric techniques to solve and analyse the problem.
- Interpret the result of the experiments, prepare laboratory reports based on observed output and analyse it.

Course Outcome(s):

After completion of the course students will be able to

CS-T-791.1 Understand and use proper code in appropriate platform using suitable syntax for developing program to solve problems related to Mathematics and Engineering field leading to lifelong learning.

CS-T-791.2 Identify and use variables, constants, data type, operator, expression, statements, loops, vector, matrix, array, function, file handling to design the problem using modern tools for solving complex engineering problems.

CS-T-791.3 Apply a top-down, modular, and systematic approach to construct the programs to solve the problem as a professional engineering practice.

CS-T-791.4 Apply a variety of common numeric techniques to solve and analyse engineering-related computational problems.

CS-T-791.5 Interpret the result of the experiments, prepare laboratory reports based on observed output and analyse it to validate professional ethics and responsibilities and norms of the engineering practice.

Course Content:

Module-1:

Revision on programming using C language. Familiarization with MATLAB environment setup, syntax, variables, commands, data types, operators, decisions, loops, vectors, matrix, arrays, functions, and advanced part, creating and editing basic MATLAB program in an editor, compilation and execution of MATLAB program.

Module-2:

Determination of various entropies and mutual information using C/MATLAB of the following channels

Noise free channel

Noisy channel

Module-3: Generation and evaluation of following variable source coding using C/MATLAB

Shannon – Fano coding

Huffman Coding and Decoding

Lempel Ziv Coding and Decoding

Module-4: Coding &Decoding of the following codes using C/MATLAB

Linear block codes

Cyclic codes

Convolutional codes

Module-5: Coding &Decoding of the following codes using C/MATLAB

BCH code

RS code

Module-6: Problem based on

Coded and uncoded communication system (Calculate the error probability) using C/MATLAB.

Source coding and channel coding for transmitting a text file using C/MATLAB.

Paper Name: Ad-Hoc and Sensor Networks Lab

Paper code: CS-S-791

Contact: 0:0:3

Credit Point: 1.5

List of Experiments:

- 1 Introduction of Wireless sensor network applications and its simulation
- 2 Network Simulator installation of wireless sensor network.
- 3 Implementation of routing protocol in NS2 for DSR protocol
- 4 Study other wireless sensor network simulators (Mannasim. Contiki)
- 5 Implementation of routing protocol in NS2 for AODV protocol for TORA protocol

Course Name: Data Mining and Data Warehousing Lab

Course Code: CS-D-791

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Data Structure & Programming, Design and Analysis of Algorithms, Database Management Systems, Statistics, Artificial Intelligence, Python Programming

Course Outcomes:

After completion of the course students will be able to

CS-D-7911: Understand and use the fundamental concepts of the evolving technologies in Data Mining and Data Warehousing through implementing them using proper techniques and tools to recognize their utilitarian importance in current technological context for further exploration leading towards lifelong learning.

CS-D-7912 : Identify and formulate an engineering problem by exploring contextual data and

its characteristics within the scope of Data Mining and Data Warehousing paradigm.

CS-D-7913 :Explore relevant literature and apply the concepts of Data Mining and Data Warehousing by implementing well-known algorithmic solutions using proper techniques and tools to solve contextual problems.

CS-D-7914 :Develop ideas and propose technical solutions to the challenging problems of Data Mining and Data Warehousing.

CS-D-7915 :Plan and Implement Data Mining based ideas as executable programs (preferably termed as models) by developing suitable algorithms with adequate documentation in collaborative environment for successfully carrying out projects on Data Mining and Data Warehousing and investigate their effectiveness by analyzing the performances using proper techniques and tools.

Course Content:

WEEK-1:

Introduction to Data Mining Programming Platform 3L

Introduction to Data Mining Programming Platform and Data Exploration: Data Types, Data Attributes, Statistical Description of Data, Data Visualization, Data Feature Vectors, Data Preprocessing: Data Cleaning, Data Transformation 3L

WEEK -2:

Affinity Analysis 3L

Implementation and Analysis of Recommending Engine 3L

WEEK -3: Association Analysis 3L

Implementation and Analysis of Apriori Algorithm 3L

WEEK -4: Regression 3L

Implementation and Analysis of Linear and Nonlinear Regression Methods 3L

WEEK -5: Classification 3L

Implementation and Analysis of k-Nearest-Neighbor Classifier, Decision Tree Classifier, Naïve Bayes Classifier 3L

WEEK -6: Classification 3L

Implementation and Analysis of ANN-Backpropagation and SVM Based Classifier

WEEK-7: Clustering 3L

Implementation and Analysis of k-Means and k-Medoids 3L

WEEK -8: Mining Time-Series Data 3L

Implementation and Analysis of Time-Series Data Mining Models 3L

WEEK -9: Discussion on Project Problems and Allocation (Problem Description Report Submission) 3L

WEEK -10: Designing Solution Model and Proposal Report Submission 3L

WEEK -11: Project Implementation, Verification and Documentation 3L

WEEK -12: Project Demonstration and Project Report Review 3L

Textbook:

1. Han J & Kamber M, "Data Mining: Concepts and Techniques", Morgan Kaufmann Publishers, Third Edition.
2. Pariteek Bhatia, "Data Mining and Data Warehousing: Principles and Practical Techniques", Cambridge University Press.

Reference Books:

1. Pang-Ning Tan, Vipin Kumar, Michael Steinbach, "Introduction to Data Mining", Pearson Education.
2. Robert Layton, "Learning Data Mining with Python", Packt Publishing

Paper Name: Cloud Computing Lab**Code: CS-A-791****Contacts: 0:0:3****Credits: 1.5****Prerequisite:**

1. Should have basic knowledge on C and JAVA programming.
2. Prior knowledge on Operating System

Course Objective (s):

- To develop web applications in cloud
- To learn the design and development process involved in creating a cloud based application
- To learn to implement and use parallel programming using Hadoop
- To learn how to work on CloudSim and TryStack applications.

Course Outcomes:

On completion of the course students will be able to

CS-A-791.1: Configure various virtualization tools such as Virtual Box, VMware workstation.

CS-A-791.2: Design and deploy a web application in a PaaS environment.

CS-A-791.3: Learn how to simulate a cloud environment to implement new schedulers.

CS-A-791.4: Install and use a generic cloud environment that can be used as a private cloud.

Experiments:

1. Installation of VMware Workstation on windows OS (version windows 7 to 10).
2. Installation of C compiler and execute simple programs of C using virtual machine.
3. Create a hello world application and other simple web applications using python/java in Google App Engine.
4. Launching of web applications using GAE launcher.
5. Creating a cloud environment using CloudSim and run a scheduling algorithm that is not present in CloudSim.
6. Transferring the files from one virtual machine to another virtual machine.
7. Find a procedure to launch virtual machine using trystack (Online Openstack Demo Version)
8. Install Hadoop single node cluster and run simple applications like wordcount.

Course Name: High Performance Computing Lab**Course Code: CS-791A****Contact: 0:0:3****Total Contact Hours: 36****Credits: 1.5****Prerequisites:** Computer Architecture Lab, Operating System Lab, Compiler design Lab**Course Objective(s):**

The objective of the course is to make the students able to -

- Understand, design and develop effective programs applying device Query, Vector Addition, different Matrix Multiplication, different Image processing algorithms using Xeon Phi Programming.
- Understand, design and develop effective programs applying device Query, Vector Addition, different Matrix Multiplication, different Image processing algorithms using Open MPI programming.
- Design and develop effective programs to solve problems like DAXPY, Matrix Multiply, Calculation of pi using work sharing and reduction, Producer consumer problem, Molecular dynamics simulation using Open MPI programming.
- Implement and analyze program to solve problems like DAXPY, Calculation of π - MPI Bcast and MPI Reduce, Ocean Kernel, and also for different Large Matrices using MPI programming.
- Prepare laboratory reports on interpretation of experimental results and analyze it for validating the same.

Course Outcome(s):

After completion of the course students will be able to

CS-791A .1 : Understand, design and develop effective programs for engineering and mathematical problems applying device Query, Vector Addition, different Matrix Multiplication, different Image processing algorithms using Xeon Phi Programming or modern programming tools leading to lifelong learning.

CS-791A .2 : Understand, design and develop effective programs for engineering and mathematical problems applying device Query, Vector Addition, different Matrix Multiplication, different Image processing algorithms using OpenMPI programming or modern programming tools leading to lifelong learning.

CS-791A .3 :Design and develop effective programs for engineering and mathematical problems like DAXPY, Matrix Multiply, Calculation of pi using work sharing and reduction, Producer consumer problem, Molecular dynamics simulation using Open MPI programming possibly as a team maintaining proper ethics of collaboration.

CS-791A .4 : Implement and analyze program for engineering and mathematical problems like DAXPY, Calculation of π - MPI Bcast and MPI Reduce, Ocean Kernel, and also for different Large Matrices using MPI programming leading to lifelong learning.

CS-791A .5: Prepare laboratory reports on interpretation of experimental results and analyze it for validating the same maintaining proper ethics of collaboration.

Course Content:

Device Query, Vector Addition, Matrix Multiplication, Tiled Matrix Multiplication, Picture Scaling, Image Blur, Image Grayscale. 1D, 2D, and 3D Stencil Operations. Histogramming, Convolution, Scan, Reduction using Xeon Phi Programming (3 Labs)

Vector Addition, Matrix Multiplication, Tiled Matrix Multiplication, Picture Scaling, Image Blur, Image Grayscale. 1D, 2D, and 3D Stencil Operations. Histogramming, Convolution, Scan, Reduction using OpenMPI programming (3 Labs)

DAXPY, Matrix Multiply, Calculation of pi using worksharing and reduction, Producer consumer problem, Molecular dynamics simulation problem using Open MPI programming (3 Labs)

DAXPY, Calculation of π - MPI Bcast and MPI Reduce, Ocean Kernel, Reduction example, Collective Communication - Scatter – Gather, MPI Derived Datatypes, Matrix Multiplication on a Cartesian Grid (2D Mesh) using Cannon's Algorithm, Matrix Multiplication using Cannon's Algorithm for Large Matrices using MPI programming. (3 Labs)

Textbook:

1. High Performance Cluster Computing, Volume 1, Architecture and Systems, Rajkumar Buyya, Pearson Education.
2. Berman, Fox and Hey, Grid Computing – Making the Global Infrastructure a Reality, Wiley India.
3. Hurwitz, Bllor, Kaufman, Halper, Cloud Computing for Dummies, Wiley India.

Reference Books:

1. Ronald Krutz, Cloud Security, Wiley India.
2. Cloud Computing, A Practical Approach, Anthony Velte, Toby Velte, Robert Elsenpeter, McGrawHill.

Course Name: Image Processing Lab**Course Code: CS-791B****Contact: 0:0:3****Credits: 1.5****Prerequisite:** Should have prior knowledge on syntaxes of programming like C++, JAVA.**Course Objective(s)**

- To learn discrete Fourier transform and its properties
- To study the monochrome and color image fundamentals
- To learn the analytical tools and methods which are currently used in digital image processing as applied to image information for human viewing.
- To learn image compression and segmentation techniques.

Course Outcomes:

On completion of the course students will be able to

CS-A-791.1: Acquire the fundamental concepts of a digital image processing system such as image acquisition, enhancement, segmentation, transforms, compression, morphology, representation and description.**CS-A-791.2:** Analyze images in the spatial domain.**CS-A-791.3:** Analyze images in the frequency domain through the Fourier transform.**CS-A-791.4:** Design and implement with MATLAB algorithms for digital image processing operations such as point processing, histogram processing,**CS-A-791.5:** Spatial and frequency domain filtering, denoising, transforms, compression, and morphological processing.**Experiments:**

1. W.A.P in MATLAB to extract different attributes of an Image.
2. W.A.P in MATLAB program for Image Negation.
3. W.A.P in MATLAB for Power Law Transformation.
4. W.A.P in MATLAB for Histogram Mapping and Equalization.
5. W.A.P in MATLAB for Image Smoothing and Sharpening.
6. W.A.P in MATLAB for Edge Detection using Sobel, Prewitt and Roberts Operators.
7. W.A.P in MATLAB for Morphological Operations on Binary Images.
8. W.A.P in MATLAB for Pseudo Colouring of images.

9. W.A.P in MATLAB for Chain Coding applied on images.
10. W.A.P in MATLAB for DCT/IDCT Computation.

Course Name: Optimization Techniques Lab

Course Code: CS-791C

Contact: 0:0:3

Credits: 1.5

Course Objective(s):

- To introduce the optimization techniques using both linear and non-linear programming.
- To focus on the convex optimization though some techniques will be covered for non-convex function optimization.
- To frame engineering minima maxima problems in the framework of optimization problems.

Course Outcome(s):

After the completion of the course, the students will be able to

CS-791C .1. Demonstrate the basic principles and concepts of Python

CS-791C .2. Explore the applicability of programming skills in Python.

CS-791C .3. Summarize various optimization techniques like LPP models.

CS-791C .4. Analyse the transportation, inventory and assignment problems.

CS-791C .5. Explain the concepts of sequencing, game theory and dynamic programming.

List Of Experiments (Includes but Not Limited to)

1. Matrix Operations
2. Minimum Cost Path
3. Finding Maximum Number in An Array
4. Array Sorting
5. Linear Programming Problem
6. Queuing Problem
7. Sequencing Problem
8. Game Theory
9. Assignment Problem
10. Dynamic Programming Problem
11. Inventory Problem

B. Mandatory Course

Course Name: Entrepreneurship & Innovation skill

Course Code: MC701

Contacts: 2L:0T:0P

Total Contact Hours: 24

Credit: 0

Prerequisite: None

Course Outcome(s):

After the completion of the course, the students will be able to:

MC701.1: Comprehend the role of bounded rationality, framing, causation and effectuation in entrepreneurial decision making.

MC701.2: Demonstrate an ability to design a business model canvas.

MC701.3: Evaluate the various sources of raising finance for startup ventures.

MC701.4: Explain the fundamentals of developing and presenting business pitching to potential investors.

Course Content

Module 1:[4L]

Introduction to Entrepreneurship: Entrepreneurs; entrepreneurial personality and intentions - characteristics, traits and behavioral; entrepreneurial challenges. Entrepreneurial Opportunities: Opportunities. discovery/ creation, Pattern identification and recognition for venture creation: prototype and exemplar model, reverse engineering.

Module 2: [4L]

Entrepreneurial Process and Decision Making: Entrepreneurial ecosystem, Ideation, development and exploitation of opportunities; Negotiation, decision making process and approaches, Effectuation and Causation; Advantage and Limitations of Entrepreneurship; Process of Entrepreneurship.

Module 3:[4L]

Crafting business models and Lean Start-ups: Introduction to business models; Creating value propositions-conventional industry logic, value innovation logic; customer focused innovation; building and analyzing business models; Business model canvas, Introduction to lean startups, Business Pitching.

Module 4: [4 L]

Organizing Business and Entrepreneurial Finance: Forms of business organizations; organizational structures; Evolution of Organisation, sources and selection of venture finance options and its managerial implications. Policy Initiatives and focus; role of institutions in promoting entrepreneurship.

Module 5: [4L]

Entrepreneurs as problem solvers: Innovations and Entrepreneurial Ventures – Global and Indian; Role of Technology – E-commerce and social media; Social Entrepreneurship – Concept; Entrepreneurship – The Indian Scenario

Module 6: [4 L]

Project/Case Study: (Any One)

1. Visit of the District Industries Centre and prepare a report of activities and programs undertaken by them
2. Conduct a case study of any entrepreneurial venture in your nearby area.
3. Field Visit: Visit any business firm near your locality; interact with the owner of the business firm and prepare a field report on parameters like: type of business, scale of business, product/service dealing in, target customer, problems faced and measures to solve the faced challenges.
4. Know your State Handicraft and Handlooms as a means of economic activity

Syllabus of 8th Semester

A. Theory

Course Name: Advance Graph Algorithms

Course Code: CS-T-801

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Discrete Mathematics, Graph Theory

Course Outcome(s):

CS-T-801.1: To understand the basic concept of Graph theory and Graph Algorithm and apply them in designing solution to Computer Science and engineering domain problem.

CS-T-801.2: To demonstrate the basic concept of graph implementation programming and use of data structure to represent graph for developing the solution to the graph based problems in computer science domain

CS-T-801.3: To formulate graph algorithms and programs in solving Computer science and engineering problem leading to lifelong learning and Analyze the efficiency of algorithms using time and space complexity.

CS-T-801.4: To apply the graph theory principles and concepts to design an efficient algorithm and use suitable data structure for problem solving.

CS-T-801.5: To develop better algorithm in compare to some existing algorithm and create new efficient data structures for solving many graph based real life problem in Computer science domain.

Course Content:

Module- 1:[6L]

Fundamental concept of Graph :Definition of Graphs, Representations of graphs, degree sequences, distance in graphs, complete, regular and bipartite graphs, basic properties of Paths, Cycles, and Trails, Connection, Bipartite Graphs, Eulerian Circuits, Vertex Degrees and Counting, Degree-sum formula.

Module- 2:[5L]

Graph traversal algorithm-Introduction to Graphs & its Applications:Breadth-first search and tree, Depth-first search and tree , Topological sort, Strongly connected components

Module-3:[5L]

Trees and connectivity –Properties of trees, vertex and edge,connectivity, Mengers theorem, Minimum Spanning Trees, Growing a minimum spanning tree, The algorithms of Kruskal and Prim

Module-4: [5L]

Shortest Paths problem: Single-source shortest paths in directed acyclic graphs, Dijkstra's algorithm, The Bellman-Ford algorithm, All-Pairs Shortest Paths, The Floyd-Warshall algorithm

Module -5: [7L]

Flow networks problem: The Ford-Fulkerson method, Maximum bipartite matching, Cuts and Connectivity, k-Connected Graphs, Max-Flow Min-cut Theorem, Menger's Proof using Max-Flow Min-Cut Theorem.

Module-6: [4L]

Planar Graphs, Characterization of Planar Graphs, Kuratowski's Theorem, Wagner's Theorem, Graph-coloring, Hamiltonian Graph, Traveling Salesman Problem

Module- 7: [4L]

Matchings and Covers: Hall's Condition, Min-Max Theorem, Independent Sets, Covers and Maximum Bipartite Matching, Augmenting Path Algorithm, Weighted Bipartite Matching, Hungarian Algorithm, Stable Matchings and Faster Bipartite Matching, Factors & Perfect Matching in General

Course Name: Real Time Systems

Course Code: CS-S-801

Total Contact Hours:36

Credit:3

Prerequisites:

1. Concepts of Operating systems and Algorithm.
2. Knowledge of Distributed System basics.

Course Objective(s):

- To understand the real-time systems
- Obtain a broad understanding of the technologies and applications for emerging and exciting domain of real-time systems.
- Get in-depth hands-on experience in designing and developing a real time systems.

Course Outcome(s):

CS-S-801.1: Understand the concepts of Real-Time systems

CS-S-801.2: Recognize the characteristics of a real-time system

CS-S-801.3: Understand and develop document on an architectural design of a real-time system.

CS-S-801.4: Develop and document Task scheduling, resource management, real-time operating systems and fault tolerance applications of real-time systems.

Course Contents:**Module-1: Introduction [8L]**

Definition, Typical Real Time Applications: Digital control, High Level Controls, Signal processing etc. , Release Times, Deadline period and time constraints, Hard and soft real time systems, Reference models for RTOS: Processors and Resources, Temporal parameters of Real-time workload, Periodic Task Model, Precedence Constraints and Data Dependency.

Module-2: Real Time Scheduling. [8L]

Common Approaches to Real Time Scheduling: Clock Driven Approach, Weighted Round Robin Approach, Priority Driven Approach, Dynamic Versus Static Systems, Optimality of Effective-Deadline-First (EDF) and Least-Stack-Time-First (LST) algorithms, Rate Monotonic algorithm, Offline versus Online Scheduling.

Module-3: Resources Sharing. [8L]

Effect of Resource Contention and Resource Access Control (RAC), Non-pre-emptive Critical Sections, Basic Priority- Inheritance and Priority-Ceiling Protocols, Stack based Priority Ceiling Protocol, Use of Priority Ceiling Protocol in Dynamic priority systems, Pre-emption Ceiling Protocol, Access control in Multiple Module Resources, Controlling Concurrent Accesses to Data Objects.

Module-4: Real Time Communication. [6L]

Basic Concepts of Real time Communication, Soft and Hard real-time Communication systems, Model of Real-time Communication, Priority based service and Weighted Round

Robin Service disciplines for switched Networks, Medium Access control protocols for broadcast networks, Internet and resource reservation protocols

Module-5: Real Time Operating Systems and Databases. [6L]

Features of RTOS, Time Services, UNIX as RTOS, POSIX Issues, Characteristic of temporal data, temporal consistency, on-currency Control, and Overview of Commercial Real Time databases.

Text Books

1. Real Time Systems – Jane W. S. Liu, Pearson Education Publication

Reference Books

1. Real Time Systems – Mall Rajiv, Pearson Education
2. Real-Time Systems: Scheduling, Analysis, and Verification – Albert M. K. Cheng, Wiley.

Course Name: Big Data Analytics

Course Code: CS-D-801

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites: Data Structure, Design and Analysis of Algorithms, Database Management Systems, Statistics, Artificial Intelligence, Programming skills of Python.

Course Objective(s):

1. Comprehend the fundamental concepts of the Big Data Analytics exploring machine learning strategies such as Supervised and Unsupervised Learning etc. for analyzing various types of large scale structured as well as unstructured data distributed across multiple locations (Map Reduce, Hadoop and NoSQL Framework).
2. Formulate an engineering problem of analyzing large scale data distributed across multiple locations to make automated meaningful decisions
3. Apply the concepts of Big Data Analytics to solve problems of making automated decisions dealing with large scale structured as well as unstructured data distributed across multiple locations.
4. Excogitate and Implement ideas to address the challenging issues of Big Data Analytics.
5. Analyze the effectiveness of various Big Data Analytics Frameworks.

Course Outcome(s):

After completion of the course students will be able to

CS-D-801.1 :Understand and explain the fundamental concepts of the BigData Analytics which are primarily explored for making automated decisions using machine learning strategies

on analyzing large scale structured as well as unstructured data distributed across multiple locations (Map Reduce, Hadoop and NoSQL Framework) underscoring the utilitarian importance in current technological context for further exploration leading towards lifelong learning.

CS-D-801.2 : Identify and formulate an engineering problem of analyzing large scale data distributed across multiple locations to make automated meaningful decisions within the scope of Big Data Analytics Frameworks.

CS-D-801.3 : Explore relevant literature and apply the concepts of Big Data Analytics to solve problems of making automated decisions dealing with large scale structured as well as unstructured data using Map Reduce, Hadoop and advanced SQL Frameworks.

CS-D-801.4 : Examine ideas for proposing solutions to the challenging problems of Big Data Analytics.

CS-D-801.5 : Implement ideas of Big Data Analytics through developing feasible algorithms or frameworks and investigate their effectiveness in solving the relevant problems by analyzing the performances using proper techniques.

Course Content:

Module – 1: Introduction to Basic Analytics [10L]

Introduction: Big data overview, Analyst's perspective on data repositories, Current analytical architecture, Drivers of big data, Examples of big data analytics.

Life Cycle of Data Analytics: Phase 1: Discovery, Phase 2: Data preparation, Phase 3: Model planning, Phase 4: Model building, Phase 5: Communication of results, Phase 6: Making operational.

Basic Analytic Methods: Visualization, Dirty data, Data exploration versus presentation, Statistical methods for evaluation – hypothesis testing, difference of means, rank sum test, type I and type II errors, ANOVA.

Module - 2: Advanced Analytic Methods I [8L]

Clustering: Overview, K-means, Determining the number of clusters, Diagnostics.

Association Rules: Overview, Apriori algorithm, Evaluation of candidate rules, Application of association rules, Validation and testing, Diagnostics.

Regression: Linear regression - model description, Logistic regression – model description, Other regression models.

Classification: Decision trees – overview, General algorithm, Decision tree algorithms, Evaluating a decision tree, Naïve Bayes – Bayes theorem, Naïve Bayes classifier, Diagnostics of classifiers.

Module – 3: Advanced Analytic Methods II [8L]

Time Series Analysis: Overview, Box-Jenkins methodology, Autocorrelation function (ACF), Autoregressive model, Moving average model, ARMA and ARIMA model, Building and evaluating an ARIMA model.

Text Analysis: Steps in text analysis, Collecting raw text, Representing text, Term Frequency-Inverse Document Frequency (TFIDF), Categorizing documents by types, Determining sentiments.

Map Reduce and Hadoop: Analytics for unstructured data – map reduce, Apache Hadoop, Hadoop Ecosystem – Pig, Hive, Hbase, Mahout.

Module – 4: Advanced Analytic Methods III [10L]

Technology and Tools: SQL essentials - Join, Set, Grouping extensions, Advanced SQL – Window functions, User-defined functions, Ordered aggregates, MADlib, NoSQL.

Integration of Techniques: Communicating and operationalizing an analytic project.

Creating final deliverables – Developing core materials, project goals, Main findings, Approach, Model description and model details, Recommendations, Providing technical specifications and code.

Data visualization basics - Key points, evolution of a graph, common representation methods, how to clean up a graphic.

Course Name: Computer Graphics

Course Code: CS-A-801

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

Mathematics, Computer Fundamentals & Principle of Computer Programming

Course Outcomes

On successful completion of the learning sessions of the course, the learner will be able

CS-A-801.1: To remember the foundations of computer graphics and different display technology and devices.

CS-A-801.2: To analyze the concept of geometric, mathematical and algorithmic approach necessary for programming computer graphics.

CS-A-801.3: To explain clipping with the comprehension of windows, view-ports in relation to images display on screen.

CS-A-801.4: To experiment and compare different hidden surface illumination methods

Course Content:

Module – 1: [4L] Introduction: Objective, applications, GKS/PHIGS, normalized co-ordinate system, aspect ratio.

Module -2:[4L] Graphics System: Vector and raster graphics, various graphics display devices, graphics interactive devices, segmented graphics, attribute table.

Module -3 :[4L] Raster Scan Graphics: Line drawing algorithms, circle/ellipse drawing algorithms, polygon filling algorithms.

Module -4 :[4L] Geometric Transformation: Homogeneous co-ordinate system, 2D and 3D transformations, projection— orthographic and perspective.

Module – 5 :[4L] Curves and Surfaces: Curve approximation and interpolation, Lagrange, Hermite, Bezier and BSpline curves/surfaces and their properties, curves and surface drawing algorithms.

Module – 6 :[4L] Geometric modelling: 3D object representation and its criteria, edge/vertex list, constructive solid geometry, wire-frame model, generalized cylinder, finite element methods.

Module – 7 :[4L] Clipping :Window and viewport, 2D and 3D clipping algorithms.

Module –8:[4L] Hidden Lines and Hidden Surfaces:Concept of object- and image-space methods, lines and surface removal algorithms.

Module – 9 :[4L] Intensify, Coloring and Rendering:RGB, YIQ, HLS and HSV models and their conversions, gamma correction, halftoning. Illumination models, polygon mesh shading, transparency, shadow, texture.

Paper Name: Human Resource Development and Organizational Behaviour**Paper Code: CS-801A****Credits: 3****No. of lectures: 36****Course Objective(s):**

- To develop an understanding of the nature, functioning and design of organisation as social collectivises.
- The basic concepts and theories underlying individual behaviour besides developing better insights into one's own self.
- To gain insight into the organisational learning processes, how they can be fostered and enhanced.
- Individual behaviour in groups, dynamics of groups and team building besides developing a better awareness of how they can be better facilitators for building effective teams as leaders themselves.

Course Outcomes

At the end of the course students are able

CS-801A.1:To understand key functions in management as applied in practice.

CS-801A.2:To identify and analyse major practices associated with HRD in modern work and organisations;

CS-801A.3:To evaluate the connections between the HRD process and the contemporary performance management concerns of organisations

CS-801A.4:To analyse the behaviour of individuals and groups in organisations in terms of the key factors that influence organisational behaviour.

CS-801A.5:To assess the potential effects of organisational-level factors (such as structure, culture and change) on organisational behaviour.

CS-801A.6:To evaluate the potential effects of important developments in the external environment (such as globalisation and advances in technology) on organisational behaviour

Course Contents

Module – 1 HRD-Macro Perspective: HRD Concept, Origin and Need, HRD as a Total System; Approaches to HRD; Human Development and HRD; HRD at Macro and Micro Climate. **3L**

Module -2 HRD–Micro Perspective: Areas of HRD; HRD Interventions Performance Appraisal, Potential Appraisal, Feedback and Performance Coaching, Training, Career Planning, OD or Systems Development, Rewards, Employee Welfare and Quality of Work Life and Human Resource Information; Staffing for HRD: Roles of HR Developer; Physical and Financial Resources for HRD; HR Accounting; HRD Audit, Strategic HRD **6L**

Module – 3 Instructional Technology for HRD: Learning and HRD; Models and Curriculum; Principles of Learning; Group and Individual Learning; Transactional Analysis; Assessment Centre; Behaviour Modeling and Self Directed Learning; Evaluating the HRD.**5L**

Module – 4 Human Resource Training and Development: Concept and Importance; Assessing Training Needs; Designing and Evaluating T&D Programmes; Role, Responsibilities and challenges to Training Managers.**4L**

Module – 5 Organisational Effectiveness (OE): Concept; Approaches to O E; Adoptive Coping Cycle for Effectiveness; Achieving OE; Organisational Climate: Concept, Determinants of Organisational Climate.**3L**

Module-6 Organization Theory: Classical Theory; Neo-Classical Theory, Modern Behavioural Theories, contingency theory, system theory, modern structural models; Organizational Culture; Creating and Sustaining Culture; Work Culture.**6L**

Module –7 Motivation: Types of Motives; Theories of Maslow; Herzberg, McGregor, Alderfers, Porter and Lawler’s Model; Job Enlargement, Job Enrichment, Behaviour Modification. **3L**

Module– 8(a) Group & Group Dynamics - concept, importance, classification of groups, reason for group, formation, group cohesiveness. (b) Team work: meaning, concept, types, creating, and an effective team. (c) Leadership: Concept, Leader vs. Manager; Classical Studies on Leadership; Trait Theories; Behavioral Theories; Group and Exchange Theories; Contingency Theory of Leadership; Leadership Styles.**6L**

Course Name: VLSI
Course Code: CS-801B
Contacts: 3:0:0
Credits: 3
Total Contact Hours: 36

Prerequisite: Concept of courses Solid State Devices; Analog Electronic Circuit; Digital Electronic and Circuit

Course Objective(s):

Objective of the course is:

To understand the basic concepts of designing combinational and sequential circuits and the design of VLSI ICs

To motivate students to design VLSI circuits in the area of digital, analog

To encourage for the design of IC with low power and high speed.

To study various programmable logic devices like PLDs and FPGA.

Course Outcome(e):

The students will be able to

CS-801B .1: Understand scale of integration and VLSI design flow and VLSI Design steps.

CS-801B .2: Calculate and analyze the different parameters related to the different MOS devices and to design the combinational and sequential logic circuits.

CS-801B .3: Describe fabrication steps of IC and construct stick diagram & layout of CMOS inverter and basic gates based on Layout design rules.

CS-801B .4: Understand the VHDL basics and to construct the combinational and sequential logic circuits.

Module –1: Introduction to VLSI Design:

[9L]

Historical perspective development of VLSI from discrete electronic circuit to VLSI IC, MSI, LSI, Microelectronics & VLSI.

Types of VLSI Chips (General purpose, ASIC, PLA, FPGA), photo-resist Basic CMOS Technology – (Steps in fabricating CMOS), Basic n-well CMOS process VLSI Design Concepts, Moore's Law, Scale of Integration (SSI, MSI, LSI, VLSI, ULSI – basic idea only), Types of VLSI Chips (Analog & Digital VLSI chips, General purpose, ASIC, PLA, FPGA), Design principles (Digital VLSI – Concept of Regularity, Granularity etc), Design Domains (Behavioural, Structural, Physical), Y-Chart, Digital VLSI Design Steps.

Module-2: MOS structure:

[2L]

E-MOS & D-MOS, Charge inversion in E-MOS, Threshold voltage, Flat band voltage, Potential balance & Charge balance, Inversion, MOS capacitances. Three Terminal MOS Structure: Body effect. Four Terminal MOS Transistor: Drain current, I-V characteristics. Current-voltage equations (simple derivation). Scaling in MOSFET, General scaling, Constant Voltage & Field scaling.] CMOS: CMOS inverter, Simple Combinational Gates - NAND gate and NOR Gate using CMOS.

Module-3: Micro-electronic Processes for VLSI Fabrication:

[10L]

Silicon Semiconductor Technology- An Overview, Wafer processing, Oxidation, Epitaxial deposition, Ion-implantation & Diffusion, Cleaning, Etching, Photo-lithography – Positive & Negative ess, p-well CMOS process, Twin tub process, Silicon on insulator Layout Design Rule: Stick diagram with examples, Layout rules.

Module –4: Hardware Description Language:[6L]

VHDL or Verilog Combinational & Sequential Logic circuit Design.

Text Books:

1. Digital Integrated Circuit , J.M.Rabaey, Chandrakasan, Nicolic, Pearson Education
2. CMOS Digital Integrated Circuits Analysis and Design , S.M.Kang&Y.Leblicic,TMH.

Reference Books:

Course Name: Simulation and Modelling

Course Code: CS-801C

Contact: 3:0:0

Total Contact Hours: 36

Credits: 3

Prerequisites:

Programming and Data Structures
 Discrete Mathematics and Probability theory
 Game theory
 Numerical Analysis

Course Objective(s):

To understand the Models and Simulation of Continuous and Discrete Systems.
 To enable students to analyze Continuous Uniformly Distributed Random Numbers
 To assess the strengths and weaknesses of various methods and to analyze their behavior.

Course Outcome(s):

On completion of the course students will be able to

CS-801C .1: Student will be able to summarize the issues in Modeling and Simulation and to explain the System Dynamics & Probability concepts in Simulation.

CS-801C .2: Student will be able to solve the Simulation of Queuing Systems

CS-801C .3: Student will be able to analyze the Simulation output.

CS-801C .4: Student will be able to identify the application area of Modeling and Simulation, and apply them.

CS-801C .5: Student will be able to implement new model by applying their knowledge

Course Contents:**Module-1: Introduction to Modeling and Simulation [7L]**

Nature of Simulation. Systems, Models and Simulation, Continuous and Discrete Systems, system modeling, Components of a simulation study, Introduction to Static and Dynamic System simulation, Application areas, Advantages, Disadvantages, and pitfalls of Simulation.

Module –2: System Dynamics & Probability concepts in Simulation [10L]

Exponential growth and decay models, Generalization of growth models, Discrete and Continuous probability functions, Continuous Uniformly Distributed Random Numbers, Generation of a Random numbers, Generating Discrete distributions, Non-Uniform Continuously Distributed Random Numbers, Rejection Method.

Module-3: Simulation of Queuing Systems and Discrete System Simulation [14L]

Poisson arrival patterns, Exponential distribution, Service times, Normal Distribution Queuing Disciplines, Simulation of single and two server queues. Application of queuing theory in computer system. Discrete Events, Generation of arrival patterns, Simulation programming tasks

Gathering statistics, measuring occupancy and Utilization, Recording Distributions and Transit times.

Module-4: Analysis of Simulation output [5L]

Sensitivity Analysis, Validation of Model Results

Text Books:

Course Name: Values and Ethics in Profession

Course Code: CS-802A

Contact: 3L:0T: 0P

Credit: 3

No. of Lectures: 34

Prerequisites: Basic knowledge of engineering and management.

Course Outcomes

On completion of the course students will be able to

CS-802A.1: Understand the core values that shape the ethical behavior of an engineer and Exposed awareness on professional ethics and human values.

CS-802A.2: Understand the basic perception of profession, professional ethics, various moral issues & uses of ethical theories

CS-802A.3: Understand various social issues, industrial standards, code of ethics and role of professional ethics in engineering field

CS-802A.4: Aware of responsibilities of an engineer for safety and risk benefit analysis, professional rights and responsibilities of an engineer.

CS-802A.5: Acquire knowledge about various roles of engineers in variety of global issues and able to apply ethical principles to resolve situations that arise in their professional lives

Course Content:

Module: 1: Introduction

6L

Basic Concepts, Governing Ethics, Personal & Professional Ethics, Ethical Dilemmas, Life Skills, Emotional Intelligence, Thoughts of Ethics, Value Education, Dimensions of Ethics, Profession and professionalism, Professional Associations, Professional Risks, Professional Accountabilities, Professional Success, Ethics and Profession.

Module 2: Theories of Self Development

6L

Emotional Intelligence (EI): Concept, Johari Window, Importance and Measurement, Concept of Motivation, Maslow's theory, Kohlberg's theory, Gilligan's theory – towards a comprehensive approach to moral behaviour – truth – approach to knowledge in technology.

Module 3: Moral and Ethical Concerns

4L

Variety of Moral Issues, Moral Dilemmas, Nature of values, Value Crisis in contemporary society, Value Spectrum of a good life, Steven Covey's Pursuit of Excellence.

Module 4: Professional Practices in Engineering

8L

Professions and Norms of Professional Conduct, Norms of Professional Conduct vs. Profession; Responsibilities, Obligations and Moral Values in Professional Ethics, Professional codes of ethics, the limits of predictability and responsibilities of the engineering profession, Ethical and Unethical practices – case studies, Whistle blowing and beyond and Case studies.

Module 5: Global issues in Professional Ethics

10L

Introduction – Current Scenario, Technology Globalization of MNCs, International Trade, World Summits, Issues, Business Ethics and Corporate Governance, Sustainable Development Ecosystem, Energy Concerns, Ozone Deflection, Pollution, Ethics in Manufacturing and Marketing, Media Ethics; Bio Ethics, Intellectual Property Rights.

Course Name: History of Science and Technology in India

Course Code: CS-802B

Contact: 3L:0T:0P

Total Contact Hours: 36

Credit: 3

Course Objective(s):

To learn distinguished characteristics of science and technology, to understand the evolution of science and technology and historical context.

Course Outcome(s):

CO1: To understand the development of science and technology in ancient India.

CO2: To understand that development is not solo pursuit rather an interactive and collective process.

CO3: To familiarize with the evolution of scientific ideas and technical solution and their linkages with the socio-culture necessities.

CO4: To analyse the socio-cultural and philosophical context in which the various scientific and technological ideas got developed in India. and thereby help in repositioning India's contributions in science and technology.

Module 1: Historical Perspective [5L]

The nature of science and technology, Roots of science and technology in India, Science and society, Scientists and society, Science and Faith and the rise of applied sciences.

Module 2: Policies and Plans after Independence [7L]

Nehru's vision of science for independent India, Science and technology developments in the new era science and technology developments during the Five Year Plan Periods and science and technology policy resolutions.

Module 3: Research and Development (R&D) in India [7L]

Expenditure in R&D, Science and Technology Education, Research activities and promotion of technology development, Technology mission, Programs aimed at technological self-reliance, activities of council of scientific and industrial research (CSIR).

Module 4: Science and Technological Developments in Major Areas [11L]

Space – Objectives of space programs, Geostationary Satellite Services – INSAT system and INSAT services remote sensing applications, Launch Vehicle Technology

Ocean Development – Objectives of ocean development, Biological and mineral resources, Marine research and capacity building

Defence Research – Spin-off technologies for civilian use,

Biotechnology – Applications of biotechnology in medicine, Biocatalysts, Agriculture, Food, Fuel and Fodder, Development of biosensors and animal husbandry

Energy – Research and development in conservation of energy, India's nuclear energy program, technology spin-offs.

Module 5: Nexus between Technology Transfer and Development [6L]

Transfer of Technology – Types, Methods, Mechanisms, Process, Channels and Techniques, Appropriate technology, Technology assessment, Technological forecasting, Technological

innovations, and barriers of technological change.

Course Name: Economic Policies in India

Course Code: CS-802C

Contact: 3L:0T:0P

Total Contact Hours: 36

Credit: 3

Course Objective(s):

This course reviews major trends in Indian Economic Policies towards the attainment of economic and social development in the post-independence period.

Course Outcome(s):

CS-802C.1: To understand the basic characteristics of Indian economy, its potential

CS-802C.2: To understand the importance, causes and impact of population growth and its distribution, translate and relate them with economic development.

CS-802C.3: To understand the importance of planning undertaken by the government of India, have knowledge on the various objectives, failures, and achievements as the foundation of the ongoing planning and economic reforms taken by the government

CS-802C.4: To analyse the progress and changing nature of different sectors and their contribution to the economy.

CS-802C.5: To analyse the developmental trends of Indian economy.

Course Content

Module 1: Introduction: [4L]

Indian Economy on the eve of Independence, British rule and its impact on Indian Economy, Emergence, and development of Planning exercise in India – historical debates, plan models and shift in focus over time

Module 2: Issues in Growth, Development and Sustainability[4L]

Output (National Income) and Employment Structure of Indian Economy; Composition and relative rates of growth of agriculture, industry, and services sectors; Sub-sectoral analysis.

Module 3: Factors in development: Capital formation (physical and human) [12L]

Trends and patterns in structure of population over time – growth rate, gender, rural-urban, literacy, regional; Structure and trends of Poverty and Inequality (interpersonal and regional); Inflation – trends, structure and causes; Unemployment – trends, structure, and types.

Module 4: Trends in Agricultural Production and Productivity [6L]

Firm size and productivity, Land Reforms – Genesis, Progress and status, new agricultural strategies.

Module 5: Trends and Patterns of Industrial Sector[6L]

Changes in the structure of Indian Industry; Small Scale Industries – Growth, Structure, and its contribution in national economy; Public Sector – Growth, Structure, Historical role, Evolution and Dilution.

Module-6: Trends in Exports and Imports[4L]

Composition and Direction of Foreign Trade; Balance of Payments – Current Status

C.Mandatory Course

Course Name: Essence of Indian Knowledge Tradition

Course Code: MC 801

Contact: 3L:0T:0P

Total Contact Hours: 36

Course Objective(s):

To understand and analyse the importance of the Indian traditional knowledge and proper applications of these in our day-to-day life

To simplify the concepts of Indian knowledge tradition and to make them understand the Importance of roots of knowledge system.

Course Outcome(s):

At the end of the Course, Student will be able to:

MC 801.1: Identify the concept of Traditional knowledge and its importance.

MC 801.2: Explain the need and importance of protecting traditional knowledge.

MC8013.3: Interpret the concepts of Intellectual property to protect the traditional knowledge.

MC 801.4: Illustrate the various enactments related to the protection of traditional knowledge.

MC 801.5: Explain the importance of Traditional knowledge in Agriculture and Medicine.

Course Content:**Module 1: [7L]**

Introduction to traditional knowledge: Define traditional knowledge, nature and characteristics, scope and importance, kinds of traditional knowledge, Indigenous Knowledge (IK), characteristics, traditional knowledge vis-a-vis indigenous knowledge, traditional knowledge Vs western knowledge traditional knowledge.

Module 2: [8L]

Protection of traditional knowledge: The need for protecting traditional knowledge Significance of traditional knowledge Protection, value of TK in global economy, Role of Government to harness traditional knowledge.

Module 3: [6L]

Legal framework and TK: The Scheduled Tribes and Other Traditional Forest Dwellers (Recognition of Forest Rights) Act, 2006, Plant Varieties Protection and Farmer's Rights Act, 2001 (PPVFR Act); The Biological Diversity Act 2002 and Rules 2004, the protection of traditional knowledge bill, 2016.

Module 4: [7L]

Traditional knowledge and intellectual property: Systems of traditional knowledge protection, Legal concepts for the protection of traditional knowledge, Patents and traditional knowledge, Strategies to increase protection of traditional knowledge.

Module 5: [8L]

Traditional Knowledge in Different Sectors: Traditional knowledge and engineering, Traditional medicine system, TK in agriculture, Traditional societies depend on it for their food and healthcare needs, Importance of conservation and sustainable development of environment, Management of biodiversity, Food security of the country and protection of traditional knowledge.

SubjectCategory	Subjects	CreditDistribution as per AICTE (%)	Suggested Breakup of Credits (Total 160) as per AICTE	Credit & %
Humanities and Social Sciences including Management courses (HSMC)	Humanities & Social Science: (i) English (ii) Language/English Lab Management courses: (i) Principle of Management, (ii) Economics for Engineers (iii) Principles of Management (iv) Values & Ethics in Profession	5 to 10%	12	9+3 5.63%
Basic Sciences (BS)	Physics (i) Introduction to Electromagnetic Theory (ii) Introduction to Mechanics (iii) Quantum Mechanics for Engineers (iv) Oscillation, Waves and Optics (v) Semiconductor Optoelectronics (vi) Semiconductor Physics	15 to 20%	25	23 14.38%

	Chemistry Biology (i) Chemistry– I (Concepts in chemistry for engineering) (ii) Chemistry Laboratory Elective Courses (i) Chemistry-II (Chemical Applications) (ii) Polymer Chemistry (iii) Experiments in Polymer Chemistry Biology			
	Mathematics (i) Mathematics (Option 1) Mathematics 1 Mathematics 2 Mathematics 3 (ii) Mathematics (Option 2) (for CSE students)			
Engineering Sciences and Skills (ES)	(i) Workshop/Manufacturing Practice (ii) Drawing/Engineering Graphics & Design, (iii) Basics of Electrical (iv) Computer/Programming for Problem Solving (v) Numerical Methods (vi) Circuit theory	15t	24	23.5 14.69 %
Professional core courses (PC)	Courses relevant to chosen branch	30t	48	48.0 30.00 %
Professional	Elective courses	10t	18	22.5
Elective	relevant to chosen		(5 theory	14.06
	specialization/branch		5 labs)	

Open Elective	Elective Courses from other technical programs and/or mergings subjects: <ol style="list-style-type: none"> 1. Artificial Intelligence (AI) 2. Internet of Things (IoT) 3. Block Chain 4. Robotics 5. Quantum Computing 6. Data Sciences 7. Cyber Security 8. 3D Printing and Design 9. Virtual Reality (VR) 	5 to 10%	18 (4 theory & 3 labs)	16.5 10.31%
Project work, seminar and internship in industry or elsewhere	(i) PROJECT (PR....91): Project work (ii) PROJECT (PR....92): (iii) PROJECT (PR....93): (i v) Grand Viva-1	10 to 15%	15	17.5 10.94 %
Mandatory Courses [Environmental Sciences, Induction training, Indian Constitution, Essence of Indian Knowledge Tradition]	MCCourses: (i) Environmental Science, (ii) Foreign language, (iii) Constitution of India (iv) Behavioral & Interpersonal skills (v) Essence of Indian Knowledge Tradition & others as mentioned in AICTE guidelines MCActivities: (i) Induction Programming (ii) NSS/NCC/Yoga (iii) Technical Lecture Presentation & others as mentioned in AICTE guidelines	No Credit Course	Minimum 2 units per semester min. Max: 28 Units/Program	

Summary:

Sub	Credit	%	AICTE %
HSMC	9	5.63	5to10
BSHU	23	14.38	15to20
ES	23.5	14.69	15to20
PC	48	30.00	30to40
PE	22.5	14.06	10to15
OE	16.5	10.31	5to10
Project	17.5	10.94	10to15
	160	100.00	

Professional Electives (It is expected Options in a vertical column would lead to expertise in a specific/allied domain)

	Option1 (Theory and Algorithms)	Option2 (Systems)	Option3 (Data Science and Machine Intelligence)	Option4 (Applications)
Professional Elective I	Advanced Algorithms	Advanced Computer Architecture	Neural Networks and Deep Learning	Artificial Intelligence
Professional Elective II	Microprocessor and Microcontroller	Advanced Operating Systems	Machine Learning	Web and Internet Technology
Professional Elective III	Parallel and Distributed Algorithms	Embedded Systems	Soft Computing	Human Computer Interaction
Professional Elective IV	Information Theory and Coding	Ad-Hoc and Sensor Networks	Data Mining and Data Warehousing	Cloud Computing
Professional Elective V	Quantum Computing	Mobile Computing	Natural Language Processing	Cryptography and Network Security

Professional Elective VI	Advance Graph Algorithms	Real Time Systems	Data Analytics	Computer Graphics
---------------------------------	--------------------------	-------------------	----------------	-------------------

***If a student completes more than 50% course in a vertical, then it will be considered as a Specialization**

Open Electives (It is expected Options in a vertical column would lead to expertise in a specific/allied domain)				
	Option 1	Option 2	Option 3	Option 4
Open Elective I	Introduction to Internet of Things	Bio-informatics	Robotics	
Open Elective II	High Performance Computing	Image Processing	Optimization Techniques	
Open Elective III	Cyber Law and Ethics	Soft Skills and Interpersonal Communication	Foreign Language	
Open Elective IV	Human Resource Development and Organizational Behavior	VLSI	Simulation and Modeling	
Open Elective V	Professional Ethics and IPR issues	History of Science	Economic Policies in India	

Proposed Honors Courses

Sl. No.	Option 1
1	Artificial Intelligence and Machine Learning
2	Blockchain
3	Cyber Security
4	Data Science
5	Internet of Things (IoT)
6	Robotics
7	Virtual and Augmented Reality

Proposed Minors Courses

Sl. No.	Option1
1	SystemsEngineering
2	GISandRemoteSensing
3	GreenTechnologyandSustainabilityEngineering
4	SmartCities
5	BiosimilarTechnology
6	WasteTechnology
7	Robotics
8	3DPrinting

MOOCs(It is expected Options in a vertical column would lead to expertise in a specific/allied domain)						
	Sem	Credit	Op,on1	Op,on2	Op,on3	Op,on4
MOOCSCOURS E-I	III	4	Related to Minor/Honors	Related to Minor/Honors	Related to Minor/Honors	Related to Minor/Honors
MOOCSCOURS E-II	IV	4	Related to Minor/Honors	Related to Minor/Honors	Related to Minor/Honors	Related to Minor/Honors
MOOCSCOURS E-III	V	4	Related to Minor/Honors	Related to Minor/Honors	Related to Minor/Honors	Related to Minor/Honors
MOOCSCOURS E-IV	VI	4	Related to Minor/Honors	Related to Minor/Honors	Related to Minor/Honors	Related to Minor/Honors
MOOCSCOURS E-V	VII	4	Related to Minor/Honors	Related to Minor/Honors	Related to Minor/Honors	Related to Minor/Honors

**Please define your Honors/Minor programme credit point of 20 to be earned by the student.

Related BoS would endorse the selection of these courses followed by the necessary intimation at the Academic Council of the Institute.
